ORPINGTONS.

ORPINGTONS MATURE QUICKLY. My June egg proposition will interest you. Write, Angler L. Goodwin, Melrose Highlands, Mass. 6-1

REDUCTION IN PRICE OF S. C. BLACK Orpington eggs for the remainder of the season, from \$4 for 13 and \$7.50 for 26, to \$3 for 13 and \$5.50 for 26. The Black Orpingtons develop rapidly, and chickens may be hatched as late as July 19 to 15, and with good care do nicely. I have had a great egg season, and have not been able to keep up with my orders, but can now ship on receipt of order. Have also nearly 1,000 youngsters, with which my customers will win the premiums in the great shows of next winter. I shall sell none before October. Make your arrangements to secure for your flock at least one son or grandson of the great Duke of Kent, from whom my strain is named. I still have a few prize winning cockerels of last year's hatch to sell at \$5 to \$10 each. Write for chrono of "Duke of Kent." Sent free. D. N. Foster, Fort Wayne, Ind., State Vice President of American Orpington Club. 6-1

PIGEONS.

SQUAB RAISING—Antwerp Homers, Seamless Banded, are the best Squab Breeders. Seamless bands on birds are a certificate of age that can not be altered or removed without destroying either hand or the bird; they identify each bird by number, and show date when hatched. Young breeders are profitable, old ones an expense. Seamless Banded Antwerp Homers, one to three years old; five pairs, \$10; ten pairs, \$18; twenty pairs, \$34; fifty pairs, \$80; one hundred pairs, \$150. Aged or un-banded birds, half price. All charges prepaid. Free ahead express New York. Safe delivery guaranteed; deaths in transit replaced on return of band.

Birds will not be shipped C. O. D., hut orders placed with any express agent in America will be forwarded through express company's foreign departments; or remit by money order to J. L. MacDaniel, 28 B. Boite 460, Antwerp, Belgium. 4-3

J. B. Howe - W. Rock Specialist - Kentland, Ind.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

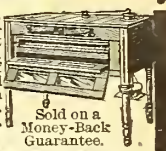

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

The Reliable's 25th Birthday

This is our Silver Jubilee year. For 25 years Reliable Incubators have represented the latest and best in incubator building. They have stood the test of practical use all this time and are farther in the lead than ever. Send for free catalog. Reliable Incubator & Brooder Co., Box A-1, Quincy, Ill.

"HOME" THE LIFE SAVER

a Free book of 32 pages on the care of poultry, and "How to Prevent Disease," Gives Symptoms, Diagnosis and Treatment. Write for it today. Dept. M. CUGLEY & MULLEN 1229 Market St., Philadelphia, Pa.

HOW TO GET MORE EGGS

Help your hens. Feed them fresh cut green bone and you'll get more eggs—you'll get eggs in winter when eggs are worth while. The Standard Green Bone Cutter prepares bone right for feeding, quickly—easily. Prices \$8.50 and up; sold on guarantee—sent on trial. Write for catalog. Standard Bone Cutter Co., Milford, Mass.

THE HANDY HATCHER

Proves that many old incubator ideas are wrong, and that our new application of Nature's Method is exactly right. We'd like to tell you why this machine knocks on these old theories, and how it hatches just like a hen. Write today for free catalog. HANDY HATCHER CO., Box A, Rossville, Ill.

ROOF FREE BOOK

Illustrated ROOF BOOK, just off the press, tells how to lay durable, water-proof, weather-proof and fire-resisting roofs on residences, barns, cribs, poultry houses, outbuildings, stores, etc. How to cover old shingle roofs. No tools necessary but a knife and a hammer. Tells all about the famous

NO-TAR ROOFING

which is better and cheaper than shingles, slate or tin. Water-proof, fire-resisting and acid-proof. Contains no tar but is made from asphalt and cannot dry out or run in the sun. Flint-coated, flexible and easy to lay. Best dealers sell NO-TAR ROOFING. Special nails and liquid cement FREE in every roll. When we send you the Free SAMPLES TO TEST, we will tell you TEN WAYS TO TEST IT and PROVE its superiority to any other roofing.

DEALERS—Write for our Roofing-Business Promotion Plan. Address THE HEPPE'S CO., 2431 Fillmore St., Chicago

You Want a Substantial Poultry Fence

One that will not yield and tear when it receives a little extra strain, which is bound to happen occasionally, especially where poultry yards adjoin barn lots. Advance Poultry fence is strong enough to turn any farm stock. Nor is this strength wasted because it means long life—4 or 5 times as long as poultry netting or light poultry fence. Considering the extra posts and railing needed for poultry netting, Advance Poultry fence costs no more than netting. To sum up, it is several times as strong, lasts several times as long and costs no more than netting. Therefore Advance Poultry fence is the most practical fence for poultrymen.

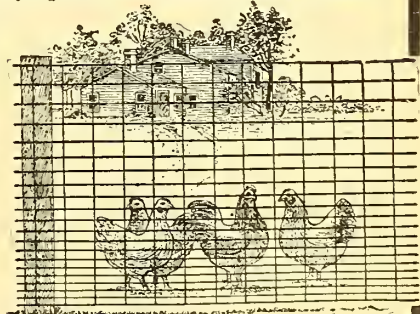

Advance Poultry fence is of the same high-grade construction as our famous Advance Farm Fence. All whole wire, no short pieces used. Our stay wire is NEVER cut, but runs continuously up and down across the fence for many rods without an end. Thus we preserve and utilize ALL the strength and service there is in the wire, fully half of which is wasted in cut stay fences—sacrificed to convenience and speed in manufacture. When fence made of WHOLE WIRE costs no more, why buy fence made of shorts?

Sold on Approval. We want you to see and examine Advance Fence—to compare its construction with others. Let us ship you what you need on 30 days approval. After a careful examination, comparison and a thorough test, if you wish you may return the whole business, and it won't cost you a cent as we will pay the freight both ways and refund every cent you paid. Our long experience with Advance fence gives us the confidence to make this liberal offer.

We prepay freight and guarantee the safe delivery of your shipment. Write today for our Free Fence Book and Freight Paid Prices.

They Win by a Mile at the World's Greatest Shows Greystone's White Ply. Rocks and Black Minorcas

At Madison Square Garden, 1907, just held, White Rocks being the banner class, it being the White Rock Club meeting, we won 14 points more than the next highest competitor. Made a sweeping win at Madison Square Garden, 1905, winning 8 out of a possible 10 first prizes. Cup for 2 best cocks, 2 hens, 2 cockerels, 2 pullets and 2 pens, best display, whitest male, best shaped male, champion male. At Boston 1906, ahead of all competitors, winning the display special on both varieties. A few grand breeding and show birds for sale, also eggs from all our winners. Send for mating list. GREYSTONE POULTRY FARM, F.H. Davey, Mgr., Yonkers, N. Y.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequalled in standard qualities. Remember that we are the originators, and for over 30 years specialty breeders of the justly celebrated Wyckoff's S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. Eggs for hatching in any quantity from the grandest of matings at \$2 per 15, \$3.75 per 30; \$5 per 45, \$10 per 100. Catalogue and testimonials free.

WYCKOFF'S FARM, - - - Aurora, Cayuga Co., N. Y.

Young's Strain S. C. W. Leghorns

I Have No Other Breeds

Have no equal as egg producers and as their record show they are in a class by themselves as an exhibition strain. All eggs one-half price after June 1st. Mating list free. Stock for sale at all times. Address

BANNER CHICK FOOD

NO GRIT OR OYSTER SHELLS

This is a complete prepared dry food for chicks from the time they break out of the shell till they can take corn, grain, and grit. All they need is plenty of fresh water and Banner Food to develop strong, healthy fowls. Banner Chick Food is composed of the exact and proper elements to produce best results in growth, as well as economy in buying. It is composed of kiln-dried Corn, Oats, Barley, Rice, Peas, Millet Seed, Beef Scrap, Charcoal, Beans, Flaxseed, and a variety of other seeds which are really the "back-bone" of the feed. If you want prize winners start your chicks on Banner Chick Food and you simply cannot miss. Order to-day. Price—1 lb., 8c; 3 lbs., 15c; 5 lbs., 20c; 10 lbs., 35c; 25 lbs., 75c; 50 lbs., \$1.35; 100 lbs., \$2.50. Write for complete catalogue of all poultry and pet stock supplies.

EXCELSIOR WIRE AND POULTRY SUPPLY CO.

200-EGG INCUBATOR \$12.80

This perfect 200-egg Wooden Hen at \$12.80 is a startling trade innovation. It will do the work of the most costly hatcher, and always keeps in order. Hatches every fertile egg. Catalogue with fourteen colored views sent free. GEO. H. STAHL, Quincy, Ill.

VIGOROUS CHICKS

are the results of **Petaluma Incubators.** They maintain Nature's conditions. They have no accidents, make no failures. Catalogue free.

PETALUMA INCUBATOR COMPANY,
Box 150 Petaluma, Cal. Box 150 Indianapolis, Ind. We pay freight in the U. S.

NATURAL HEN INCUBATOR

200 Egg Size for **\$3.00** Insures pure air, correct temperature through natural Hen heat. No lamps to smoke or regulators to adjust. Hen instinct controls the whole hatch from beginning to end; therefore, you get better results from your hatch.

Agents Wanted. Catalog FREE.

Natural Hen Incubator Co.,
B-4, Columbus, Nebraska.

THE OIL THAT'S RIGHT

Is the only kind you should use in your incubators and brooders. Many chicks are killed by the deadly fumes from ill-smelling, gummed-up, smoky lamps.

WYANDOT WHITE OIL

is refined by special process, goes through the wick without clogging and burns with a steady flame preserving even temperature. Write for free circular and price.

THE WYANDOT REFINING CO.,

WHO IS THE JUDGE?

A sample of many letters received by us:

Dec. 8, 1906.
Steinmesch Feed and Poultry Supply Co.,
St. Louis, Mo.

Gentlemen:—I have 200 matured hens and pullets, and yesterday collected six eggs. I have been using **gritless feed**. It does not produce results, and I will have to go back to the old reliable Steinmesch Select Hen Feed."

STEINMESCH Select Hen Feed

contains grit. It is a balanced ration. It's the best chicken feed that money, brains and experience can put up. It will make hens lay when all other feeds fail to produce results. No cheaper than other feeds, but better. Price \$1.75 per 100 lbs. We pay freight on 200 lbs. everywhere.

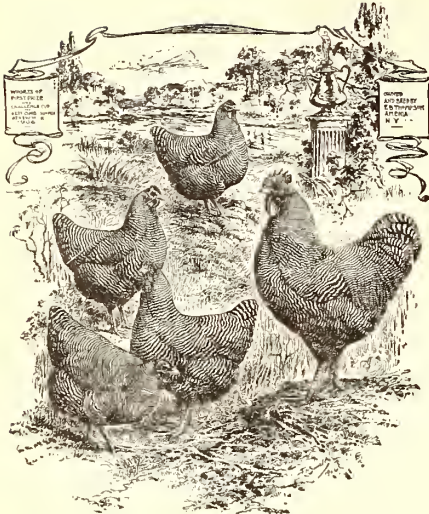

Steinmesch's Feed & Poultry Supply Co.
301 Market St., St. Louis, Mo.
Our catalog is free to all. Write for it.

MONEY PLANTED WITH ME GROWS

You can buy baby chicks for less money than good eggs cost. Leghorns, White and Brown, Rocks, White and Barred, Wyandottes, White, Minorcas, Black. Send for circular.

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.
 Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Pembroke, Maine

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

1907 CHICAGO WINNERS

We won on S. C. Buffs 1st, 2d cock, 2d, 3d chl., 2d, 3d pul., 2d, 3d hen, 1st pen, silver cup best display, silver cup best colored male, silver cup best colored female; all firsts on R. C. Buffs. On our S. & R. C. Blacks and Whites we won 10 firsts and 8 seconds. 1907 egg circular free.

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50. The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 28 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains. If the Brooder is ordered with the incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the incubator delivered west of the Rockies is \$9.90 and the incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented. If you want a larger machine write for our 89-page "Victor Book".

THE PRAIRIE STATE BROODER

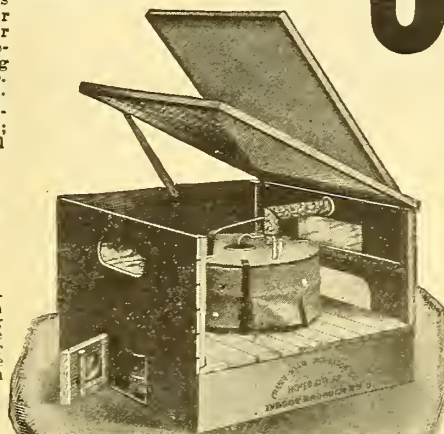

A Spring, Summer or Winter Brooder House

If you have not investigated the **No. 5** **Prairie State Brooder No. 5** you ought to get busy because it is one of the most satisfactory brooders ever made. It is portable making it desirable for use in any kind of a poultry house or as a colony house on the open range without any change. Being enclosed (see cut) it can be used as an individual lamp brooder in colder localities than the plain Universal Hoyer can be alone. Top is covered with a removable Cloth Screen instantly changing it from a winter to a summer brooder. Hoverlifts out making it easy to clean. Consumes but little oil; supplies abundant ventilation even in hottest weather; top affords sun shade. We can't tell all its good features here—

Get Our Brooder Catalog

showing it in several forms and describing its many useful adaptations. With the No. 5 chicks can be raised during June and July unusually successful. We will also gladly mail our 1907 Incubator catalog which tells why the Prairie State batches extra large, strong chicks with greater ease and certainty.

THE CYCLE HATCHERY

879 North Leavitt St., Chicago, Illinois

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used straight from our own factory.

Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated as shown in illustration, sheets 22x24 inches, \$1.65. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the

interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

We will supply you with a fine, ceiling, as traction, all put up at 100 square feet. They are 24 inches wide and 6 long. They are excellent. Nothing up an old more than some brick makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building.

We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices to these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron

BRICK SIDING, \$1.95

pipe and fittings, plumbing supplies, nails, etc.

Guarantee is back of all we sell.

VASS' BUFF, BLACK AND WHITE ORPINGTONS

Acknowledged the worlds best. I will offer eggs from my noted strains of Orpingtons, balance of season at greatly reduced prices. Also this year's breeders at bargain prices to quick buyers. C. E. VASS, Washington, N. J. Write for prices to-day, circular free.

The Acme Trap Nest

Traps the hen without effort upon her part, the act of the hen walking into nest closes the door, the door being flexible and light closes without noise and does not frighten the hen. There is no danger of injury to body or plumage of the hen, even to break a feather. Takes less room than many and no more than any trap nest made. Simple and sanitary in construction and very easy to operate. Taken apart to clean by removing lid. All working parts come out with lid, therefore making it easy and quickly cleaned. No weights, pulleys, springs or wires for hen to push against to throw trap. Just like any open nest. Hen has no more to do to use the Acme than an ordinary nest. It is durable, well ventilated roomy and comfortable. Catalogue free.

The ACME TRAP NEST COMPANY, - Bedford, Indiana

THE MATING OF THE BREEDS.

The Single Comb Rhode Island Red Could Be Advanced Very Rapidly, So Far as Color and Shape are Concerned, if the Indiscriminate Use of Cockerels and Pullets as Breeders Was Stopped—The Effect of Breeding From Unknown Quality a Serious Matter—Stock Which Has Come Through the Adult Moults Shows Its Quality—Some of the Simple but Important Kinks of an Emimently Successful Breeder and Exhibitor.

Paper No. 7—The Single Comb Rhode Island Red.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

In the now exceeding strong competition for show honors among Rhode Island Red breeders, the stock which has been bred from parents of known quality is found winning the honors for its owner. When a new breed takes on the popularity, as has the Rhode Island Red, hundreds of fanciers all over the country become interested in the breed by the purchase of a trio or breeding pen, and in a large majority of cases the stock thus purchased is young stock—cockerels and pullets. Now, it is bad enough, unwise enough, to build the foundation of a thoroughly established breed of fowls of stock of unknown breeding quality. To do so with a new breed, one not yet perfected either in color or shape requirements, is the height of folly. Mr. Lester Tompkins, the most successful exhibitor of Single Comb Rhode Island Reds in America, here gives breeders of this fowl some facts which are of the utmost importance. Mr. Tompkins says:

As to the proper mating to breed Rhode Island Reds to produce ideal birds, it is the old story in a measure that like produces like, but as in other breeders, if you know your blood lines and what is back of the birds to be mated, you have more of a guide in guarding against defects.

To a beginner, in selecting females for breeders, I like hens best, but a novice is very apt to get deceived in his bird, as often after the moult, the very best ones, owing to condition at moulting time, will not appear to be the birds they really are. Many times just an ordinary hen will moult out bright and even, while a very fine colored bird will moult gradually, and by the time they are through some feathers will be practically old, others bright and rich, which will give her a very ordinary appearance. I do not mean to say they are all this way. While she may be far more valuable in the breeding pen than the smooth-looking one, still would not be considered by a novice in mating up his pen. Oftentimes the next season she might come out even and rich as when a pullet. Of course, one that holds color year in and year out we prize very highly. To the female we look for shape, size and Rhode Island Red characteristics. Also select as good head points as possible.

On the male bird depends color, to a great extent, also stamina, while a great deal depends upon surface color, as that is always in sight. Still, I think undercolor quite important as to breeding qualities. It may not always be

the cleanest, purest colored or the darkest, but strength and richness are important.

Don't mistake my meaning of strength and richness, as it is not always the darkest bird that is richest. If a bird has pure undercolor and brilliant surface, very good. Sometimes a rather light male that is rich and bred from dark birds makes the best breeder. Avoid making extremes in color between male and female. If, as many say, my pullets run light, it is safer to darken by degrees than to attempt doing it all in one season by using an extremely dark male, as this is one cause of unevenness of color in the flock.

Line Breeding.

Line breeding is good, when properly carried out. Is all right for bringing out certain requirements; also fixing some of the points desired. One should thoroughly understand line breeding and Rhode Island Red characteristics before attempting it to a very great degree, as this breed was made by outcrossing for many years.

Outcrossing.

It is well known that Rhode Island Reds are the results of from sixty to seventy years of outcrossing, which has been the main factor in producing great strength and strong constitution and laying qualities, which are some of the principal points that have brought Rhode Island Reds to the present popularity. This feature cannot be overlooked to maintain ruggedness, but same as line breeding, one should be careful, as it is best to know your lines.

I think these points must be considered in maintaining the old-time vigor and hardiness of the breed. We often hear those good old-fashioned Red birds spoken of, which I believe can be produced today as good and better, if one will stop and think to use care in mating.

Get the old-fashioned type (which is a type that no other breed can claim) fixed in your mind, then learn the true color and stick to it, but do not take birds which were produced by accident and expect to breed standard birds in one season.

MONEY IN POULTRY.

Show me a man that has a substantial, well-kept poultry house, filled with pure-bred poultry—it matters not so much what breed—and I will show you one that is thrifty and prosperous; that pays as he goes, and has no long-running store account that always foots up about 100 per cent more than he expects it to. Personally, I have found the Leghorn and other non-sitting breeds the most profitable, as there is more money in eggs than in raising chickens, unless one has the time to give them much care. As a breakfast food eggs are unsurpassed. They are appetizing and nutritious, and more satisfying than many of the cereals in common use. Being easily assimilated, they are almost indispensable as a food for invalids, if taken in the raw state. They add a rich flavor to the coffee for breakfast, play an important part in the cake and ice cream for luncheon and in the puddings for dinner. For Sunday dinner, or when the unexpected guest arrives, the farmer's wife can have a roast or chicken pie fit for a king, and still be independent of the butcher. And so in one way and another the hen adds her mite to almost every one of the 1,095 meals to be gotten up during the year. I have always tried to raise turkeys enough to buy many of the family's supplies for winter, and have rarely been disappointed. To be successful one must be painstaking, for the little turkeys are very tender. They should be kept in perfectly clean quarters until the sun is well up and the dew gone, and

then be allowed to roam at will the rest of the day, as they will not bear long or close confinement. I much prefer the bronze breed, but living in a neighborhood where the chief industry is the raising of grapes and berries, I am obliged to keep the white Hollands, as they will not wander so far, and I like to live in peace with my neighbors. I have found no better feed than curd, made from thick, sour milk, set on the back of the stove and warmed, just enough to separate the curd from the whey. I am very particular to feed them at night, and they will soon learn to come up after their feed.

Turkeys should be well fattened on corn in the fall, so as to make of them what the buyers would call a fancy article, if one wishes to get the top price. If they are picked as soon as killed they will need no scalding, and in that case the feathers may be stripped from the stem on either side and made into pillows that will excel in softness those made from ducks feathers. While speaking of ducks, I will tell you of a mistake I made. I tried to feed some young ones without having a dish of water setting by them and two of them choked to death on the spot. Truly, "experience is a dear teacher."

Carlton W. Trickey.

Bristol Springs, N. Y.

DEFINING THE AGE OF POULTRY.

In France They Have Several Methods Whereby They Determine the Age of Fowls—Telling the Age by the Renewal of the Wing Feathers.

Written for American Poultry Journal by Special Correspondent.

Nothing is more necessary than to know the age of poultry, while, nothing is more difficult than to ascertain such an important fact precisely. Young birds are everywhere in request. For breeding purposes it is a serious and weighty matter to settle, and it is equally so from the table point of view. In the case of an established breeder of poultry, his character, or social standing, affords a sufficient guarantee for the age which he gives to his product; but the subject is not so easy for commission merchants, who have to purchase poultry right and left for the table requirements of the market. Studious attention and vast experience will create the ability required to rapidly seize or grasp the precise and decisive points of the necessary recognition. Some general characteristics about the birds are, however, necessary to bear well in mind. For instance, a hen that lays abundantly towards the age of two years declares the full extent of its laying power in the third year; it does not repay its keep during the fourth year unless the bird is allowed to enjoy complete liberty and to pick up its own food in large quantities. It often happens that at this age it will give satisfactory results. The cocks can live till ten; it is much more advantageous and practical to sacrifice them while in their third year and before they become unfit for alimentation, as then the flesh is dry, leathery and indigestible. At four years old, the cock is considered defective for reproductive purposes; consequently, it has no right to be kept longer than the second year, unless it be an exceptionally valuable bird. In the broods there will always be a sufficient supply of young cocks to replace the old ones.

For instance, a cock born in the month of March will be kept separate from the hens, and if he be well fed he can be fit for reproduction when eleven months old. By thus replacing the cocks each year the birds that have been suppressed will have hardly reached their second year. If the discarded cocks be left in absolute repose during a fortnight and liberally fed with farinaceous food they will turn out to be fair table poultry; but on condition that they be not served roasted. Breeders adopt some methods for the recognition of the age of poultry which they rear. Thus, in the first year, they cut the hind nail of the right claw; for the second year the pullets have the nail on the left claw filed down. In case it be required to indicate or mark a third year, the second nail on the right claw is cut. The removal of two nails from the claw detracts from the appearance of the bird. Certainly the nails were not destined by nature to be thus removed. There exists still another plan of marking young birds, but the practice is somewhat cruel; this consists in searing them on the wing with a red-hot iron. Other persons recommend marking the skin by means of an appropriate stamp and indelible ink. The plan is practical, though long. M. Elloire, a veterinary surgeon, has adopted the system of spiral rings in india rubber, placed on the birds' legs; these rings are of various colors; a different

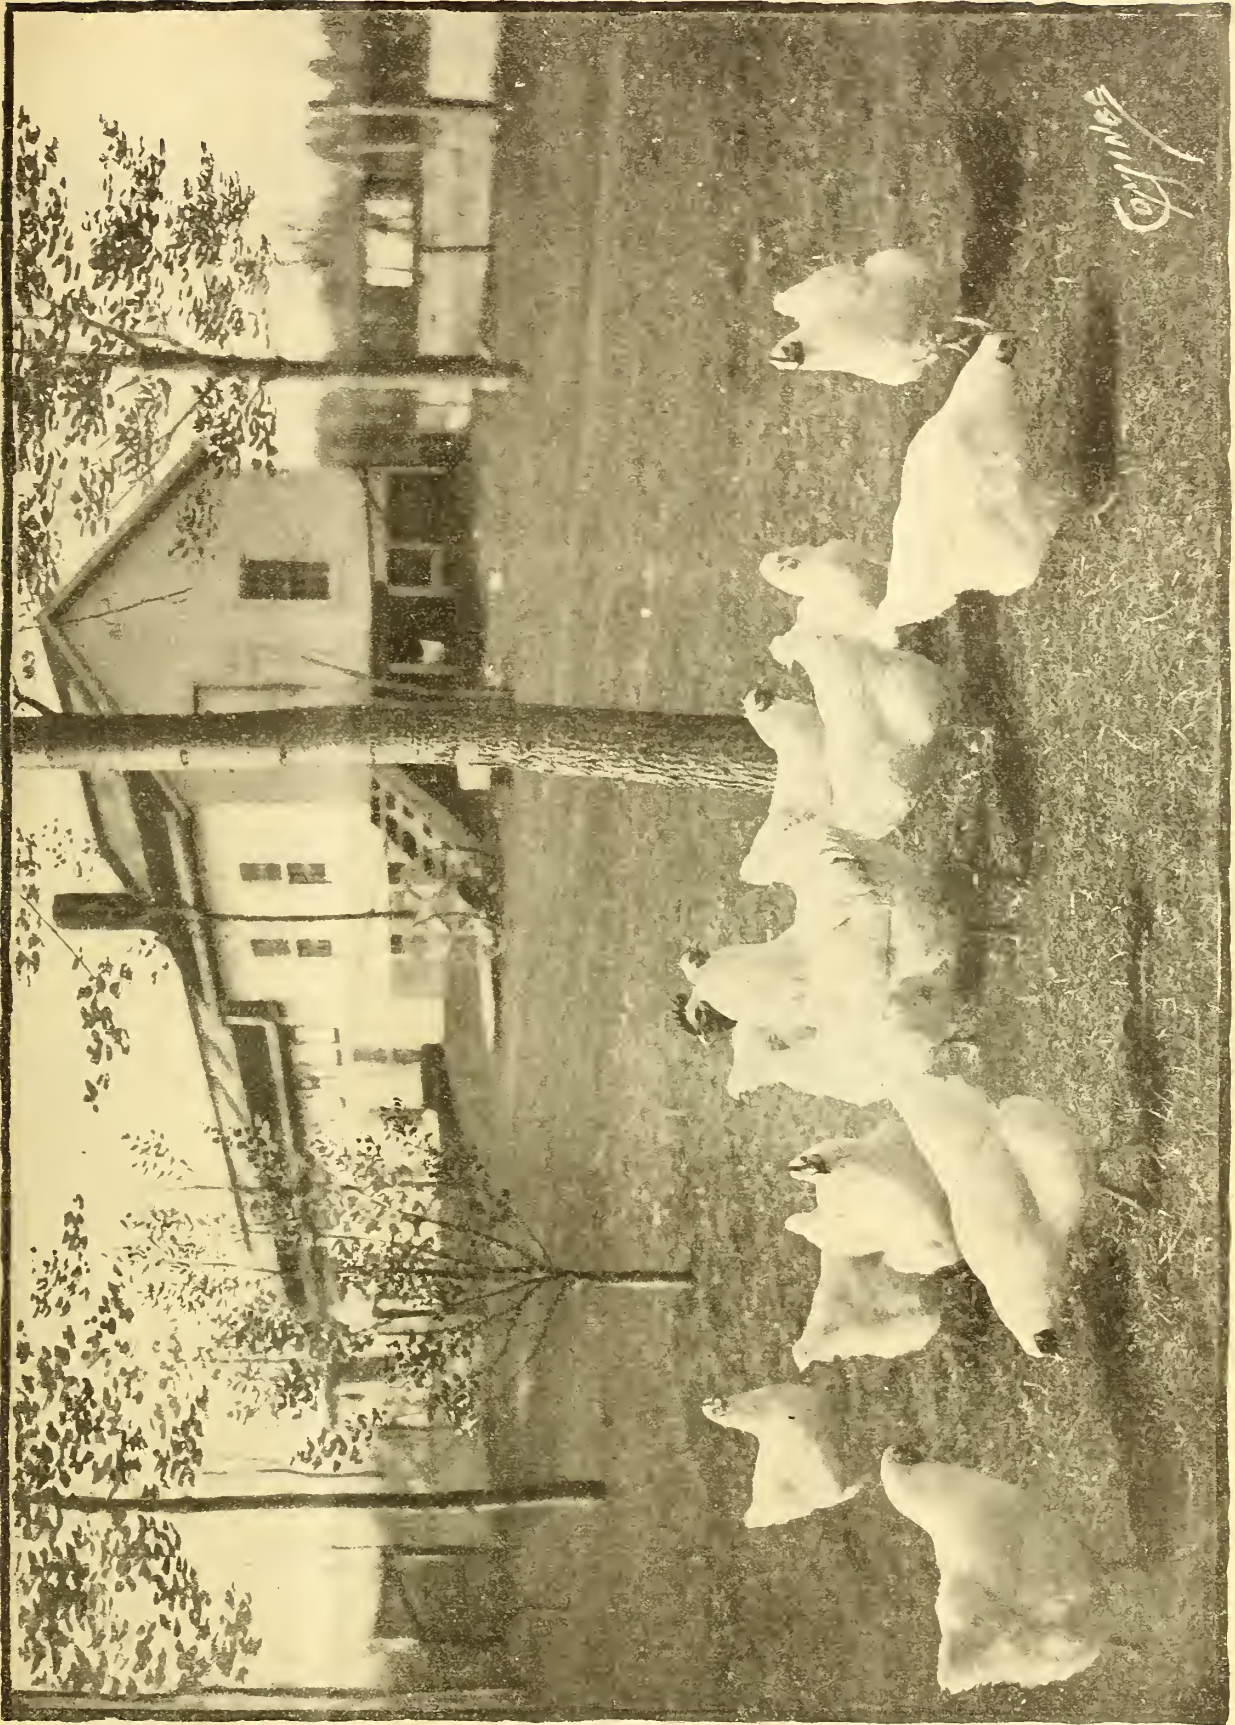

color for every year is employed. The age of the bird can by this simple, harmless and practical method be thus ascertained at a glance. All these systems are more or less excellent for rearers of poultry; but this is not the same in the case of poultry purchased elsewhere. In this instance nothing but personal ability and experience can enable the buyer to distinguish an old bird from a young; however, it can be effected by inspecting the claws.

In the case of young birds, the skin of the claw is supple, and the scales thin and brilliant; if older birds, the skin is coarse and strong, while the nail of the last toe is very much worn. Further, in the case of young poultry, the down underneath the wings is long, soft and distributed over the surface of the skin with a great deal of regularity. Small blue veins are also discernible upon the skin, which is both delicate and rose colored. A bird aged more than one year old has no more down; nor are the small veins perceptible under the skin, for the simple reason that the latter has become dry, devoid of luster, thus recalling the appearance of flour. As regards pullets that have not yet begun to lay, the bones of the pelvis, or basin, almost touch; whereas, in the case of fowls that have commenced to lay, the bones in question are very far apart. Besides, old poultry, whether cocks or hens, have wrinkled eyelids, while the look on their face is a little shriveled. These indications are very plain with respect to old birds. The late Professor Cornevin was able to fix very accurately the age of cocks by means of the dimension of their spurs. Thus, in the case of common breeds, the place of the spur is simply indicated by a scale larger than any of the others; between four and a half and five months the scale seems to bend a little, while forming a slight and light point in the center; at seven months the spur measures three millimeters; at twelve it is 15 millimeters long, and very straight in shape; at two years it is 25 to 27 millimeters, the spur displaying a slight curve at the same time; at three years of age the length is 36 to 38 millimeters and the bend clearly upwards; at four years the spur is 50 to 54 millimeters, while at the age of five years it measures 62 to 65 millimeters in length.

In such races as the Dorkings and Houdans, that have five toes, the spur is situated higher up; in the case of the Cochins and Brahmas, which have feathered feet, the spurs are shorter, more bulky and not pointed, while at the age of three years they are not more than 20 to 27 millimeters long. Fighting cocks have, of course, the best developed spurs, which are straight as well as pointed. With Bantams, their spurs are so short as to be almost undeveloped, so that they cannot afford any indication to judge their age. There is still another method in vogue for the purpose of calculating the age of both sexes of fowls, which is based on the renewal of the wing feathers. This process of renewing follows an invariable order. The feathers for flying are the coverings for the wings attached to the shoulder, which are the smallest in size; the secondary feathers grow on the bones of the forearm, the primary feathers being situated at the extremity of the wings. The renewals of these feathers, known as le remilage, or moulting, are for the young, as compared with the adult, sharply pointed. It is the large interior feather, most frequently near the body, which is the first to fall, and is the tenth one in counting from the most external feather. The moulting then continues from the inside to the outside. But the primary feathers on the wing remain until the moulting time of the following year. As in the cases of young pheasants, the moultings of the pullets are never replaced before the end of the fifth month, and even during the sixth very often; the pullet has had by then two replacements of the primary feathers in the wing. For the several moultings, allowing twelve days on an average for the development of a feather, and thirty for the last and definite stage, six months may be fixed as being the necessary time required before the pullet possesses all her permanent feathers. M. Schutzenberger, of Strausburg, has remarked in the case of young pheasants, and the same remark equally holds good for pullets, that after the first definite moulting the wing feathers are always sharply pointed, and that when the second remilage arrives—that is, in the following year—the precise age of birds can be accurately known during a period of two years. By attentively studying all these points poultry-keepers will be secured good and profitable fowls.

Now is the time to dispose of your surplus breeding stock. Reduce the price and move them quick, and thus save the cost of feeding them through an unprofitable period.

Give your chicks free range wherever it is possible. It will help to make them strong and hardy.

A breeding yard of U. R. Fishel's White Plymouth Rocks. Is there any wonder the U. R. Fishel White Rocks get better each season when such mailings as the above are used by him. This photo has not been touched by the artist, so shows the excellent Fishel quality. Note Mr. Fishel's ad in this issue. It will interest you.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Fred W. Kazmeier, Elkhart, Wis., and the second prize to I. D. Allen, Chicago, Ill.

THE CARE OF THE SUMMER CHICK.

The cold spring has delayed the hatching, and as a result there are a great many chicks hatched in June and even the latter part of July.

To bring to maturity these late hatched chicks means extra care and work. There must not be a single day during the entire life of the chick in which it does not receive the best of care.

The most important thing to remember in raising late

"GETTING ACQUAINTED."

Photo taken at the home of H. M. Philbrook, 6140 Lexington avenue, Chicago, Ill.

hatched chicks is to feed them so as to make the greatest growth possible without injuring their digestion. In order to accomplish this food rich in protein should be fed. Protein is the chief frame-building material and is therefore of first importance.

The next important thing is the question of warmth. Little chicks need warmth in June and July as well as in spring.

As to feeding chickens, I have found from my own experience that a mixture of equal parts of rolled oats, bran and middlings, with just enough of sweet milk to make it moist, not sloppy, is very good. I think there are more chicks killed each year by feeding too sloppy food than by all other diseases taken together. Feed the little chicks all they will eat up clean every two hours. Early cabbage or a second crop of clover or alfalfa can be had at this season and should be supplied plentifully.

A large run separate from the early hatched chicks should be provided for the June youngsters. The orchard is an ideal place for them; it furnishes shade and shelter.

Roomy coops should be provided for the summer chicks. Coops 6x4 will accommodate twenty-five chicks until 10 weeks of age. Don't put more than twenty-five in a flock if you want to make a success of late chicks, and be sure to give them their first feed at daylight and the last as late as it is possible to give them.

Finely cut green bone is an excellent bone-making food,

but should be fed sparingly, so as not to induce bowel troubles. Fresh water must be given them in generous quantities if success in late hatched chicks is what you desire. See to it that plenty of green food is at hand in fall, because this is one thing that sets back the late hatched chicks.

Crowding retards growth as much as unintelligent feeding. Perfect cleanliness is the keynote to success. Never allow the droppings to accumulate. Their coops should be well ventilated.

Last, but not least, keep a continual lookout for lice, which is the greatest hindrance to late chicks. Dust them with a good insect powder every week throughout the entire summer.

All these small items are the secrets of raising late hatched or summer chicks to maturity. Fred W. Kazmeier.

Elkhart, Wis.

MORE POULTRY AND EGGS AT OUR POULTRY SHOWS.

As our poultry shows are becoming larger and better every year, there is still one great exhibit that is lacking, and that is the need of more poultry in different shapes. If any of the readers of the American Poultry Journal were at the dairy show, held at the Coliseum February, 1906, and saw Swift's exhibit of dressed poultry, it was certainly a fine sight. He had live poultry in all sizes of Barred Plymouth Rock. He had dressed poultry in boxes, dressed poultry on platter, baked poultry on platter and some carved up ready to serve. Now, if our poultry shows gave us more exhibits of dressed poultry of all varieties what a fine sight it might be. How many times do we hear the question asked, What kind of skin does the Barred Plymouth Rock have, and what color is the shell of the egg? Or what color is the skin of the Buff Orpington, or what color egg do they lay? Or is the skin of a Black Minorca white or brown? or a hundred other breeds that are on the market. One will hear that question asked every day, as I have been asked that question many times. Also the eggs. We need an exhibit of all different breeds of poultry eggs, so one could see the different colors of the egg shell. Now, you may be posted on the color of the skin and the color of the eggs of all poultry, but how many hundreds of people that attended the poultry show held at the Seventh Regiment Armory last January that don't know and are not posted on that point? And I believe there are some people in the poultry business to-day that can't tell the color of the skin and the shell of the egg of every variety of poultry that is on the market. I would like to call your attention to the display of Indian Runner duck eggs that J. C. Knapp displayed at the Chicago show January, 1907. Right at the end of his row of coops he had a glass showcase of duck eggs formed in a square, and they were all of one color and one size. It was worth one's while to view that showcase of eggs, and if we had more of such showcases it would be a fine exhibit at our shows and a big study for the new beginner.

Now, you may be just starting in the poultry business, and you have read the poultry journals. You have sent to the experimental stations for bulletins to get a record of the best layers; you have gone to the poultry shows. You will hunt up the fowl that you have decided to raise and you will find the fowl you fancy. You will remark: "What fine birds they are." But you have only seen the feathers—a great big bird with lots of feathers; they look fine, but you haven't got down to the skin to see whether it is a big meaty fowl or all bones. We must raise fowls with good bone; but they must be good meaty stock to bring a good market price.

Now, again, one might think that dressed poultry at our shows would be too costly an exhibit, as they would have to be in a refrigerator. But I don't think they would, as our poultry shows are all held during the winter months. Then, again, we could have a separate room from the other exhibits, and where an even temperature of about 50 degrees Fahrenheit may be attained. Then, again, an exhibit of dressed poultry and table eggs seem naturally a part of a poultry show; and our poultry shows will never be complete until we have a full display of all varieties of both live and dressed poultry, and eggs. I. D. Allen.

Chicago, Ill.

Try sassafras poles for perches. Lice will not stay around where sassafras is used in any form.

A little extra attention to your breeding birds this month will be well repaid with fertile eggs.

THE PRODUCTION OF WINTER EGGS.

Early Hatched Birds are Necessary—June and July Hatched Chicks Will Never Make Profitable Winter Layers—Proper Feed During the Growing Period is Essential—The Folly of Forcing the Breeding Stock.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Maine

Winter eggs are the profit-makers of every poultry farm in the country, whether the farm is run on a large or on a small scale, and to obtain winter eggs is a constant study in which many minds find employment, but a good many minds do not seem to realize to the full extent that the procuring of winter eggs must be begun in time and that it is too late to begin to feed for winter eggs when the cold and the snow are with us, and so for this reason it will not be too early in the season to bring before the poultryman the necessity of summer attention to his stock for the production of the much-coveted winter eggs.

It is, of course, necessary to have fully mature birds to begin with, as June and July hatched birds will never be profitable as winter layers, whatever may be said to the contrary; sometimes a precocious pullet may start in laying at four months' old, but this is a rare exception, and the poultryman cannot base his profit on exceptions, but on a well-planned expenditure of time and methods that as a whole will prove profitable.

Many valuable lessons have been taught us by the experimental stations, and one in particular has been forced on our attention, namely, that there are a great deal of exaggerated statements abroad regarding the laying capacities of fowls, but that all of them are based on exceptions rather than the average productiveness of the flock.

The main purpose in view at most of these stations has not been to establish a strain of birds that would lay 300 eggs a year, but to make an average of twelve dozen eggs a year per hen in a flock of 100, and this, if permanently established, will be of the greatest consequence to the poultry industry.

It has also been shown that the male bird plays a very prominent part in the laying capacity of the flock, for, except he himself comes from a strongly productive female, the work of establishing a flock of good layers will be greatly handicapped.

To secure the best results in the production of winter eggs it is, as already hinted, necessary to give the pullets all the proper care they need during the months of growth, and, above all things, try to secure the most robust females in the flock, and without pity discard all the weaklings and the "standstill" specimens that do not seem to make progress in growth as rapidly as they ought to do with the care needed.

Separate all the pullets from the cockerels and give them good, roomy and airy (not windy) houses to roost in at night, and to do this successfully have screen doors made on all houses of one-inch wire netting, which will give the opportunity of a closed door at night, but at the same time open, which is practically as good as roosting outdoors, and at the same time protection is given from night prowlers of any kind that may happen around.

At this time the pullets should be fed a ration that will be not only a flesh and muscle former, but containing enough matter so as to stimulate early laying, for at this time the pullets, at an age of three months old, have from two to three months to get ready for their first egg, and we like to have that come in September and October, for the birds that begin laying in the fall will make our best winter layers.

A good method to pursue is to watch out for all the females that show signs of early productiveness, such as red comb, increased activity, considerable singing and prating, to separate them from the rest and put them on the regular ration given to laying hens.

One of the best rations ever propounded and that has given us the very best results is the rations given by Gilbert M. Gowell, of the Maine Experiment Station, which are as follows:

For Growth Up to Time of Separating the Sexes.

Two parts good clean bran.
Four parts cornmeal.
Two parts white middlings.
One part linseed meal.
Two parts beef scraps.

This ration is fed from the time the chicks leave the hen up to the time of separation, three times a day, beside the

regular supply of scratch food, such as cracked corn, wheat and other small grain. The next ration is to be given to the pullets after they are separated, and this is fed all through as a laying ration, and has been productive of the most excellent results.

This second ration is fed dry and kept before the pullets at all times, and in the morning cracked corn and oats are fed in litter and another supply about noon. It must, however, be taken for granted that the same ration can be fed as a mash where it is desired, but there is less work and as good results by feeding it dry:

Fifty pounds wheat bran.
Twenty-five pounds cornmeal.
Twenty-five pounds middlings.
Twenty-five pounds gluten meal.
Twenty-five pounds linseed meal.
Twenty-five pounds beef scraps.

This ration, as well as the other, is easily compounded and the material that goes into it easily obtainable almost in any village throughout the land, and inexpensive, and, moreover, the rations on which all the great egg records have been made on the station.

A word here may not be out of place—namely, that it is utterly useless to place any credence in the so-called "egg type," as our own experience has proven to us conclusively that no type can be relied on to produce more eggs than any other type, any more than that an egg of a given shape will produce a pullet and one of another shape a cockerel, and our own experience has been backed up by almost every poultryman of our acquaintance, and the trap-nest proves these conclusions to be true.

Mr. Gowell states that he has eighty birds in one yard at the experiment station; that each one of which has laid from 200 to 251 eggs in a year, and they differ sufficiently in type to upset any theory based on the selection of a certain type of fowl as the best producers.

The trap-nest is our best and most reliable source of positive information on the number of eggs each female will lay during a given time, always taking into consideration that your own observations are at least as reliable as those of others, providing they are obtained by careful study and experimenting.

Forcing the Breeding Stock.

The greatest folly that any breeder of fancy poultry can be guilty of is to force his breeders for an increased production of eggs, and in many instances at an age where the bird is not fully matured and not ready to lay but by means of forcing.

It is all right to get as many eggs as possible from the birds that are kept for this purpose, namely, for laying only, but where the breeding of standard poultry, with a view of future exhibition birds is the intention, size is, of course, a third of what goes to make up a bird fit to exhibit; for the great three parts are size, shape and color.

Now, if a bird is forced to begin to lay before it has obtained its proper size, shape will, of course, be endangered as well, and when a pullet begins to lay she will also stop to make growth. We may fatten her and fill out her body, but no man on earth can give proper size of bone and framework to a female whose growth has been interfered with by giving undue attention to the stimulation of the egg-producing organ of her anatomy.

Let the growth proceed at a normal rate and by feeding a normal ration and by giving plenty of liberty wherever it is possible to bring out all the symmetry and fine lines there are in her; let her begin her laying when she gets ready for it herself, which, without forcing, will be when she is six or seven months old, the time it takes to properly mature a fowl, and the best six months are those that begin with March or April.

Then feed rations entirely composed of dry grain; let her work out every kernel of the scratching material, and under conditions where there will be plenty of good dry air.

Give her plenty of water, grit and shell, and green food of some kind, and with this treatment, though she may not lay as many eggs as when a record is the only consideration, she will lay enough to make herself profitable, and when she is to be used as a breeder she will not start in with a system in which the egg-laying organs are overworked, but in complete trim to produce strong, hatchable eggs that in turn will produce chickens that have come to stay.

All the trouble with eggs that will not hatch well, and when they do hatch will only hatch miserable little "pipers," is generally because the breeding stock has been illy treated during the winter months either by forcing for eggs or some other mismanagement, such as crowding in

close, ill-smelling houses and by being fed unsuitable rations.

It has been stated frequently that a hen is only an "egg machine," and by proper feeding materials you can keep it turning out the eggs in season and out of season, which we shall not dispute, but we do dispute, and so do other poultrymen of experience and intelligence, that good, strong chickens can be hatched from eggs laid by stock thus treated.

The season this year has been very late, with reports of poor hatches from almost every state in the union, and largely due to a long winter and a very much belated spring, which kept the birds under unfavorable conditions much longer than usual. This will bring out more late chickens than ever before, and as there is nothing else to do so as to get the full quota of chickens necessary than to hatch them out late, these chickens need the very best care that can be given to them, so as to be at all profitable as layers this winter.

But with care and attention it can be done, and as to the birds bred for exhibition late in the season, they can be brought into good shape so as to be ready for the winter shows; and as the other fellow probably is in the same fix, competition will be even on this score. But one word, if you will be wise: Keep your best old fowls for breeding for next season, for if you don't you may be put back for a good many seasons till you get righted again.

WINTER EGG PROBLEM.

This topic is always in season, and always open for discussion. There is no subject of more importance in poultry raising than this of how to get eggs in winter. The demand for winter eggs at extremely high prices is far greater than the supply, and the outlook is that it will continue indefinitely. We are working for a sure prize when we strive for eggs during the winter months. While nearly every poultryman and farmer is trying more or less faithfully for a share of this profit, only a few are succeeding well enough to reap any substantial reward, while others are meeting with complete or partial failure.

We have made a study of this subject and have been uniformly successful in getting eggs during the cold months. Of course one may get a few eggs in the cold months by a little extra care, but to produce a large egg yield one must have a bred-to-lay strain and then keep them in the pink of condition. We have no ironclad rules as to how we care for and breed our stock, and we are not conceited enough to think we know it all, but we don't intend to stop learning, as long as the power and privilege of study is ours. We must first look to the vitality of the breeding stock. In order to produce strong chicks, they must be vigorous, healthful and kept in clean quarters, free from lice and mites, which are two of the poultryman's worst enemies. Good breeding right here means something different from what it means from a fancier's standpoint of view. You can breed to fix the power of egg production in winter just as easily as a fancier can breed to fix style of carriage, shape and size of bird and color of plumage. It is a different process, but not a more difficult one.

We are partial to our young stock to see that they do not develop maturity too early. We have found from experience that if a pullet commences laying too early she will not lay as large eggs nor as many as the one that does not come to maturity too early. As the season is so far advanced, we will not take the time and space to tell you how we feed our little chicks until some other time. We have bred several breeds, but have discarded all except Rose Comb Rhode Island Reds, which from our standpoint of view is the hardest and most prolific breed now in existence for producing winter eggs. As we have only this one variety, we can devote all of our time and study to them, and improvement is sure. This is one of the many advantages of being a specialty breeder.

Now a few words as to our system of feeding for winter eggs. We are sure to look after all the little details which go a long way in getting winter eggs. After our birds are in winter quarters we feed mixed grains scattered in a deep litter in the morning and at noon composed of oats, wheat, buckwheat and cracked corn about equal parts, also a few sunflower seed mixed in. About 4 o'clock we feed a mash composed of 200 pounds bran, 100 pounds middlings, 100 pounds brewer's grain, 100 pounds ground oats. This is wet up with boiling water and mixed until crumbly. For animal food we supply green cut bone three times a week. We keep grit, shells, dry bone, cut clover and cabbage before the

birds at all times with a constant supply of fresh water in Austin's sanitary wall fountains. We are always sure everything is in a sanitary condition about the buildings. We herewith give our egg yield for last winter to June 1 from 115 Rhode Island Red pullets hatched April 15 and May 1. The pullets began laying about the middle of November. We are planning for a larger yield next winter:

November	500
December	1,200
January	1,700
February	1,300
March	1,400
April	1,750
May	1,550

Twenty of these pullets which were in a pen by themselves did better laying. This convinced us not to overcrowd the layers. Now, before we close, we want to give four warnings: Do not develop the pullets too rapidly. Fight the lice before they come. Do not overcrowd the layers. Keep plenty of fresh water before them at all times.

Fort Jackson, N. Y.

W. D. Austin & Son.

OUR FRIENDS, THE CHICKS.

Although the breeding season is practically over, and this subject has been treated on dozens of times, I will yet endeavor to set forth a few facts in regard to hatching and rearing of little chicks, hoping that it may help some one who has made a failure this year with his chicks, and that it may be the means of saving a few of the many chicks that die from improper care, either from neglect or from not knowing just what to do for the safety and comfort of our little friends who are almost entirely dependent on the owner for their living. In the first place, care should be taken in the selection of eggs for hatching. Be sure the eggs are fresh and from sound and healthy parent stock. See that the eggs are of an average size, of good shape, and have a good, firm shell. Put the eggs under the hen late in the evening, as she is less liable to leave the nest at night than in the daytime. After sitting on the eggs all night she will have become accustomed to them, and if she is a good, gentle hen there is not much danger of her leaving the nest. If you have a separate shed for your setting hens, all will be well, but if you are obliged to set your hens in the laying house, it would be a very good plan to cover the hen with a box or board to prevent laying hens from crowding on the nest and breaking the eggs. If this plan is followed, however, it will be necessary to take the hen off the nest once each day and give her plenty of fresh water and corn; also give her free access to a box filled with grit and crushed oyster shells, besides having a box of dry road dust, in which she can bathe, and help keep her body free from lice. After all these have been provided for the comfort of the good old mother hen, little can be done except to wait for the appearance of the downy little chicks, the appearance of which will gladden the heart of any true lover of poultry, as there is nothing prettier to see than a nest full of baby chicks after they are thoroughly dry. But now comes the time for the poultry man to prove whether or not he is equal to the occasion. If he can bring his chicks to maturity in spite of lice, varmints and the various ailments that little chicks are subject to, he can then claim the right to be classed as a successful breeder. Start things right by making war on the lice. The hen should be dusted with a good louse-killer, and the chicks should be greased with pure lard with a few drops of kerosene added. Rub this preparation on the top of the head and under the wings, and repeat the dose in about seven days and as often as necessary until the chicks are large enough to be treated the same as the old fowls. After the chicks have been greased, they should be put in a dry, clean box, along with the mother hen, and should be given fine sharp grit, and fresh water for at least forty-eight hours before giving them any food of any kind. Chicks that are fed too young will almost always have bowel trouble, which is the cause of more chickens dying than any other disease. Many breeders argue that chicks should be fed chopped boiled eggs and stale bread moistened in milk for the first few days, but it will be found that good results can be had by judiciously feeding a well-balanced ration of grain that can be bought at any good retail grocery or feed store. Scatter the feed on a clean board that has been covered with fine chaff or litter, as scratching for the food will give the chicks plenty of exercise, which means health and a rapid growth. Green stuff should be supplied daily and in sufficient quantities, as this is very essential to fowls of any kind. There are various kinds of green food that will answer the purpose, such

as lettuce, clover, lawn grass clippings and several others, but one that they will relish as much as anything you can get is tender green rye cut into bits about an eighth of an inch in length, and which after once having a good start can hardly be kept down no matter how much of it you feed. By carefully looking to these little details and by having good sanitary conditions, as well as protection from hawks and varmints, it seems that success must surely follow.

MAXIMS FOR POULTRY KEEPERS.

Start in a small way, and let your stock increase in the same ratio as your business.

Commence with one breed, study it until you feel that no man living can give you points about that particular breed, and in this way you will ensure success.

Stick to utility poultry-keeping until you thoroughly understand your breed; then go in for exhibiting if you prefer it.

Build fresh-air poultry houses, as these promote health, strength and vigor in your stock.

Remember the wonderful sweetening and purifying effects of lime wash, and give the inside of your houses a thorough coating of this two or three times a year.

Paint the outside of the houses, it looks better than tar, and this is a point of no small importance in these days of universal advertising.

In selecting a breed give due attention to the conditions under which the fowls are to be kept.

When making a start buy birds if possible, the cheaper method of purchasing settings of eggs being both uncertain and unsatisfactory.

Make the breeding pens as large as possible. I have never seen one too large, but I have seen hundreds too small; and a little extra expense incurred in this respect will be amply repaid by the increased fertility of the eggs.

If you wish to be successful as a breeder, do not use pullets for breeding purposes.

In mating up breeding pens choose a vigorous male bird, well up to standard, especially as regards color and size.

Go in for line breeding, the careless introduction of fresh blood may ruin your strain.

Remember that like produces like, and bear this in mind when selecting birds for breeding.

Avoid making the common and fatal mistake of overfeeding, or you will begin to wonder why you have so many unfertile eggs.

Don't use poultry spice. If the system of feeding is correct, there is no need to use condiments.

In rearing chickens remember that the golden rule is to feed little and often.

It is impossible to devote too much care and attention to chickens, but all cooing must be avoided, if strong, healthy birds are desired.

Give chickens as much freedom as possible, they will grow all the faster, stronger and healthier for it.

Anyone who is not prepared to work seven days a week all

the year round had better leave poultry-keeping alone; it is no business for him.

Do not begin the poultry business with the idea that you will make a fortune out of it, for the probability is that you won't.

There is money in poultry-keeping sure enough, but it is not every man that can pull it out.

The Windmill, Pndsey, Yorkshire, England.

A FEW WORDS ABOUT SELECTING PURE BRED POULTRY.

We often read controversies over certain breeds of poultry. A true lover of poultry admires all pure bred specimens, but it is necessary in deciding upon a choice to make a study of ourselves in order to be able to choose what breed we are best adapted to feed and manage with the best success. Every breed has its own characteristics and there is a great deal to admire in each. I would like to relate an incident to show how well the mother instinct is developed in the Plymouth Rock hen. One evening after the wind had gone down I decided to burn some brush heaps which were not far from the house, which afforded a harbor for injurious animals. After I had started the fire and while I stood watching the red flames go higher and higher, I heard a sound which startled me. It said "cluck, cluck, cluck, cluck." It was the low pleading voice of a mother hen calling her newly hatched babies from danger, and although she clucked and pleaded the little fluffy balls never stirred. They were snugly tucked under their mother's wing in the nest on the edge of the burning brush heap. I saw their danger and picked up some sticks and threw them at the hen in the hope that I might frighten her away; but it was of no use, she was a good mother, and like the boy on the burning deck, would not give up her post of duty. But the red, warm flames were coming nearer and nearer and it was getting so warm I could no longer stay near the burning brush, and I thought, "Oh, dear! she will be burned alive, babies and all!" and I looked about in hopes that I might find some way to rescue them from the burning death which awaited them. I discovered an empty salt barrel not far away and I ran for it and placed it over the nest in the brush with such force that the hen and 12 little ones flew in every direction thus saving them from the tragic death of being burned alive in a brush heap. Is there any one who will not admire such noble traits as those shown by the good Plymouth Rock hen? After this I had no fault to find with her, but I was very much displeased with myself as a caretaker of Plymouth Rocks. In the first place I fed them too liberally and I did not give them sufficient scratching room, and I decided I was better adapted to the care and management of the S. C. W. Leghorn. It is only by wise and careful selection that we can obtain the best results with any breed of poultry. Fifty or one hundred pure bred hens of one breed alike in comb, color and plumage gracing a beautiful green lawn of a country home is the most ornamental, useful and profitable addition to the farm.

American Poultry Association Meeting.

The thirty-second annual convention of the American Poultry Association will be held at Niagara Falls, N. Y., August 13, 14 and 15. Headquarters, International-Cataract hotels. All meetings will be held in the convention hall of the Cataract hotel. The program:

PROGRAMME.

Tuesday, August 13, 2:30 P. M.

Convention called to order by President Grant M. Curtis, Buffalo, N. Y.

Address of welcome, Hon. A. C. Douglass, Mayor of Niagara Falls, N. Y.

Roll call.

Reading minutes of last meeting.

Report of Election Commissioner.

Election of Board of Review.

Chalk Talk: Suggested improvement of, and additions to, illustrations in American Standard of Perfection, 1910 edition.—Franklane L. Sewell, poultry

artist, Buchanan, Mich.

Questions and discussion.

Debate: Question—Resolved, that the next edition of the American Standard of Perfection should contain color-plate illustrations of ideal fowls, male and female.

Affirmative—T. F. McGrew, Washington, D. C.; Thos. F. Rigg, Iowa Falls, Ia.

Negative—Arthur C. Smith, Waltham, Mass.; D. Lincoln Orr, Orr's Mills, N. Y.

General discussion.

Report of judges of debate.

Tuesday, August 13, 8:15 P. M.

Paper: Color descriptions in next edition of American Standard of Perfection and glossary of color terms.—F. W. Proctor, Spencer, Mass.

Address: What the General and Provincial Governments of Canada are doing in behalf of poultry culture. Illustrated by lantern slides.—W. R. Graham, poultry lecturer and manager of poultry department Ontario Agricultural College, Guelph, Ont., Can.

Questions and Discussion.

Debate: Question—Resolved, that the American Standard of Perfection gives undue prominence to the beauty value of Standard-bred fowls to the detriment of the utility value of domestic poultry.

Affirmative—Henry Steinmesch, St. Louis, Mo.; Geo. H. Northup, Raceville, N. Y.

Negative—H. B. Donovan, Toronto, Ont., Can.; H. A. Nourse, St. Paul, Minn.

General discussion.

Report of judges of debate.

Wednesday, August 14, 9:30 A. M.

Business session—American Poultry Association.

Order of business:

Exaugural address—President Grant M. Curtis, Buffalo, N. Y.

Report of secretary-treasurer.

Report of Board of Review (under suspension of rules).

Report of committee on advisability of using color-plates in next revised edition of American Standard of Perfection. Members of committee: Fred L. Kimmey, chairman, Morgan Park, Ill.; T. F. McGrew, Washington, D. C.; Thos. F. Rigg, Iowa Falls, Ia.

Discussion and action.

Wednesday, August 14, 2:30 P. M.

Business session—American Poultry Association.

Order of business:

Report of committee on proposed standard for judging dressed poultry and market eggs. Members of committee: Henry Trafford, chairman, Chenango Forks, N. Y.; Ross C. H. Hallock, St. Louis, Mo.; Franklane L. Sewell, Buchanan, Mich.

Discussion and action.

Reports of other committees.

Unfinished business.

Paper: Work and Opportunities of American Poultry Association Bureau of Lecturers—Hon. F. E. Dawley, Fayetteville, N. Y., director, Bureau of Farmers' Institutes for state of New York.

Questions and discussion.

Address: Character and Value of Work Being Done in Behalf of Poultry Culture at Agricultural Colleges and Experiment

Stations in the United States; illustrated by lantern slides—James E. Rice, Ithaca, N. Y., assistant professor of poultry husbandry, New York Agricultural College.

General discussion.

Thursday, August 15, 9:30 A. M.

Business session—American Poultry Association.

Inauguration of officers.

Inaugural address—Hon. C. M. Bryant, Wollaston, Mass.

Report of committee on educational statistics. Members of committee: Jas. E. Rice, chairman, Ithaca, N. Y.; C. K. Graham, Storrs, Conn.; Horace Atwood, Morgantown, W. Va.

Paper: Outline of Plan of Co-Operation Between General Association and Branch Associations, With Form of Charter for Use of Branches—Fred L. Kimmey, Morgan Park, Ill.

New business.

Report of executive board on branch organizations.

Thursday, August 15, 2:30 P. M.

Business session—American Poultry Association.

Report of executive board on licensing judges of poultry.

Report of executive board on certificates of membership.

Announcement by executive board of standing committee on revision of the American Standard of Perfection, committee of three on certificates, diplomas and medals, and other committees.

Recommendations of executive board.

Discussions.

Adjournment.

Thursday, August 15, 8 P. M.

Banquet (by private subscription) at Clifton Hotel, Niagara Falls, Ont., Canada, to American Poultry Association and guests.

Address of welcome—Hon. Robt. Slater, mayor of Niagara Falls, Ont.

Toastmaster—Hon. C. M. Bryant, Wollaston, Mass., president-elect American Poultry Association.

Responses by well-known American and Canadian poultrymen.

Extreme Types—Their Increase.

Where breeders of standard-bred poultry come to a realization of the fact that the high scoring, exceptionally fine exhibition specimen is an extreme type of the breed or variety it represents, then the breeding of Standard-bred fowls will be placed upon the footing it should be. Then there will be little of the haphazard matings; the thought that a pair of thoroughbred fowls, no matter how fine, will produce stock a majority of which will be truly representative of the breed or variety will have passed away; there will not be the trouble for, and damaging evidence against, the seller's exhibition stock, as we now find. The best thing ever written touching this very important subject is an editorial by C. J. Davies, in Poultry, England. It is something which every breeder should carefully read and then read again. In this most valuable contribution to poultry literature Mr. Davies says:

One sometimes hears old fanciers of long experience make the statement at a show that the variety in which they are interested has made no real improvement. Presumably those who have watched a breed from the commencement of its evolution are in a position to judge whether the contemporary champions are better or worse than

those of a previous decade, and it is a fact that it has often to be admitted that they are no better. The young fancier is usually skeptical when he hears this stated, and attributes it to prejudice in favor of past celebrities on the part of his more experienced friend. That the old fancier may be right, however, I will endeavor to show.

That there is more than one kind of variation, and that more than one kind of selection must be practiced when breeding for the show pen, theorists have rather overlooked of late. Mendel's discoveries have taught us that the germ cells are composed of a host of units, some active, some inactive, representing every character. We are aware that a breed or variety contains in its germ cells a certain combination of units, and that if it is pure these units only, and no others, are transmitted to the offspring. There is a wide difference, however, between pure stock and show stock. Of course, this fact is well appreciated by some fanciers, although it is constantly misunderstood by the uninitiated. To the latter, purity represents everything, and they are apt to think that show stock comes automatically from pure stock, which is very far from being the case.

The wide distinction, then, between show birds and pure-bred birds is the first truth which must be grasped before one endeavors to explain its significance.

The units which represent the different characters are unchangeable entities; that is, units which represent, say, red color cannot be changed in any way to represent any other color. At the same time the units themselves are thought to be subject to fluctuation which makes them to a certain extent variable—as in the case of different shades of red color.

The degree of activity of the units themselves, then, is the factor which controls the production of prize animals. A quality already present may be increased or decreased by taking advantage of this instability, and it is by exercising this form of selection that fanciers succeed in breeding animals which possess certain characteristics in exaggerated degree.

Once it is understood that fluctuations amplify or lessen existing qualities but do not really change their nature, one of the most important points in connection with breeding show stock has been learned. It must, furthermore, be emphasized that fluctuating variability differs from specific variability in that fluctuations are essentially unstable, whereas variability, due to the presence or absence of definite units, is stable.

What we wish to find out now is how the fancier can to some extent control this fluctuating variability of the units themselves so as to raise the standard of the stock he breeds, and afterward keep it up. There are certain laws in connection with the matter which, although somewhat complex, yet need to be understood. It has been found that fluctuations oscillate round an average type, and it is a matter of first importance to find out what the mean or average is for a given character. It is difficult to find a good illustration of this principle among poultry, but we will use buff color as a somewhat unsatisfactory example. Supposing that among a hundred buff birds the majority are found to be of a

medium shade of buff, this medium shade would constitute the average color of the strain, and we will call it 50. If the birds are classified according to their shade it will be found that they crowd around the average, and that there are one or two wide deviations. Thus if most of the birds can be classified between 40 and 50, yet there may be one or two so pale that they will only be, say, 20 (that is to say, their shade of color is rather less than half that of the average 50, and white 1). One or two other birds may deviate in the opposite direction, and may be in shade half-way between the average 50 and the very deepest buff, which we will call 99. Presuming that the object is to breed the deepest buff possible, the fancier would take the specimen which has fluctuated farthest away from the average, and would mate it with the average specimens. He will find that the average of the progeny will lie between that of the original strain and the quality of the chosen parent. Thus, if the deviating bird were of the value of 70, and it were mated with the average 50, the average shade of color of the progeny would be darker than the old average, but lighter than that of the deviating bird. In other words the average would be raised to 60. Moreover, if these individuals are bred from they will be likely to produce progeny which deviate from themselves as widely as did the previous generation, with the result that by again breeding from the most widely deviating individual and the new average of the type (60), the average of the progeny can again be raised to a position midway between the average and the most widely deviating individual. Farther than 99 it is impossible to go, as a deeper shade than this would not be buff at all.

Show points are propagated by selecting individuals which deviate in the desired direction, and building up the strain to an exaggerated type step by step. Although essentially a slow process to build up thus, it must be remembered that fluctuating variability is essentially unstable, and that the labor of years may come down with a run, so to speak, if rigid selection is discontinued for even one generation.

It will now be understood why stock cannot be raised above a certain point. It is impossible to get fluctuations of a definite character beyond a certain point, therefore it is impossible to "improve" indefinitely. In consequence of this an old-time champion may have been equally as good as a modern one, and it is certainly unreasonable to expect time necessarily to cause progress. The length of time a breed has been cultivated has comparatively little to do with its quality. As long as a sufficient number of generations have been bred to ensure by selection the desired amount of fluctuation in any direction, a bird which is perfect in the point desired can be bred.

The value of a strain which has been selected point by point until the average is high can now be better appreciated. Such birds may look little better to the uninitiated than any other pure strain, but their value as the producers of widely deviating stock with exaggerated characteristics is, of course, far above that of birds which are merely "pure." The average of the latter will be low, and their chance of producing widely deviating progeny correspondingly small.

**EASY
TO
USE

QUICK
ACTION**

That's what you want when you have vermin and lice in your poultry pens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultry pens, on stock, or bugs from vines.

Lewiston, Me. Apr. 19, 05.
Mr. D. J. Lambert, Apponaug, R. I.

Dear Sir: There are plenty of other kinds "just as good," but I want the "old Reliable"

(Signed) JOHN S. HYDE.

100 oz. \$1. Sample 10c.

The safest and most certain louse killer made. Ask for booklet. Sold by all dealers.

Hotel Accommodations and Rates at Niagara Falls.

Readers of American Poultry Journal who are planning to attend the first mid-summer annual convention and Poultry Institute of the American Poultry Association, Niagara Falls, N. Y., August 13-15, 1907, will be interested in the following information, which can be relied upon:

Temperance House, H. Hubb, proprietor—Located opposite main railway station, two blocks from A. P. A. headquarters, three blocks from falls. Enlarged and improved. Contains 180 sleeping rooms for guests. American plan only. Rates, \$2 per day, per person, two in a room; \$2.50 per day, per person, for room with private bath, two in a room. Will reserve rooms in advance without cash deposit.

The Hotel Imperial, S. A. Greenwood, Proprietor—Located opposite main railway station, two blocks from A. P. A. headquarters, three blocks from falls (adjoining Temperance House). Lately refurnished. Contains 125 sleeping rooms for guests. American plan only. Rates, \$2.50 per day, per person, two in a room; \$3.50 per day, per person, for room with private bath, two in a room. Double or single beds, as preferred. Will reserve rooms in advance without cash deposit. Prompt answers to correspondence.

International and Cataract Hotels, H. W. Isaacs, Manager—Headquarters A. P. A. Convention. Located two blocks from main railway station, one block from falls. Contain 500 sleeping rooms for guests. American plan only. Special rate to A. P. A. members, \$3 per day, per person. Regular rates, \$4 to \$6 per day. Double or single beds, as preferred. Will reserve rooms in advance without cash deposit.

The Clifton Hotel, Niagara Falls, Ontario, Can., Geo. R. Major, Manager—Located on the Canadian side, fronting upon and adjoining Queen Victoria park. Commands a sweeping view of both the American and Horseshoe Falls and Niagara Gorge. Completed in July, 1906, at a cost of over half a million dollars. Rates, \$4 to \$6 per day, American plan only. Reservations will be booked and guests thus provided for will receive first choice of vacant rooms on dates reserved.

Furnished Rooms—Practically every other house in Niagara Falls, N. Y. (a city of 35,000 inhabitants) offers furnished rooms to transient guests, the established rate being one dollar for a night's lodging. In some cases breakfast is included at this price.

Restaurants—There are numerous restaurants in Niagara Falls, N. Y., at which meals can be obtained at popular rates, at as low rates as prevail in the average city of this size. It is a mistaken idea that Niagara Falls is a "hold-up" town. On the contrary, if intending visitors to the A. P. A. convention will write the hotel proprietors and managers named herein, they can reserve and obtain accommodations at as low rates as are charged in other cities of the same size, notwithstanding the fact that August is the heaviest month at this popular and world-famous visiting place for tourists and excursionists. Besides the hotels above named there are probably a dozen others, notable among the number being the Prospect House and Clinton Hotel—the former high priced and the latter popular priced.

Those of our readers who intend to be present at the A. P. A. convention and

Poultry Institute are advised to lose no time in reserving rooms. As a rule, Niagara Falls is able to accommodate all guests, but it is needless to take chances, inasmuch as the hotel proprietors and managers above named will reserve rooms without requiring a cash deposit. Buffalo, N. Y., a city of 400,000 inhabitants, is located twenty-two miles from Niagara Falls and the round trip fare, by steam cars or electric, is 50 cents. Forty-five minutes is required to make the trip by steam cars, one hour by electric express and one hour and a half by ordinary electric cars. Electric express cars leave Buffalo hourly, on the half hour. The trip is made along the Niagara river, between Lake Erie and the falls. Lack of space forbids our enlarging upon the many attractions of Niagara Falls and vicinity. This is conceded to be one of the great show places of the world. The climate is cool and invigorating during August and all who attend the A. P. A. convention and Poultry Institute can rely upon an enjoyable and profitable vacation.

Reduced Railroad Rates to Niagara Falls, August 13-15, 1907.

The president of the American Poultry Association has made application to the commissioner of the Eastern Trunk Line Association and the commissioner of the Central Western Passenger Association for reduced rates to the mid-summer convention and Poultry Institute of the association, to be held at Niagara Falls, N. Y., August 13-15, on the basis of one and one-third fare for the round trip. At this writing (June 10) the executive boards of the two associations have not held their June meetings, hence we are not in a position to state positively that the reduced rates asked for will be granted, but these rates were conceded for the A. P. A. meeting held at Cincinnati, Ohio, January, 1906, and it is believed that if 100 or more members of the American Poultry Association attend the Niagara Falls convention the one and one-third rate will be obtained.

By the time these lines are read the president of the American Poultry Association expects to be fully informed on the subject of reduced railroad rates and interested persons can learn full particulars by addressing Grant M. Curtis, Buffalo, N. Y. An attractive twelve-page circular of announcement, containing the program of the A. P. A. convention and Poultry Institute, and reliable information regarding hotel accommodations, railway rates, etc., will be ready for free distribution July 1, and the president of the A. P. A. will be glad indeed to mail copies, on request, to all persons desiring same. Address as above.

Why seek to make it an "all southern show?" The south is able, if breeders there will unite, to hold a show of national importance and magnitude annually. Northern breeders will be glad to patronize such a show.

The American White Wyandotte Club has been invited to hold its annual exhibit with the Cleveland show in January. We can assure the club that if this invitation is accepted it will be well for all concerned.

The 1910 edition of the American Standard of Perfection will contain

colored plates of a number of breeds and varieties of fowls, if the recommendation of the committee, Messrs. Kimmey, McGrew and Rigg, is accepted by the association at the Niagara Falls meeting. The American Poultry Journal, the pioneer in the field of good color work illustration, will heartily congratulate the association when it takes this step.

Upon the whole this has been a season of poor hatches. Reports to this effect are general. Various causes are being assigned. The fact is that every season following a mild winter is a poor hatching season. There has never been an exception to this. Now will some man tell us why this is so.

The committee appointed at the Auburn meeting of the American Poultry Association to prepare a Standard by which dressed poultry shall be graded and judged, will report at the Niagara Falls meeting. The committee will recommend that this Standard be a book of about 100 pages—a work separate from the Standard of Excellence.

Says "Drev," in the Stock-Keeper: "Loading up the Standard with sub-varieties of a breed that are not entitled to be classed as such, owing to absence of any real blood relationship, is calculated to do much harm. The Wyandotte family has increased rather largely, and in some instances without any infusion of Wyandotte blood. A popular brood name is a pretty strong incentive for the manufacturers of sub-varieties to adopt it for one of their new productions. We expect to see the golden barred Plymouth Rock launched one of these fine days, on a sea of popular demand and sell like a house afire. Whether it will contain Plymouth Rock blood or not, will not matter. The name must be used to boom it. But it should prove a handsome variety all the same."

Colored Cover For July.

This month we present to our readers a very handsome and artistic drawing of a pair of Columbian Wyandottes. The artist is certainly to be complimented on this true-to-life picture of this breed, which is at the present time attracting so much attention all over the country. There has probably never been, with one or two exceptions, a variety produced that has met with such popular favor in so short a time, as the Columbian Wyandotte, and a glance at our front cover this month will convince any one that this variety is one of the handiest fowls that has ever been produced. Next month will be shown a pair of White Crested Black Polish, a variety which a few years ago was very popular, but has been crowded into the background by the craze for something new.

Edgar G. Simpson, Naperville, Ill., the Barred Plymouth Rock specialist, is offering some great bargains this month in his breeding stock. If you want something good in this variety at less than half their value, you should write him at once and mention American Poultry Journal.

Poultry Press Review.

"Drev." in the Stock-Keeper is of the opinion that "a tilt between two hide-bound and dyed-in-the-wool fanciers, who believe in feathers only, and two liberal minded chicken cranks who like a little meat and eggs thrown in with the feathered raiments, could draw a crowd, even in a warm hall on a hot day in August."

Miller Purvis, of Poultry, has been out on his California ranch for several weeks. In a letter he says: "I can sit right here where I am writing and see Mt. Shasta, seventy miles away, towering above the trees. By turning around and looking from an east window I could see Mt. Lassen, seventy-five miles away, and from the back door Mt. St. John looms in the southwest, ninety miles away. West, north and east snow-capped mountains and the lower peaks this side of them. All around towering hills, deep gulches, pines, live oaks, white oaks and the manzanita and chaparral bushes."

And there, with that beautiful nature picture before him, he wrote this for Poultry:

"The principal fault we find with the comments that appear in Farm Poultry is that they are mostly too true to be pleasant."

"We expect the plan of balloting and voting by mail to prove to be an unsatisfactory failure. It gives representation to members who have never turned over their hands either for or against the association since they have become members. Such members are worse than none. Better ten active

members than ten hundred who have no lively interest in the association.

"We are heartily in accord with the tion of publishing separate standards for the several breeds, putting all the varieties of a given breed in one volume. We believe such a division of the Standard to be desirable and that it would become a source of greater profit than will ever be derived from the Standard in its present form. Such a division of breeds would not require any extra typesetting, except for a few pages in the front of the book. A breed standard could be sold for ten cents at a profit of about 900 per cent and the sales of those parts devoted to the more popular breeds would be immense, because every breeder would then feel that he could afford to own the Standard of his particular breed."

The Industrious Hen says "the All-South show is coming. Interest is awakening all down the line, and the demand for it is becoming general among our breeders." Wonder if Brother McReynolds will allow any of us "North-ens" a look in?

The New England Poultry Journal says that "Skim milk at 6 cents a gallon is a very cheap food for old or young stock." Would be difficult to induce western feeders to look at it this way.

Commercial Poultry holds that "it is the winter-laying hen that pays the profit. The heavy layers—150 to 200 eggs—must of necessity lay at least half of their eggs in the winter because they could not possibly crowd them

into the spring and summer months, counting out the broody and moulting periods." Wonder if Commercial Poultry believes that even one per cent of the hens in all America average 200 or even 150 eggs annually?

The following, from Poultry, London, England, reminds us of the days of 1882-3, when the Silver Laced Wyandotte craze was on in full in this country. Same tactics, same human nature: "Early in the present year, when the craze for Black Wyandottes was taking a big hold of those breeders who were looking out for 'something new,' some hundreds of black or slate-colored pullets and hens, no matter what breed they were, providing they possessed something approaching a rose or pea comb, or yellow legs with a comb of any description, were purchased by the dozen at prices ranging from half-a-crown to three shillings and sixpence each from farmers and small cottage fanciers, and sold to anxious would-be Black Wyandotte fanciers at prices from seven shillings and sixpence to a guinea each."

Says Poultry Advocate: "We believe that there is great power in 'thought force.' The 'I can and I will' power will prevail where a lack of confidence, or belief in our ability to succeed, will cause us to fail." Ever try that with an unruly setting (or sitting) hen, Brother De Puy?

American Stock-Keeper: "In the regular meetings of the American Poultry Association, a subject is likely to be introduced that will create some lively discussion and make some members show

the stuff they are made of, when the borrowing and lending of show birds comes up. Recent developments, charges and counter-charges regarding this growing evil will be aired in the poultry press unless all signs fail. When men deliberately advertise eggs for sale from pens headed by birds they do not own, and never had in their yards, it is bound to create an ugly feeling, and several such cases are now being investigated for the purpose of taking some action to stop the practice. The Poultry Club of England usually makes short work of such cases. The offenders are barred from showing for a year or two and it usually cures them of exhibiting birds they do not own." Hope this show is really filled for an appearance. Time some of the rascals were put out.

* * *

Human nature is the same the world over, we guess. The Australian Hen says: "It is a strange thing that in every other branch of stock raising buyers are only too anxious to publish the pedigree of their stock, but in the poultry business it is the reverse."

* * *

Farm Poultry has this to say regarding the announcement of Election Commissioner Kimme as to the result of the A. P. A. election: "It does not appear from the election commissioner's report by what authority he decides that the memberships of the elective members of the executive board are to be determined first, and the question of eligibility to the office of first vice-president settled in accordance with these. The rule he appears to have followed was to give each state or province, where it had two candidates, the position for which a candidate received the highest number of votes, and to give to a person running for more than one position the position for which he received the highest number of votes. It is perhaps as fair a rule as could be devised for such a situation, but the situation is an unfortunate one. If the constitution gives the commissioner power to adjust such matters, we have overlooked that point in reading the constitution."

* * *

Poultry Topics wants to see the western breeders, especially the western exhibitors, go down to Madison Square next winter and "see things." Good suggestion. Hope Topics editor will take the advice unto himself. The editorial abuse of eastern breeders would quickly disappear from Topics.

Facts and Fancies.

Written for A. P. J. by D. Lincoln Orr.

Somewhere recently I saw a little notice that "The problem of civilization is to eliminate the parasite." I would like to change that a little by saying the problem of chicken raising this month is to eliminate the lice and mites.

In looking over an exchange I notice an advertisement which reads, "Barred to the skin and 'notice the barring on the under color,'" but when it gets that one has to have his Rocks barred to the bone, why it seems to me they ought to be barred entirely.

I suppose our friend of Poultry Topics takes himself very seriously when he suggests what our little "mutual admiration club," as he calls it, should do. If

more people would look on this life more as a joke there would be less funerals at forty. Years and years ago I was taught "not to let my right hand know what my left hand was doing," so it would not do for our little club to follow the suggestions of the man from Lincoln.

I am also mighty glad that you have read Mr. Riggs' resolution over the second time and had the true idea and meaning brought out. You are mighty lucky, as I guess it's a 100 to 1 shot that you are the only one, but then Lincoln, Neb., is a noted place nowadays.

Before space is filled up I want to pass my compliments to the Stock-Keeper on securing Drev as an asset. There is early it will keep some of us guessing a no one on the stage of poultrydom who can write so pleasingly, for Drev seems to have a way of his own that is enjoyed and I have no doubt but his pen will very materially aid the paper. Personally I am mighty glad to be able to read his "Notes in Passing" and trust a long time will elapse before he lets go again.

I had promised to tell something about wireless at the Boston A. P. A. meeting, but I hardly dare now, as Drev is back in harness again and the Hon. David A. Nichol is on the board of directors, and as they were the chief sending and receiving station I better go slow.

I would suggest, however, to President Curtis that he include in the program to be executed at Niagara next August an essay or short talk by the Hon. David A. Nichol entitled "How I Presided at the Revision Meeting of the A. P. A. at Boston."

"Fear is the graveyard of prosperity."

Well, the election seems to be over—I say, seems to be over. Maybe it is and maybe it is not. In looking over the returns I find that some one is trying to prove that two and two don't make four.

Two and two made four in the garden of Eden, as they ought to in an election of officers of the American Poultry Association. I no doubt will be disliked for making the assertion, but I cannot see that Mr. Crawford was elected as first vice-president. It is dead wrong from my point of view. I am no lawyer, but as Mr. Atherton I think said, the ticket should be counted from the top down. It's the worst case of "jockeying" and I trust the Board of Review will out of decency to the association declare Mr. Donovan duly elected on the recount.

There may have been things done in the past that could not stand a strong light, but the declaring Mr. Crawford elected with only six votes to over a hundred or more for Mr. Donovan is the limit.

And you can just rest assured the civil courts would seat Mr. Donovan, were this a political office with a fat salary; you would see Mr. Donovan making things warm. Why shouldn't he?

From what I can learn I must congratulate Messrs. Russell and Burgott on their clean campaigns, and if the report is true that Mr. Hallock sent out letters to the effect that Mr. Burgott had withdrawn from the race without positive

proof from Mr. Burgott, why then he should be censured. I only hear these things as rumors. Mr. Hallock should be given a clear title if innocent, which I hope he is.

I sincerely trust the officers in charge of the election will see where the constitution is lacking and have amendments to cover defects. No one can expect the association to branch out with a brand new constitution and have it score 100 points. It no doubt will be cut for symmetry, it will be short weight, too high on legs. The standard calls for a rose comb, but it looks very much like a single comb. On the whole, a good judge who is not biased and has no pet ideas of his own would give it a score of about 93½ with a cut of 3 points on weight. The score card will have to be used, as there is nothing with which to compare it.

I was looking over a paper the other day (forgot the name) and saw the cut of a very fine S. C. White Leghorn male. Its name was Togo II. The owner belongs on the Pacific coast, in California, I believe. In the first place, Togo is a good name for a pit game; in the second place, from the daily papers I notice that the Japs don't stand very high in that state, and for a Californian to call anything after a Jap seems funny.

I wish Mr. Bates would give me some sort of a title, 'steenth assistant editor, then I might have a chance to land an office in the A. P. A. Have you studied the list? But, then, the editors are more interested than the breeders in keeping things going and in the limelight.

The only regret I have is that I cannot be at the meeting in August. That is the only week in the year that I must stay home. I am the only loser, however.

Every night be sure and dump out the water in the drinking fountains. Don't let the chicks drink water that has been there all night. Did you ever taste water that has been in the pitcher a hot night? If you haven't just try it once. Then think of the chicks.

It's the same old cry, "The man behind the gun." Read what the Maine Farmer says. It suits just the same for poultry:

"If a farmer wants to carry on a special dairy line of work, then he will find his greater success with the special dairy cow. On the other hand, if he prefers to give his business a wider scope and carry it on in a more general way—grow up animals and make milk and meat—then he will find the cows suited to this more general work the better ones for him to keep, and no man can arise and truthfully say they are less desirable or less profitable than the one-purpose dairy cows. In either case the greater success, if there be any, will rest with the man who owns and handles them rather than with the breed of cows."

I wonder if Drevstedt really meant what he said in the Stock-Keeper about "scramble for office," "old-fashioned dignity," "wire pulling," etc. Gee! but his memory must be short. While he has never been guilty of "scrambling for office" I guess he has done his share of wire pulling. How about Kansas City, Washington, New York, Boston, Toronto? How about these places, Drev?

Was there any scramble for office? Chicago (1893)—was there any wire pulling? and in Chicago (1893) where was the dignity? The above was written "lest we forget."

It seems to be hard for people to write advertisements understandably. I noticed one the other day which stated: "My birds won at ——— show and at the New York show in a big class, winning"—(and the party went on and stated the winnings). Now, which show were these made at? There is a vast difference in winning at ——— show and at New York. Be more explicit, please.

If we had a few more Washingtons and a few less Ananias there would be less misunderstandings.

There seems to be much complaint about poor hatches this season—more than common. But, then, every year the peach crop is ruined, but we usually have lots of peaches; so, when the birds are rounded up in the fall guess they won't go shy much. The season no doubt is at least two to three weeks late and hatches, as a rule through this section, have been poorer than usual and in some instances the chicks are not doing well. It means more late hatches and closer attention to the chicks that are out. With the season so late and the New York show so little.

I wish some one in authority could have more control over exhibitors at shows. The more I think of the many things they do the sadder I feel. They should not be allowed to touch a bird after they deliver them to the express company. A poor fellow who, by sickness, distance or a thousand and one things is not able to be present at the show is handicapped by the fellow who is there. The exhibitor who can get to the show has a chance and does look over the other fellow's birds and in looking them over he sees he has no chance to win on pen, and by taking the male out of the pen and putting it in the open class or vice versa he can get in the money; likewise a female; and I do not think it right for him to have that opportunity and advantage over the fellow who cannot get to the show before judging, if at all. Birds should leave the breeder's yards just as they are to be exhibited. If he has made a mistake let him abide by it; but do not let him change his birds or perchance buy another breeder's bird at the show to finish out a pen where one bird in it has shortcomings. Give them all a square deal and not give one advantage over the other.

Some may say, Let the other fellow get on to the job. That's all right, but he can not afford it possibly; anyhow, it should be stopped—this swapping even one's own birds at a show. There is enough faking done at home without carrying it to the show room.

If New York, Boston and Chicago show management would make that rule and stick to it, it would be a winner, and let me say right here, these three shows can make and enforce about any rule they wish unless it is revolutionary. I believe if the New York show should charge \$5 entry fee we would have the garden well filled. Everybody seems to be running around with a bird, doctoring it up somewhere or making some change.

Of course, some people will break any rule, but when caught bar them out from competition that year.

Talk plain and act square and live up to the rules of the show, or keep your birds at home, as the secretary has a big load to carry, and when every one is jockeying to beat around some rule it makes it harder.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

PAINESVILLE, O.

The Painesville Poultry and Pet Stock Association will hold its twelfth annual show January 6 to 11, 1908, both dates inclusive. This is the oldest association in Ohio; for eleven consecutive years this association has held an exhibition and each show has been better than the preceding one. The members are already making plans for a larger and better exhibition than ever; premiums have always been promptly paid and fair treatment accorded every one.

W. C. Denny, of Rochester, N. Y., will place the awards. Jesse Canfield, secretary; A. A. Lee, assistant secretary. Any communication addressed to either of these gentlemen will have prompt attention.

SPRINGFIELD, MASS.

The Springfield Fanciers' Club, of Springfield, Mass., elected the following officers for 1907: E. L. Smith, West Springfield, President; Geo. W. Patterson, Chicopee Falls, H. H. Graves, Springfield, William Kingman, Feeding Hills, Vice-Presidents; W. R. Graves, Springfield, Secretary; E. C. Phillips, Agawam, Recording Secretary; H. B. Waite, West Springfield, Treasurer; Thomas Rae, Holyoke, J. R. Jones, Suffield, Conn., W. J. Wallace, Westfield, members of Executive Committee.

The second annual show will be held December 3 to 6 and will be a Comparison Show. A. F. Pearce, Winches-

ter, N. H.; A. C. Hawkins, Lancaster, Mass.; H. P. Schwab, Irondequoit, N. Y., and Lester Tompkins, Concord, Mass., will place the awards.

These well known judges are a guarantee that awards will be properly placed. The Empire Cooping Company has contracted to coop the show. The club is in a good financial condition and will offer an attractive list of prizes.

As the show comes two weeks before the Madison Square Show at New York it will offer an excellent opportunity to try out your birds for the big show.

We invite all exhibitors intending to show the coming winter to include Springfield in their list. The officers of the Club have had many years of experience in handling shows which is a guarantee that it will be well managed.

W. R. Graves, Sec'y.

THE CHICAGO SHOW.

The twelfth annual exhibition of the National Fanciers' & Breeders' Association will be held January 22 to 29 inclusive, except Sunday, 1908. Officers for the ensuing year are E. B. Eddy, President; E. J. W. Dietz, Vice President; George G. Bates, Treasurer, and Fred L. Kimmey, Secretary. The show will be under the management of the following committees: Finance, E. J. W. Dietz, Downer's Grove, Ill.; John C. Klein, Blue Island, Ill.; J. Lewis Draper, Marquette building, Chicago, Ill. Judges and Specialty Clubs, Frank B. White, Electrical building, Chicago,

Ill.; George G. Bates, corner West Monroe and Clinton Sts.; K. J. Muir, 1753 North Sawyer Ave., Chicago, Ill.; M. Wagner, 2663 West Fulton St., Chicago, Ill. Premiums, K. J. Muir, 1753 North Sawyer Ave., Chicago, Ill.; Fred L. Kimmey, Morgan Park, Ill.; J. Lewis Draper, Marquette building, Chicago, Ill. Advertising and Printing, E. J. W. Dietz, Thomas F. Rigg, Iowa Falls, Ia.; E. B. Eddy, 87 Washington St., Chicago, Ill.; John C. Klein, J. Lewis Draper and Frank B. White. Concessions, Fred L. Kimmey, Frank B. White and E. B. Eddy. Protest, E. W. Wickey, E. J. W. Dietz, K. J. Muir and M. Wagner.

Fred L. Kimmey, Sec'y.

MERIDEN, CONN.

The Meriden Poultry, Pigeon and Pet Stock Association will hold its sixteenth exhibition in the new \$225,000 Town Hall, Meriden, Conn., December 31, 1907, and January 1, 2 and 3, 1908.

We shall endeavor to make this the banner show of the East, outside of New York and Boston. It will really be a repetition of the shows we held fifteen years ago which had nearly 100 entries of Light Brahmas, 200 each of Barred Plymouth Rocks and Silver Wyandottes, etc. Entry fee of 75c will be charged for single birds and \$1 for breeding pens. Premiums: Single birds, first, \$1.50; second, 75c; Pens, first, \$3; second, \$1, and in all classes where there are six or more entries, \$2.50 will be offered for best cock and two hens, and the same amount for best cockerel and two pullets. Also the regular number of prize cups, etc., will be offered on all classes.

All specialty clubs that will hold their State meeting at our show and offer their state cup or trophies to the above show, to these we will donate \$10 to be competed for by club members only.

The cooping will be done by Mr. O. J.

RARE BARGAINS

IN "RINGLET" BARRED ROCK HENS

To quickly reduce the number on my farm for summer I will sell **grand breeding and exhibition yearling hens** at prices that are **matchless bargains**. These hens are now in my matings and could not have been bought earlier for **much more money**.

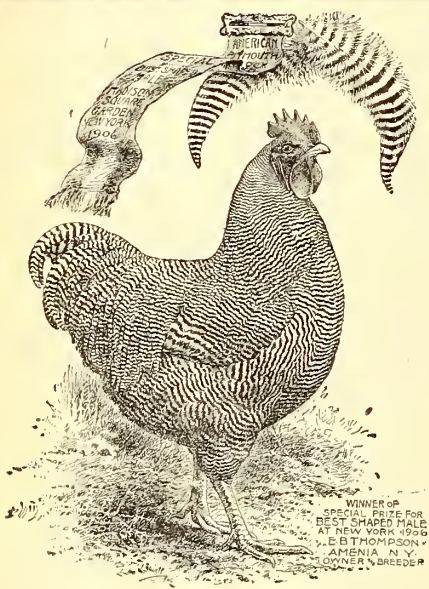

The wisdom of buying "Ringlets" now for show or next season's breeding is **absolute and positive—it is sound business judgment**; better than putting money in stocks, bonds, or a savings bank. This **summer reduction sale** of yearling birds stands out **head and shoulders** among the multitude of bargains now being offered.

The "Ringlets" have an international leadership. They encircle the globe and are bred in every land and country where Barred Rocks are known.

Every factor known to the science of Barred Rock breeding has been done to bring my "Ringlets" to their present matchless state—THE IDEALS OF THE NEW STANDARD OF PERFECTION.

The situation spells opportunity, make it yours and now. I will sell in any numbers and mate with cocks to produce winners if desired. The "Ringlets" have won and made money for others, they will win and make money for you.

Splendid new 48-page catalogue mailed upon request. It is full of original illustrations of New York winners from life. See my ad on back cover. Address

Bailey, of the Nutmeg Coop "fame," of Bristol, Conn. The ribbons will be placed by Messrs. W. B. Atherton, W. H. Card and D. A. Nichols, which is a guarantee of a square deal to all.
Joshua Shute, Sec'y and Treas.

WHITE PLAINS, N. Y.

The Westchester County Poultry, Pigeon and Pet Stock Association will hold its next annual show November 26 to 30, 1907. Mr. George W. Weed, W. C. Denney and W. J. Stanton will officiate as judges. It is the earnest desire of this association to make the White Plains show strictly a fanciers' show, second to Madison Square Garden in numbers only. Of course, the management can only bring about one-half of these desired results and the entire success of their efforts depends as much or more upon the exhibitors as it does upon the management; and they depend upon, look for, and hope to have the undivided support of all fanciers and exhibitors who showed with them last season, and as many more new ones as desire to come; and to all they give assurance of a square deal, fair treatment, and a good time.

Frank W. Gaylor, Supt.

NEW BERLIN, N. Y.

The second annual show of the Unadilla Valley Poultry and Pet Stock Association will be held at New Berlin, N. Y., January 28, 29, 30 and 31, 1908. The last show was a great success, over six hundred birds being on exhibition. One feature of the show that was very much appreciated was the Poultry Institute held in connection with the show. This idea will again be carried out next year. The management is planning to make the next exhibit larger and better in every way. Don't fail to bring your birds to New Berlin, for the next show and institute promises to be the best ever. For further information address the Secretary, R. F. Talbot, New Berlin, N. Y.

WINDBER, PA.

The Windber Poultry Association will hold its second annual show February 11-15, 1908. The object of this association has been and will continue the promotion and encouragement of standard bred poultry, pigeons and pet stock. Judge H. A. Emmel, Mars, Pa., has been secured to judge the show and after the awards are all placed by him, he will give illustrations and explanations on the scoring of birds of the different classes, which will be educating for the amateur breeders and exhibitors. We cordially invite all interested exhibitors to send for premium list and show with us.

Ambrose Eves, Sec'y.

CHILTON, WIS.

The Eastern Wisconsin Poultry and Pet Stock Association will hold its annual show January 6-10, 1907. Judge Rountree will place the awards. A. Stransky, Secretary.

CORFU, N. Y.

The annual meeting of the Corfu Fanciers' Club was held on May 22, 1907. Mr. H. E. Stevens was reelected president, and Mr. G. R. Colby secretary in place of Mr. Phelps, resigned. This as-

That is just where Amatite roofing should be—on top of all your buildings, keeping them free from leaks year after year.

For all-around service and durability, it is unapproached by any other. It is built of materials that have been tried and tested under every possible weather condition;—each part is tested—the whole is tested before it goes to you.

Is that done with shingles, tin or ordinary ready roofings? How many bad shingles do you find in a bundle? How often do you have to paint or coat the smooth ready roofings to keep them tight? Think

about these things—and when you need a new roof, you'll buy Amatite—the roofing with a real mineral surface, which does away with painting and repairs.

When you once cover your buildings with Amatite, you have no further trouble or expense.

Any one can lay it—no skilled labor required.

FREE SAMPLE

Let us send you a Free Sample and you'll see at once how much better it is than the ordinary roofing. A postal card will bring it.

MODEL

INCUBATORS

—AND—

BROODERS

I can help you make a success in the poultry business, whether it's a hundred hens for your own table-supply or fifty thousand layers for large commercial purposes. My experience has been so broad, so varied; I have "come up against" all the "ins and outs" of hatching, brooding, feeding and marketing of poultry that many say I am an authority on profitable poultry-raising. As a proof, my Model Poultry Farm was a profitable success in six months. I now have poultry there numbering

80,000, Hatched and Brooded

in my famous Model Incubators and Brooders. Buying your incubators and brooders of a man who knows nothing—or very little—about hatching and raising poultry is running a useless risk. Don't do it. I not only sell you a Model Incubator or Brooder but I add to them the valuable experience of years as shown in their construction. Model Incubators show excellent hatches—hatch every hatchable egg. The Model Brooders grow sturdy chicks. Remember, my interest in you doesn't cease when I ship you a machine and get the money. You buy a part of my time and are cordially urged to write me and ask all the questions you wish. I'll stay by you. Send your order today and get in line with the profit-getters. Free catalog for everyone.

Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. Haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first two weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND Poultry Foods

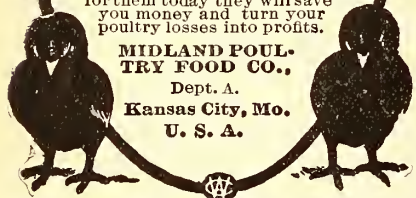

take the lead with successful poultry-raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall—it makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected" are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

sociation has held four very successful shows and is looking forward for the next show which occurs December 3, 4, 5 and 6, 1907, to be the largest in its history. In making your dates for next winter do not overlook Corfu. They offer liberal regular and special prizes and, best of all, every prize is paid on the last day of the show.

G. R. Colby, Sec'y.

WASHINGTON, PA.

The Washington Poultry and Pet Stock Association will hold its second annual exhibit January 6-11, 1908. Mr. Thomas S. Falkner, of Tiffin, Ohio, will place the awards. Our first exhibit was a very successful one and we propose to make this one even more so, and the outlook is very gratifying. We will offer many special money premiums as well as many other special premiums. Information cheerfully furnished by the secretary, Dr. George M. Boone, Brown building, Washington, Pa.

LAKE GENEVA, WIS.

The Mid-Summer Fair Association, of Lake Geneva, Wis., will give its third exhibition at James Hobart Moore's Stock Farm on the south shore of Lake Geneva, Wis., July 26-27, 1907. A large exhibit of all kinds is expected, especially poultry. The Lake Geneva Poultry and Pet Stock Association will furnish the coops and Franklane Sewall will do the judging. Remember the dates. H. Bartholmay, Sec'y.

Lake Geneva, Wis.

CLARKSBURG, W. VA.

The Clarksburg Poultry and Pet Stock Association will hold its annual show January 28 to 31, 1908. Owing to the increase of interest, the show has become the largest and most popular show in the state, making it necessary to employ two judges for 1908. The following judges have been selected: D. J. Lambert and C. E. Cram. E. M. Wilson, Secretary.

BRIDGETON, N. J.

The South Jersey Poultry and Pigeon Association will hold its fourth annual show at Bridgeton, N. J., November 27 to 30 inclusive. B. B. Ware, Show Secretary; Louis G. Heller, Superintendent.

LYNN, MASS.

The eleventh annual show of the Lynn Poultry Association will be held January 6-10, 1908. W. H. Card and A. C. Smith, judges. Chas. E. Waterhouse, Secretary, 10 Roy St., Swampscott, Mass.

JERICHO, L. I., N. Y.

The Long Island Poultry and Pet Stock Association will hold its annual show November 19-22, 1907. J. H. Drevenstedt and W. J. Stanton, judges. Robert Seaman, Secretary, Jericho, N. Y.

LEBANON, PA.

Lebanon Pigeon, Poultry and Pet Stock Association will hold its second annual show December 27, 1907. W.

Lost Strayed or Stolen—One Cow

That is about what happens each year for the man who owns five cows and does not use a **Tubular** cream separator. He loses in cream more than the price of a good cow. The more cows he owns the greater the loss. This is a fact on which Agricultural Colleges, Dairy Experts and the best Dairymen all agree, and so do you if you use a **Tubular**. If not, it's high time you

did. You can't afford to lose the price of one or more cows each year—there's no reason why you should. Get a **Tubular** and get more and better cream out of the milk save time and labor and have warm sweet skimmed milk for the calves. Don't buy some cheap rattle-trap thing called a separator; that won't do any good. You need a real skimmer that does perfect work, skims clean, thick or thin, hot or cold; runs easy; simple in construction; easily understood. That's the **Tubular** and there is but one **Tubular**, the **Sharples Tubular**. Don't you want our little book "Business Dairymen," and our Catalog A.205 both free? A postal will bring them.

**THE AMERICAN WHITE ORPING-
TON CLUB.**

Mr. F. S. Bullington, Secretary of
the American White Orpington Club, is
mailing to every breeder of White Orp-
ingtons, a small circular calling atten-

tion to the Club, and the advantages of
becoming a member of the same. The
new emblem as shown here is the offi-
cial one, and is distinctive and attrac-
tive. Every breeder of White Orping-
tons, single or rose comb, should be a
member of their specialty club, and help
in every manner possible to place their

breed to the front. If you have not re-
ceived one of the circulars, send to the
secretary for one. Secretary's address,

dent, W. L. Davis, Berlin, Conn.

Editor American Poultry Journal.

Dear Sir: Referring to an article in
the June number of A. P. J. regarding
a new poultry association in St. Louis, I
want to say that while this new associa-
tion has my very best wishes, yet I must
take exception to some of the statements
made regarding the old association. This
old association is the St. Louis Fanciers'
Association, incorporated under the laws
of the State of Missouri in 1896, 11
years ago, and is in good standing today.
It has held 10 shows (skipping one dur-
ing World's Fair year) under the "one
man" policy and that "one man" is es-
pecially proud of the fact that in all
these years every exhibitor has always
been paid his winnings promptly and
also proud of the fact that without any
personal or special solicitation, we have
always had all the birds that we could
take care of properly.

The Board of Directors of the St.
Louis Fanciers' Association for 1907-
1908 is as follows: E. O. Hunter, of
Hunter Bros. Milling Company; C. A.
Morton, of Morton & Co.; J. C. Salz-
geber, of William J. Lemp Brewing Com-
pany; Henry Steinmesch, W. J. Pitcher,
Hon. W. W. Henderson and C. H. Ah-
rens, and this board elected the follow-
ing officers: E. O. Hunter, President
C. A. Morton, Secretary, and J. C. Salz-
geber, Treasurer.

St. Louis Mo. Henry Steinmesch.

at New York Shows have been
bred by us the last Eighteen
years.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Please answer the following: (1) Why do not chickens overfeed when hopper fed and are they not apt to get too fat? (2) I notice many large poultry plants advise open front houses and say they should be built with double walls and be built warm. Why is this necessary just as long as the draughts are shut off? The open front lets in all the cold. (3) What is the average number of eggs the White Plymouth Rock lays? (4) Ought green bone to be fed during the summer?

Put-in-Bay, Ohio. O. A. S.

Answer:—(1) Where fowls have access to feed at all times they are not so liable to get over-fat as where they are overfed by hand. Where hoppers are used fowls should be given as much free range as possible. (2) We have never used the open-front houses; but all those we have examined were double-walled in the back where the roofs were located. (3) This all depends on the strain and individual bird. There is no way of striking an average for this variety. (4) If fowls have free range green bone is not necessary during the summer.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer in your July issue of the American Poultry Journal the exact markings of black Minorca chicks when first hatched. Telles, N. Mex. M. M. H.

Answer:—Black Minorca chicks when first hatched are usually black and white, with pink colored legs and bills.

Editor American Poultry Journal.

Dear Sir: Please answer the following: (1) Placed R. L. Red and Rock eggs in incubator, incubator in cellar, 3-foot stone wall, 7-foot high, plenty light, floor clay and very moist, cut a ditch through; no drafts, good ventilation; eggs fertile; tested out; over eight dozen chicks, all formed, dead in shell; some shells pipped; hatched 50; all living, doing well. The white skin was tough and when I struck egg with knife, shells would fly off, leaving chick inside white skin like a ball. Heat, first

week, 102½; second, 103½; third, 103; never under 102½ or over 104. What caused so great a death rate? Got 15 Rocks from 65 fertile eggs, and 35 Reds from 70 eggs. A. E. W.

No. Milwaukee, Wis.

Answer:—Lack of moisture in the egg chamber. You did not cool your eggs down enough.

Editor American Poultry Journal:

Dear Sir: As I am a subscriber to the American Poultry Journal I wish you would answer the following in the July number of the Journal: (1) I have several little chicks that have what appear at first to be little warts on their heads; it first starts like a very small wart, white and then turns black on the end; then it grows larger and spreads out and when I pull off the scabs it bleeds very freely and seems to spread worse. It starts sometimes under either side of the beak; sometimes on top of the beak right at the front end of the comb; sometimes just under or over either eye—causes the eyes to look watery and finally grows all over the eye and closes it up. It is hard at the root but a little spongy on top until it forms a scab which is hard but there is no matter comes out but bleeds very freely if you take the scab off the end.

Only my young chicks from one week to three months old are affected this way. Older ones seem immune; when once it starts it will spread to the whole brood, proving that it is contagious.

Now please tell me the cause and what it is and a cure for it? Do you think it is a constitutional disease and do you think it would be safe to breed from a cockerel or pullet that has had it and over it?

The chicks will live for weeks with it, eat well and seem perfectly well until it closes up their eyes or gets into their mouths and then they can't eat and will die.

We have a great many mosquitoes and heavy dews in the spring, summer and fall which the natives here give as a cause.

I feed my chicks for the first four weeks on rolled oats and Purina chick feed,

occasionally beef scraps, beef meal and corn meal mixed dry with enough water so they can pick it up; after four weeks I add whole wheat and Purina scratch feed. I put epsom salts, copperas and carbolic acid in their water occasionally but they still get this sore head or, what is it? (2) Would manufactured beef scraps fed in the summer time have a tendency to heat the chick's blood too much and cause the sores—or would rolled oats be too heating? W. Y. G.

Jacksonville, Fla.

Answer:—(1) Your chicks have chicken pox. This is usually due to damp, filthy quarters or to the introduction of an infected bird into the flock. Either of the following remedies will be found very effective. Frequent applications of carbolic ointment or glycerine containing two per cent of carbolic acid. Another treatment is to bathe the affected parts with warm, soapy water in order to soften the crusts, and afterwards apply a solution of sulphate of copper (blue-stone), a dram to half pint of water. The feeding of sulphur will also be found very beneficial. Wherever possible the birds should be moved into new and unused quarters and the houses and yards thoroughly disinfected with a 10 per cent solution of carbolic acid. (2) No.

Editor American Poultry Journal.

Dear Sir: Please advise me in the next issue of your Journal what is the cause of and a good remedy for chicks about two weeks old that have weak legs? What will prevent this? Also is there anything that will make feathers grow? That is, on old chickens that have had them pulled off by another one. By so doing you will greatly oblige. A. W. S.

Chicago, Ill.

Answer:—Leg-weakness is usually caused by improper heat in the brooder. Scatter their feed in a litter so that they will have to scratch for all they get. This will strengthen their legs and will usually overcome any tendency to leg-weakness. A tablespoonful of common baking soda to two quarts of their drinking water will also be beneficial. We cannot recommend anything that will make feathers grow.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue the following question: My sister has a flock of some 50 fine Plymouth Rock hens that have some disease among them we can't understand.

PURINA CHICKS

LIVE
THRIVE
WIN

What about your little chicks? Do many of them die? Or do they all live and develop into strong, thrifty birds? If you're having chick trouble TRY PURINA CHICK FEED. It checks mortality and makes 'em grow. IT NEVER FAILS. It DOES save little chicks. Purina Feeds are scientifically balanced. They contain the very best grains, each kind in the exact quantity, to build strong bodies and glossy feathers. Purina fed chicks INVARIABLY WIN the creamy prizes at the shows. Dozens of the best breeders have proved this. They give BABY CHICK FEED for the first two months, then PURINA SCRATCH FEED and PURINA MASH. The price is less than others and the quality better. Remember this, Mr. Breeder, feeding is as important as breeding. Using Purina Feeds will make all the difference between success and failure. DON'T EXPERIMENT! Purina is safe, sure and economical.

PURINA MILLS

Pittsburgh Perfect

The One Poultry and Garden Fence that has Every Good Quality and Not a Single Bad One

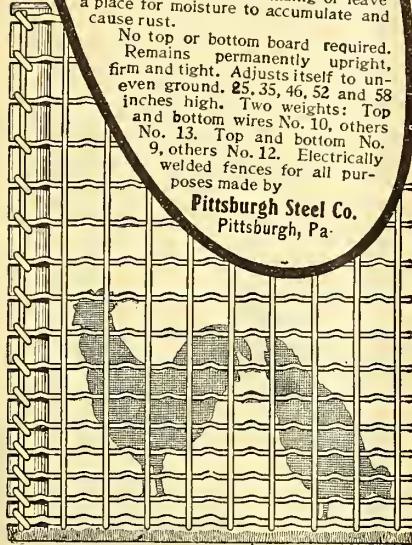

The really one feature that makes this perfect fence is the WELD. The whole fence is one solid piece of metal—wire.

No wraps, no projections, smooth, firm and solid with spaces so close that the smallest chick cannot get through.

The "PITTSBURGH PERFECT" is made by the only process known that does not crack the galvanizing or leave a place for moisture to accumulate and cause rust.

No top or bottom board required. Remains permanently upright, firm and tight. Adjusts itself to uneven ground. 25, 35, 46, 52 and 58 inches high. Two weights: Top and bottom wires No. 10, others No. 13. Top and bottom No. 9, others No. 12. Electrically welded fences for all purposes made by

Pittsburgh Steel Co.
Pittsburgh, Pa.

First the hen will seem to lose her poise or balance, and the body will stand nearly erect with the egg end dragging on the ground, and will continue in this condition two or three weeks with appetite good all the while. Then she will die. There has been two or three hens at a time afflicted in this manner since early spring. The flock roost in a fine new poultry house, well ventilated. They have free range, and are fed corn in the ear, which they pick off of the cob at will. There are ears of corn lying around on the ground all the time. The hens are quite fat, but have laid fairly well all the season. Can you name the disease and give the cause and cure?

Toledo, Ohio.

Answer:—Your fowls are in an over-fat condition from feeding too much corn. Stop feeding corn and feed good whole wheat and oats, and only what the fowls will eat up clean twice a day. If you continue feeding corn in the manner you describe your fowls will get in such a diseased condition they will not be fit even for table use.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) My bird became sick and I found it crop-bound and I was compelled to cut the crop, and found therein, mixed with the food, a lot of worms, 4 inches long or more, and they passed through in the droppings and would be alive. (2) When is a cock too old to breed from? Madison, Fla.

Answer:—(1) Worms are usually caused by feeding the fowls too much meat. A few drops of turpentine placed on a small piece of lump-sugar and dropped down the throat of the fowls will generally rid them of all worms. (2) After the fourth season.

Editor American Poultry Journal.

Dear Sir: Please advise me through your question and answer columns how much water glass is used to a gallon of water to keep eggs and how long will they keep.

Corry, Pa.

Answer:—To each 10 quarts of water add one quart of water glass. If kept in a dark, cool place, they will keep from nine months to a year.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber for your valuable paper and think it the "best," would like for you to answer the following questions in your next issue: (1) Should Rose Comb Brown Leghorn chicks when feathered out have any white on wings or body, and are such birds fit to save for breeding purposes? (2) When selecting White Wyandotte pullets and cockerels to breed from, should they be free from any dark feathers? (3) Will White Wyandotte pullets that are snow white and show no dark feathers molt out pure white? (4) I have a R. C. B. Leghorn hen that has had roup for two months; side of head swelled and eye closed most of time; don't get any better, but eats well. Should I kill her or try to cure her?

Macy, Ind.

Answer:—(1) White in part of the plumage of a Brown Leghorn, except in under-color of hackle and saddle and one inch or less at base of sickles primaries of cock birds, is a disqualification. Birds showing white in plumage,

other than mentioned above, should not be used for breeding purposes. (2) Yes. (3) Not always. (4) Kill her at once.

Editor American Poultry Journal.

Dear Sir: Will hens lay as many eggs the third year of their lives as in the second year of their lives? Or at what age are hens no longer profitable for laying? P. S.

Traer, Ia.

Answer:—As a rule they will not. The second year is the most profitable. After the third year they are not profitable as egg producers.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your question and answer department: Where shall I write regarding the Silver Laced Wyandotte Club? W. H.

Chicago, Ill.

Answer:—A. C. LeDuc, Chenoa, Ill.

Editor American Poultry Journal.

Dear Sir: Kindly publish the answers to the following in July issue: (1) Instead of dropping off in their egg yield when the cold weather starts, my hens have dropped off when it got warm. I feed oats, wheat, and very little corn. I also give them a mash once, sometimes twice a week, consisting of vegetables, etc. They seem to do better when penned up. (2) A two-months-old chick got a blister at the base of its neck the other day, which caused it to stagger around like it was dizzy. I opened it, finding it contained nothing but air. It seems to be all right at present. What was the cause? (3) Are Guinea eggs running fertile now? Bellevue, Pa. W. J. Jr.

Answer:—(1) This is usual with nearly all flocks. Hens generally lay heaviest in the spring months when the weather is moderate, and, of course, this is the natural breeding season. (2) This is what is known as a "wind tumor"; the exact cause has never been discovered. The remedy is to pick the skin with a needle and allow the air to escape. If it again accumulates, cut out a small diamond-shaped piece with a pair of sharp scissors and anoint it with vaseline. (3) We are unable to say.

Editor American Poultry Journal.

Dear Sir: Have seen in this department where people asked if such and such a formula was good to get eggs. Your reply has been in many cases: "Yes, but do not force them." Will you give me a formula which does force them regardless to the after effects of the hen's health. N. W.

Salem Depot, N. H.

Answer:—There is too much of this done at the present time, with the result that the health of the stock is impaired. This unhealthy stock gets scattered over the country and is used for breeding purposes by the amateur with results that are disastrous to his hopes and pocketbook. He becomes discouraged with the business and instead of being a "booster" for the poultry industry he becomes a "knocker." Therefore, we refuse to be a party to this method of "forcing" fowls by publishing a formula of this character.

Editor American Poultry Journal.

Dear Sir: Please tell me in the next issue of the Poultry Journal what is the

Watch for Mites

Spray Lee's Lice Killer into every crack and crevice of your poultry house. Paint it on the roosts. Don't let lice and mites get a fast-hold this year. Lee's is the original liquid lice killer, strongest and best. No hand-lining, dusting, dipping or greasing. It kills them all. Price \$1.00 per gallon. One gallon express prepaid, \$1.25.

Geo. H. Lee Co., Omaha, Neb.

cause of young chicks getting gapes. Some people around here claim one cause for it and some another, so I would be glad to have an opinion from you folks, and also a good cure for them, if you please. We have been bothered so much with gapes this summer and nothing seems to do much good. C. E. R. Edinburg, Va.

Answer:—Gapes is caused by the parasitic worm known as the *Syngamus trachealis*, which is a small round worm, red in color, and both the male and female are found attached by their mouths to the mucous membrane of the bird's trachea. The female is slightly more than one-half inch in length, while the male is only one-fifth inch. Young birds become infected with this parasite either by eating the adult worms, containing the eggs, which are coughed up by affected birds, or by taking the embryos with the food or drink. When the adult egg bearing worms are coughed up by diseased birds, the worms are eagerly seized and devoured by chickens or grown fowls. In such cases, while the worm is no doubt digested and destroyed in the alimentary canal of the chicken, the eggs which it contained are hatched and some of the embryos find their way to the trachea of the bird. To remove these worms from the wind-pipe of the chicks there are several good extractors now being advertised, any one of which will do the work.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: (1) I bought a setting of Rose Comb Brown Leghorn eggs. I got one brown chick and one black one out of it. The black one's legs and feet are heavily feathered. Is there any way to explain this? I wrote to the party three weeks ago and received no answer. (2) The brown chick has bunches growing on its legs just below the joint. They look like corns and hurt when touched. Can you give cause and remedy? Mrs. H. L.

Benton Harbor, Mich.

Answer:—(1) There is only one explanation. A mixture of foreign blood. (2) We are unable to say.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your July number: (1) What is the cause of air collecting under the skin of a little chick? (2) What is the trouble with three weeks old chickens that droop a day or two and then die at the rate of four and five a day? They have no lice and I have greased their heads; they have plenty of pure clean water and all the grit they want. I have been feeding poultry foods and I feed a balanced ration chick food; they have good clean house and plenty of green grass and clover. S. T.

Odell, Neb.

Answer:—(1) Read answer to W. J., Jr., in this issue. (2) This is probably due to a chill, but there are so many reasons for this that we are unable to say what the exact cause is in your case.

We cannot suggest a remedy. We can only say for you to look for the cause; when this is removed you will have no farther trouble.

Editor American Poultry Journal.

Dear Sir: Will you be so kind as to answer the following questions: (1) What is the proper feed for little goslings when hatched and until they are six weeks old? I fed hard boiled eggs with cracked wheat, oats, and corn fed dry, but they do not seem to do well; have water and grit at all times. (2) Is there any cure for cholera in little goslings and is it caused from feeding too much corn and other grains?

Oakfield, Wis.

Mrs. G. B.

Answer:—(1) From 24 hours after hatching feed a mash made of two-thirds bran and one-third meal, three times daily, all they will eat, adding a small portion of beef scraps after the third day. They can and will live on grass alone but will not grow so quickly nor so large. (2) Not that we know of.

Editor American Poultry Journal.

Dear Sir: Will you please answer these questions in your July number: (1) I hatched out quite a number of turkeys. They live for three or four days and then die. What was the cause? What is the remedy? (2) Should young ducks have all the water they want to swim in? (3) What kind of chickens are the best for market? (4) What kind of turkeys are the best for the market? A. A. K.

Manhattan, Will Co., Ill.

Answer: (1) Not knowing how you cared for your young turkeys, we are unable to give you any assistance. (2) No. (3) This is a matter of opinion and a question we cannot answer in these columns. (4) The same answer as question, (4).

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: In the March and April numbers of the American Poultry Journal, on pages 313 and 410 respectively, the use of moth balls for the destruction of lice is recommended by correspondents. Will you inform me of what substances these moth balls are composed? G. S.

Pudsey, Eng.

Answer:—Moth balls are made of naphthaline. They are formed into round balls about the size of a marble, and are used very extensively in this country to prevent moths from destroying furs and clothing.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in the next month's issue: I have some young ducks that get a kind of a foam in the corners of their eyes. I also had some chickens afflicted the same way several years ago. What is the cause and what would cure them? Thomasboro, Ill.

Mrs. J. S. S.

Answer:—This is caused by a cold, and unless it develops into something

serious would not advise giving medicine for it, as we do not believe in giving medicine to young ducks or chicks. If it does not get better get some one of the various roup cures advertised in these columns and give as directed.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: I had a fine Leghorn hen last year and her feet and head commenced swelling and her head swelled until she could hardly see. I put her by herself and she got some better, but never came back to her normal shape. I let her run outside and she laid as many eggs last winter as any hen I had. I feed on oats, wheat, peas and scraps from the table. Would you advise me to set her eggs or not? What

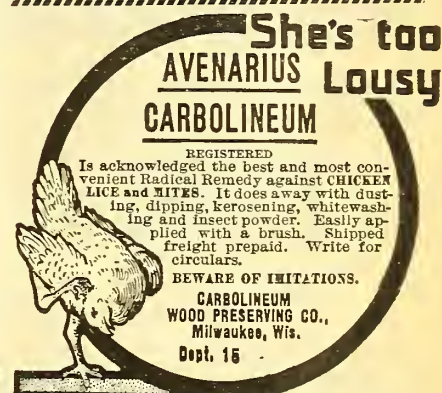

Help the Horse

No article is more useful about the stable than Mica Axle Grease. Put a little on the spindles before you "hook up"—it will help the horse, and bring the load home quicker.

MICA AXLE GREASE

wears well—better than any other grease. Coats the axle with a hard, smooth surface of powdered mica which reduces friction. Ask the dealer for Mica Axle Grease.

BIG MONEY IN POULTRY.

Our big Poultry Book with many new illustrations tells how to make it; also how to feed, breed, grow and market Poultry for best results. Plans for houses and a great mass of useful information. Tells how to start small and grow big. Illustrates and describes the largest pure bred Poultry Farm in the world; tells about our many varieties; quotes lowest prices on Fowls, Eggs, Incubators and Brooders. Mailed for 4c postage. **FRANK FOY, BOX T.B., DES MOINES, IOWA.**

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for hatching from my regular matings, \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100. From exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906

H. J. BLANCHARD

Box 997, GROTON, N. Y.

was the cause? Is there any remedy, and what was the matter? A. W. L. Roland, Ala.

Answer:—We are unable to say what the trouble was. Would not advise breeding from her.

Editor American Poultry Journal.

Dear Sir: Please find space in your next issue to following questions, as I am anxious for reply. I intend shortly to start a poultry farm of 600 laying hens and want to invest about \$1,500, which I think is sufficient capital for this amount. (1) Can I put 50 hens to pen and how much house space and yard

space will it require for this many? I have plenty of space and can give any amount you think is large enough. (2) How many houses will I have to build to accommodate this amount, 600, without crowding the least? (3) Give me a good feed for each pen each day and how much to each pen so I will not overfeed. (4) Which are best to start with pullets or hens and what age, if pullets? (5) How many layers can I turn loose on farm outside of these pens to run at large and will one house accommodate all or must I build several houses? (6) I intend to use Leghorns only, and is there any difference in laying qualities between

white or brown? (7) If you suggest pullets to start with, how long can I use them before they will go back in laying qualities—how many seasons? (8) Is there any average of eggs from 600 Leghorns fed properly and well housed and well kept? If so, kindly state average.

Memphis, Tenn.

G. F. P.

Answer:—In building your houses you should allow ten square feet for each fowl. Make the yards as large as possible; they cannot be too large. (2) You can make one house large enough to accommodate the 600, or several smaller houses. We would prefer about three houses for this number. (3) It is impossible for any one to give you this information. This can only be learned by experience. Some hens will eat twice as much as others, therefore no set rule can be given as to quantity to feed. Any one of the balanced rations now on the market will do all that is claimed for them. (4) Pullets, six months old. (5) We do not know how large your farm is, therefore cannot say. (6) No. (7) Two seasons. (8) We have no record of any.

Editor American Poultry Journal.

Dear Sir: I ask you to please answer this question: I have six fine Leghorn hens and one cock and I only get one egg a day, sometimes two. I have one hen that wants to set and I always heard that Leghorns never wanted to set. Do you think that these are pure Leghorns?

Vicksburg, Miss.

G. M. S.

Answer:—It is no uncommon occurrence for Leghorn hens to become broody, but they seldom make good mothers.

Editor American Poultry Journal.

Dear Sir: Please answer in your questions and answers column the following question: What causes white chicks to hatch from R. C. Brown Leghorn eggs? I have bred them for five years and never have had a single comb or a white chick until this year.

Orleans, Ind.

Answer:—This is caused by too close inbreeding. You should introduce new blood into your flock.

Editor American Poultry Journal.

Dear Sir: Will you kindly publish in the next issue of the Journal how many S. C. White Leghorns can be kept in a coop 10 feet long, 8 feet wide, 5 feet high in back, 7 feet high in front?

Missoula, Mont.

S. V. L.

Answer:—About one dozen.

Editor American Poultry Journal.

Dear Sir: Would be pleased to have your reply to the following in your next issue: (1) I have a Buff Leghorn hen that began swelling under her beak and between the wattles, and wattles also swelled until they looked as though they had been blown full of wind and were about ready to burst; enlargement was about size of hickory nut; wattles stood out to an angle of about 45 degrees and continued up the sides to her eyes, but did not affect her eyes; she breathed with difficulty. I examined her throat inside and outside, but could see no marks of any kind, as I thought she might have been bitten by some insect or possibly a snake. Hen was not sick, as she tried to eat but could not. After two days, during which I had the swollen parts covered with "Antiphlogistine," she recovered. (2) What causes newly hatched chicks to lay on their backs with their heads turned under and not able to get on their feet. Had only two this season, and, needless to say, I killed

PILLING CAPON TOOLS

On the market capons bring double price and are cheaper and easier to raise. Caponizing is easy and soon learned. A Pilling Capon Set will enable you to caponize all your young cockerels and add greatly to your profits. Sent prepaid with "easy to use" directions, on receipt of \$2.50. Anyone can do it. Write for free book on caponizing.

W. D. HOLTERMAN, Fancier, Box A, Fort Wayne, Ind.

them at once. My neighbor bought eggs from another party, having Barred Rocks, with free range, good, large, vigorous stock; she put them under a hen that could not have set better, but the chicks—all nice, large, plump little fellows, 11 of them—were all on their backs and of course had to be killed. (3) Is old bread soaked and pressed out a good feed to be fed once a day for either chicks or laying hens? L. W. R. Tiffin, O.

Answer:—(1) This was no doubt an injury of some kind. Frequent applications of hot water usually afford relief in 24 hours. (2) This is generally due to a sudden jarring of the eggs, either before or during incubation. (3) Yes.

Editor American Poultry Journal.

Dear Sir: Am a reader of your paper and would like to have the following questions answered in next issue: (1) I have a nice flock of S. C. White Leghorn pullets which began laying last December and have laid ever since, but along about the first of April I lost 8 or 10 by sickness, which to me seemed a strange disease. They would be all right and laying one day, and the next day would be dead. On opening some of them I found eggs all ready to be laid. They did not show sickness only about 12 or 18 hours; would not eat after being taken, but would drink lots. There was a man here that was pretty well posted on poultry and he came and examined them. He pronounced it sour crop, and on holding them up water would run out of their mouths. He advised giving saleratus once or twice a week, which I did, and did not lose any more. Do you think that was what was the trouble and the proper remedy? What is the cause of it? The gentleman did not seem to know what caused it. (2) I bought 30 S. C. W. Leghorn eggs from a very prominent breeder and exhibitor, one who takes lots of first prizes: paid \$3 per 15 eggs and several of the chicks have brown spots on the back of head, and one has a large black spot on back and one dark wing feather. Do pure bred fowls ever turn out such chicks? C. L. C. Lyndonville, N. Y.

Answer:—(1) Your friend no doubt knew what he was talking about, and as the remedy did the work, we would not suggest any other. This is usually caused by overfeeding. (2) All breeds of fowls will at times throw off colored chicks.

Editor American Poultry Journal.

Dear Sir: Please answer this question in your question and answer column:

I have a young turkey, now five days old, that has acted crazy ever since it was hatched. It keeps turning its head to one side all the time and often starts turning around and around till it falls over. It gets up then and goes on turning its neck. It eats very little, but does not appear sick, only that it seems crazy. Once in a while I have a chicken like this turkey. Please tell me what is the matter and if there is a remedy. My turkeys are bronze and are very strong and thrifty, and have free range. Santa Fe, Mo. M. V. D.

Answer:—We are unable to give any remedy. All chicks so affected should be killed.

Editor American Poultry Journal.

Dear Sir: Please answer the following: My turkey tom took sick; he drooped around for a week or so with his head down, had diarrhoea and his crop smelled sour; he would not eat; droppings were a greenish color. Could you tell me what was the matter?

Answer:—Gastro-intestinal catarrh or inflammation of the digestive tract. Put a handful of oatmeal in the drinking water or give milk to drink. Give a tablespoonful of olive oil as a laxative to carry off any irritating matter that may be in the intestines, then follow with $\frac{1}{2}$ to 1 grain of bicarbonate of soda and 2 grains of subnitrate of bismuth in a little water three times a day until recovery.

Editor American Poultry Journal.

Dear Sir: Will you kindly give me, through your questions and answers column, some information concerning a peculiar disease that my hens have been troubled with?

My hens are all yarded, but have a good deal of space, and are occasionally turned out into a meadow. All my houses are kept just as clean as possible and whitewashed often. All hens eat heartily and lay extra well. I feed them scratch food thrown into litter; feed meat scraps about three or four times a week, and some table scraps every day.

Every hen seems to be in absolutely perfect health, until they begin to get broody. Just as soon as they start to setting on the nest they begin to look droopy and at once a very bad case of diarrhoea sets in. The comb turns a dull purple and the feathers get rough. At first, before I knew what to do with them, I lost two of my finest White Wyandotte hens. I immediately set to work to find some remedy. I experimented by giving them first two drops of castor oil

and one drop of turpentine, and, following this, I made a gruel of one of the well known poultry regulators and gave them a teaspoonful three or four times a day and have succeeded in getting one hen well, after which I put some eggs under her and she brought off a good hatch. Another hen was entirely broken up from setting.

It would not seem so peculiar if this was the plain diarrhoea, and attacked the hens most any time; but the strangeness is that they are so perfectly well until they begin to set, and then it is not just so with a few, but with every one that begins to set.

Can you tell me what this is? What causes it? How can it be remedied?

Nashville, Tenn.

F. H. R.

Answer:—This is a rather peculiar case, and one that we would not care to venture an opinion on unless we were more familiar with it. Perhaps some of our readers who have had experience with similar trouble can answer.

Editor American Poultry Journal.

Dear Sir: Please answer in columns of questions and answers: My hens are comfortably housed, fed on dry feed, oats, wheat, corn, green bone and rape for green food. Bone is fed every other day, fresh ground. Hens have been laying all winter and spring. Eggs are fertile and hatch strong chickens. Lately hens have been slightly off on feed. Stand around with feathers below vent drooped and wet, sometimes bloody. Soon a red substance protrudes from vent. Then feathers become covered with slimy substance. Some continue to lay. None have died. Have killed three, and four more are afflicted. After a day or so there is an offensive smell. Combs remain red. Would be very grateful for information that would lead to prevention and cure, as hens are valuable.

St. Joe, Ind.

C. C. W.

Answer:—Vent Gleet. Fowls are sometimes affected with a contagious catarrh of the cloaca, which is transmitted from bird to bird during the act of copulation. The inflammation is usually confined to the cloaca, but in severe cases may extend to the mucous membrane of the lower part of the oviduct, or even to that of the rectum. In treating this disease the first thing to do is to reduce the inflammation and clean the parts by holding the lower part of the bird's body, including the vent, in a pan or bucket of warm water, in which has been dissolved a tablespoonful of bicarbonate of soda to each quart of water. The water should be as warm as can be comfortably

borne by the hand and the application should be continued for one-half to three-quarters of an hour and should be repeated daily while the inflammation is at its height. After drying off thoroughly with a cloth inject a tablespoonful of the following mixture into the cloaca: Water, 6 oz.; glycerine, 2 oz.; morphia sulphate, 1 grain; boric acid, 1½ drams. A pledget of cotton may be saturated with this mixture and placed in the cloaca two or three times a day, allowing it to remain until expelled by the bird.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in your next issue of the Journal: (1) I keep both the Barred and the White Plymouth Rocks and it is most convenient for me to let them run together. To use the eggs for setting, how long would they have to be separate so that the chicks would not be crossed? (2) What causes scaly legs? (3) Will lice powder take effect by simply sprinkling on the feathers or would the feathers have to be parted and the powder

sprinkled on the skin.

D. B. C.

Sherman Mills, Me.

Answer:—At least two weeks. (2) Damp, filthy quarters, or infection. (3) The powder must be sifted well into the feathers. This can be done by holding the bird by the legs, head downward.

Editor American Poultry Journal.

Dear Sir: Will you please state in your next issue the cause and cure for crop bound hens. We have had several to die with full crops. Is there any cure? Broughton, Kan.

L. F. H.

Answer:—Crop-bound is generally caused by the fowl eating too much dry grass or hay which will not pass into the gizzard, and also prevents the food from passing out of the crop. To relieve this condition pour a small quantity of sweet oil into the mouth and cause the bird to swallow it. Then manipulate that portion of the crop nearest the throat by careful pressure and squeezing between the thumb and finger in such a manner as to break up the contents of the crop and force it towards the mouth in small portions. Suspend the bird's head downwards from time to time and press the loosened particles of food towards the head so that they will escape from the mouth.

Editor American Poultry Journal.

Dear Sir: Will you please answer these questions: (1) I have some Silver Laced Wyandotte chicks hatched and the heads of some are a brownish-red color. Is this just their "chick" color or will they outgrow this color as they develop their feathers? Or is the trouble with their parent stock? Their father is a good bird, bred from a good strain of stock. I got him when he was a cockerel last fall and the man from whom I got him said he scored between 91 and 92. (2) Ought pullets' eggs hatch as well as hens' eggs? I have a pen of Wyandottes made up of 3 pullets and 1 hen, mated to a cockerel. In the first part of the breeding season I got much better fertility in the hen's eggs than in the pullet's eggs. Can you tell me why it is? The pullets were hatched about May 15, 1906. (3) What kind of a mating do you recommend—cockerel-pullet, cock-pullet, cockerel-hen, or cock-hen? W. P.

Greenwich, Conn.

Answer:—(1) These will no doubt feather out all right, if the parent stock were standard bred. (2) In the early part of the season hen's eggs always hatch better than pullets. This is because the pullets are not fully matured. (3) Cockerel and hens or cock and pullets.

Edgar Briggs, New Rochelle, N. Y., informs us that he has just issued another edition of his book, "Profits in Poultry Keeping Solved," and has enlarged it to a considerable extent. Anyone who follows the instructions given in this book cannot help but make a success of poultry keeping. Send for circular and other information, and mention American Poultry Journal.

The great annual money-saving sale of J. C. Fishel & Son, Hope, Ind., is now in full blast and anyone who is desirous of securing some White Wyandotte breeders at prices that anyone can afford to pay should get into communication with this firm at once, as the supply will not last long at the prices they are quoting. Write today and mention American Poultry Journal.

Stock—single birds, \$2.50; pairs, \$4.50; trios, \$6; pens, \$10. Mammoth Pekin Ducks: Stock—single birds, \$3; pairs, \$4; trios, \$6; pens, \$10. Toulouse Geese: Stock—single birds, \$4; pairs, \$7; trios, \$10; pens, \$16. Mammoth Bronze and White Holland Turkeys: Single birds, \$5; pairs, \$9; trios, \$12; pens, \$18. Prices for varieties marked with a star as follows: Single birds, \$4; pairs, \$7; trios, \$10.

Our prices for eggs are as follows: Eggs from all varieties marked with a star, \$2.50 per setting or \$4.50 for two settings. Eggs from all other varieties, \$1.50 per setting; \$2.50 for two settings, with the exception of the following varieties, namely, Partridge Plymouth Rocks, Silver Pencilled P. Rocks, Partridge Wyandottes, Silver P. Wyandottes, Columbian Wyandottes, Golden Polish and Silver Polish. Eggs from these birds we will furnish at \$2.50 per setting. We also furnish eggs from White and Pearl Guineas at \$2 per setting of 13 eggs. Of these nine last named varieties we will sell eggs only.

We have thousands of birds bred on the same line as these prize winners. Do not hesitate to order direct from this ad. Send for our special prices, also for our free catalog. Enclose 10c stamp to cover mailing.

Write us for circulars and special prices on our improved Great Central Incubators and Brooders, the most dependable and surest hatch machine on the market. Insure your success by hatching our eggs in our incubators and raising the chicks in our brooders. This is a winning combination. Address all our correspondence to Freeport.

THE F. W. NIESMAN CO., Box 40, Freeport, Ill.

WHITE DIARRHEA.

I see the poultry world is trying to find the cause of white diarrhea. I have been raising chicks for twenty-three years with incubators and brooders. I have raised many broods and lost my share. I can mostly locate the trouble and it is this—a CHILL. It may be but slight, but cold is the cause fully nine out of ten times, and sometimes the teuth is chill. Look at this example just last week. I have a very good machine with deep nursery. When the machine is full of chicks they have done very well, down so far, for they warmed the machine fully, but I put forty eggs I wanted to separate from about sixty, all R. C. Browns. I did not think at the time that the few would be too cool in the deep nursery, as the weather is warmer, too, but I found they huddled together, were not quite warm enough. They were put with a good hen and are dying daily. Those left in the machine, where they were almost too warm, are all living.

This has been the rule always. Whenever the chicks have been a little too cool from any cause they will die.

I found that the first three days are the danger days especially. Often when chicks are ready to come from the incubator it is the very coldest weather—those cold, stormy, dull times. To avoid such loss I use an old incubator, putting brau on the bottom with feed and water. I have left a few in it for seven days, but mostly three days, and they very seldom die. There will always be a few weak ones that will die and at times the feed may be a bit musty. Two years ago I started four brooders full in a warm room. All did exceedingly well, but the last was in May and the weather warm. I got careless of the lamp. One night it burned dry. The chicks were about three to five days old. They were not cold, but not warm enough. Three-fourths of them died from that little coolness.

My rule is to avoid, as much as possible, all chilling. You will make a surer thing of your chicks and avoid much white diarrhea if you have a warm room for the first ten days. You need not have an outer run for this time, but later you must or you will have leg weakness and lose them, when the loss will be greater. A chill in human beings always causes a stopping of the digestive function, locking up most of the secre-

tions. A chill produces the same effect in the baby chick. This is why part of the yolk is found in them when a week or more old. The digestion was very small, and the chicks are too young to recover from the congestion. The liver is congested or locked up, very little if any bile is secreted, therefore droppings are white.

Keep the chicks warm every minute for two to three weeks and longer; keep them growing with proper feed and your loss should be small. W. W. KULP.

FATTENING FOWLS FOR MARKET.

It is a well known fact that many fowls sent to market are in a very poor condition. They are picked up as they run and sent to market, when a little trouble and time would greatly add to the profits.

When you are ready to sell the chickens put them in a small, clean yard, with just room for them to move around in.

Give them all the water they will drink. Put in plenty of grit for them and begin feeding them all the cracked corn they will eat twice a day, and once a day give them a feed made of cornmeal and wheat middlings, half and half, mixed in water enough to make a crumbly dough. Keep the fowls eating for two or three weeks, and you will be surprised at the number of pounds gained.

Chickens fattened this way are very fine and juicy and command the very highest market prices.

Ducks and geese can also be fattened this same way, but as turkeys cannot endure confinement, they cannot be fed this way.

Feed turkeys a lot of shelled corn and they will soon become very fat if fed two or three weeks.

If more people would follow this plan there would not be so much half fattened poultry on the market and more profits would repay the feeder.

McComb, O. CHESTER G. WOLFORD.

CHICKS CRAWL BACK IN SHELLS: EGGS AGAIN.

Strange Story of a Late Spring in Pennsylvania.

Rossville, Pa., May 18.—“Speaking of the backward spring,” remarked Abe Wells, as he sat in Hetrick’s store the other day, “it is doing scandalous things up our way.

“I started my incubator along about the time that I thought the winter was over, and a few weeks ago there was hatched out the finest lot of chickens I have ever seen. Every one of them was healthy, and I figured out a large profit.

“Then we had the snow storms and the cold weather. Those chickens were astounded at the way the weather acted. They did not die, but acted sort of foolish.

“The cold weather kept up. Finally those peeps became convinced that they had arrived a mite too early, and nature told them what to do. Instead of growing they began to get smaller and smaller, until they were no bigger than the day they were hatched. They lost all their pin feathers and retrograded until every one was covered with down.

“Then the amazing thing happened. Hunting up the incubator, the whole lot settled down in the heat, and in less than two days shells had grown over them. I opened an egg yesterday, and, bless me, if it wasn’t as fresh as the day I put it in.”—N. Y. American.

Live Harness

Don't allow your harness to dry up and die. Once this happens it can never be remedied. Save the harness, save expense, prevent accidents by using

EUREKA Harness Oil

Nourishes the leather and keeps it soft and strong. Preserves the grain-fibre. Makes leather proof against all weathers. Gives best tanner's finish.

Boston Coach Axle Oil

smoothes the way to good wheel-action. Better and cheaper than castor oil. Will not gum or corrode. Lightens the load—eases the road.

Sold everywhere—All Sizes.

MADE BY **STANDARD OIL COMPANY** Incorporated

Written for American Poultry Journal by Charles J. Pilling, Lansdowne, Pa.

There are two distinct benefits to be derived from caponizing. First: The quality of the meat is so vastly improved that the size of the capon is not nearly doubled in weight, Fig. 1, but the value per pound is also nearly doubled over the ordinary rooster. Second: By retain-

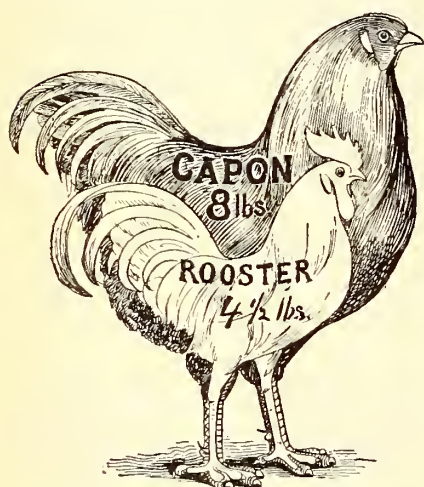

Fig. 1. Comparison between capon and rooster.

ing only the very best of the roosters for breeding purposes and caponizing the balance it becomes much easier and more certain of improving the quality of the flock. These two reasons particularly apply to the farmer and the general poultryman than to the fancier, because the farmer and poultryman every winter carry through at a loss more cockerels than are needed for breeding.

The two questions about caponizing that are most generally asked are the following: First—Can I easily do it my-

Fig. 2. Capons never do this.

self? Second—What is the best time to caponize? Answering the first question, the writer would say that in conversation with many caponizers he finds that the operation, after it is learned, takes from three to five minutes, depending

upon the expertness of the operator and the kind of tools he uses. One of the most expert operators that we have had the pleasure of talking with says that he can caponize at the rate of sixty per hour providing another fowl is ready for him as soon as he had finished the preceding one. In our opinion none of our readers can expect to caponize at this speed and there is really no use in trying to do so, but three to five minutes to a fowl is plenty of time and is considered a fair speed for the average caponizer.

In answer to the second question, the time to caponize depends more upon the size than the age. The average rooster should be about two and one-half to three months old. The rooster that is too young is rather difficult to caponize and after he becomes too old there is less chance of success, therefore the right time is the few weeks that he is changing

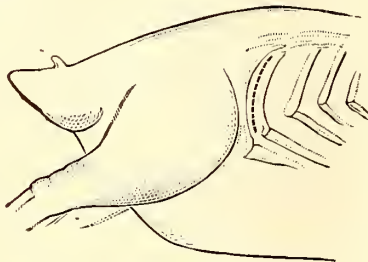

Fig. 3. Dotted lines show where incision should be made between first and second ribs.

from the gawky chick to the young rooster.

It is astonishing how little is known about capons. Hundreds of well informed people seem to think that the capon is some particular breed, perhaps some novelty or some freak. They do not seem to know that the nations of Europe, noted for their strict economy, have been caponizing for hundreds of years and in many instances these foreigners do it with the crudest tools.

Shakespeare, in his play, "As You Like It," speaks of the capon as follows:

"And then the justice,
In fair round belly with good capon
lin'd."

American ingenuity has perfected easy tools to use for caponizing, so that it is far easier to perform the simple operation now than ever before.

A small cut is made between the last two ribs, Fig. 3, well up towards the back, and the testicles may be taken out with either the twisting scoop or canula, Fig. 4.

Of course in every neighborhood we have a Mr. Lazy Bones who says that he can not have the bother of making capons. You will also find that this same

individual also does not have time to cultivate his ground, keep up his fences, take care of his implements; to this class of people we do not recommend caponizing. Then comes along some other man, who says caponizing is cruel. This man has probably never seen caponizing performed or he would notice just as soon as the fowl is caponized he begins to eat and drink just the same as before, going about the yard as though nothing had happened.

The operation of caponizing is not as

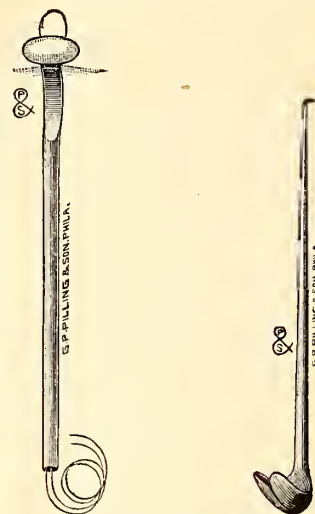

Fig. 4. Canula and Twisting Scoop.

cruel or painful to them as any one of the hundred of fights, Fig. 2, they would get into if they were un-caponized.

It will be found that by caponizing the surplus young roosters and keeping them, mind you, not until they are three or four months older, but until they are fully matured, their value in many instances is double. We do not mean that the weight is actually double but we do mean that the weight combined with the extra value of the capon meat makes the fowl nearly double its former value. The larger the capon the more per pound he is worth, and as capons are good foragers, devoting all their time to eating, digesting and growing, they become an additional source of large revenue to the poultry raiser.

After selecting a good set of tools, and this is just as important as to have other good tools and implements for farm and garden work, pick out a clear day and then get your chicken catcher, which every poultry raiser should have and is here illustrated, Fig. 5.

By the use of the catcher the fowl is easily caught. Select one or two young roosters, that will make good broilers; kill them and then try to caponize. The reason we suggest this is because, like

Fig. 5. Chicken Catcher.

every new work, the beginner feels somewhat clumsy and perhaps a little nervous at first. You can take all the time you want on this your first caponizing lesson. After you are through they are just as good for cooking as though you had not tried to caponize them. Do not be discouraged if you have not quickly succeeded this, your first time, but after

you have done it two or three times it will be surprising to see how much nearer an expert you become each time.

Another advantage of becoming an expert caponizer is that such a person can make from \$5 to \$15 per day as a professional caponizer for his neighbors.

If you caponize your own fowls you can also do it for the entire neighborhood or county, not only getting the profit but also assisting your neighbors in making money from their own poultry. Just think, the first fifty or sixty fowls caponized for your neighbors will more than pay for the caponizing set and all the work done after that will be profit.

The demand for capons is increasing enormously all over the country. Do not be misled by the word Philadelphia Capon because it is an extra fine bird. The supply does not keep up with the demand and in consequence the finest trade in the large cities sometimes pay as high as 35 cents per pound for capons because they are so scarce. Of course, the usual price is 20 to 25 cents per pound for the largest capon.

Male calves and lambs are castrated because castration makes better food and for exactly the same reason all cockerels not needed for breeding purposes should be caponized. The tender, delicate quality of young chicken flesh is continued, but it becomes, if possible, more tender after caponizing, very much richer, and of a very delicate flavor. The capon stores in fat so that when he is cooked this fat seems to blend with the meat, giving it a most delicious flavor. The flesh of bulls, rams and roosters is liable to be dry, stringy and muscular, whereas castrating when young makes the growth of not only a larger quantity but of a very decidedly delicate and superior quality of flesh, and for this the very highest prices are paid.

A good set of capon tools may be bought for about \$2.50. This may seem a little high, but do not try to caponize with cheap tools, remembering in the long run that the best are the cheapest. This is especially true of instruments, under which caponizing tools may be classed.

To sum up the whole matter of caponizing we would say that any live, wide-awake farmer or poultryman or his son can easily add caponizing to his poultry business and increase his profits from \$100 to \$500 per year, depending upon the size of the flock. If he cares to buy additional roosters and caponize them so much more may be added to his profits.

Buy your tools from a reputable maker, read the directions carefully and then make money.

AGRICULTURAL EXHIBIT IN CHICAGO.

Here is something different, yet practical—a permanent exhibit of things agricultural. The idea is to have on daily free exhibition almost anything from husking mitts to manure spreaders. This practical idea has been worked out and is now an assured fact.

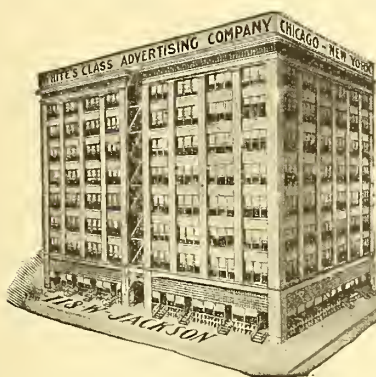

The exhibition will be held in the commodious new quarters recently acquired by White's Class Advertising Company, 118 West Jackson boulevard, Chicago. This company, of which Mr. Frank B. White is president, occupies the entire top floor of the "Electrical building," corner Jackson boulevard and Desplaines street.

The exhibition hall is 88 feet by 50 feet, in the eastern half of the floor.

It is light, airy, and very pleasant. Each exhibit will be enclosed by a neat metal railing and be kept in show condition for daily inspection. A special attendant will have oversight of the articles and will devote his entire attention to explaining their merits and use to visitors and purchasers.

This is an excellent opportunity for manufacturers who advertise direct to consumers, yet sell through dealers throughout the West. Chicago is a great trading center and many excursions daily bring great crowds of pleasure-seekers, dealers and business men from all parts of the Ohio, Missouri and Mississippi valleys. If they know of this exhibition many will visit it, learn the good points of the articles they are interested in, and make arrangements for purchase.

Being thus represented also saves manufacturers the expenses of a Chi-

cago office and a special salaried representative.

The sizes of spaces run in multiples of 5 square feet, from 5x5 up to 10x20 or more, as desired.

An attractive folder entitled "Would You Like to Have Your Goods on Display in Chicago at a Very Low Cost?" will be mailed free by White's Class Advertising Company to anyone. It has a map of Chicago's business section, with railroad depots, hotels, prominent clubs, elevated railroads, etc. It also shows a large ground plan to scale of the exhibition hall, with full detailed explanations.

Our readers, when in Chicago, are urged to visit this novel exhibition. They will be courteously received and all questions answered by the gentleman in charge. Much that is profitable can be learned from the exhibits of new, novel and practical articles that relate to agriculture.

Owen Farms, Vineyard Haven, Mass., have just issued a 12 page special sale list which contains some wonderful bargains. We doubt very much if ever before was such a list of quality birds compiled, and prices have been made but a fraction of their worth. Send for one of these real bargain lists and mention American Poultry Journal.

J. W. Eastes, Galesburg, Ill., the man who is making a specialty of breeding Orpingtons, is having a closing out sale of Buff and White Orpingtons this month and is offering them in pairs, trios and pens at prices to suit. You will find this stock equal to any and the prices much lower. Better write him at once and get first choice. Mention American Poultry Journal.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton St., Chicago, Ill.

IN CANNING TIME.

Summer, with all its beauty, brings much work in its train. Just at the time when we would most enjoy a shady nook, a hammock and a good book, come the luscious berries, which must be taken care of while they are in their prime, if we would have good things to eat during the stormy winter months. The "good old ways of our grandmothers" are very well in theory, but in practice we of the newer generation could give them many pointers as to easier and quicker ways of doing our work. To be sure, the modern kitchen offers conveniences which, could they be transported to the homes of our ancestors, would seem fit for a queen's kitchen. It is to be doubted if even the queen of proverbial fondness for her kitchen and a diet of bread and honey could have exhibited the labor saving devices with which the poorest kitchens of today are equipped.

Among the labor saving methods of the present time none are more marked than those connected with canning, preserving and jelly making. Instead of the slow, hot, trying hours of labor over the kitchen

stove, Madam puts her uncooked fruits into the jars, sets them to steaming, and goes her way rejoicing. Steam cooking, sun preserving, and cooking for a time, followed by immersion in boiling water, all have their advocates, and this month we give in condensed form the various methods, any of which, if carefully followed, will assure success. In this connection, will some one who has a fireless cooker tell us of her success—if it is not possible to use it in canning fruits? There seems to be no reason why it should not be practical, and it would certainly be a great saver of time, labor and fuel.

Two Methods.

Some cooks prefer putting the prepared vegetables in the jars and filling them with cold water. Put on the rubbers and tops, screwing the latter only half way down. Set the jars on a rack in the boiler and fill it with cold water nearly to the covers of the jars. Bring it to a boil and let it boil for twenty minutes. Then tighten the tops as much as possible before removing the cans from the hot water.

Another method of canning fruit has

been tried with great success, and presents even less work than the one previously given. The proportions of sugar and water given above apply to this as well. The fruit must be absolutely dry and should be under-ripe, rather than over-soft. Fill the jars, pour in the heated syrup and screw on the tops. Set the jars in large crocks, but do not let them touch each other. Pour in boiling water until the jars are covered, place a cover tightly over the jars and over this throw a heavy covering, such as carpet, an old quilt, etc. Let them stand for twenty-four hours. Tighten the jar covers before removing them from the water. If the jars are set on folded cloth, or a rack, so that they will not rest on the cold bottom of the crock, there is almost no possibility of their cracking when the boiling water is poured over them. This method is especially good in canning the small fruits and berries.

Sun Preserved Fruits.

The popular pictures of the ebony colored twins who are supposed to do your work for you have been superseded, in the minds of many housewives who prefer light to darkness, and "let the sun do their work," especially in preserving time. Sun preserved fruits seem to hold the aroma of the fresh berries in a way unknown to cooked fruits, and are rapidly taking their place in many homes. Large, perfect berries should be used. For every pound of strawberries, which have been carefully washed and hulled without bruising, allow three-quarters of a pound of sugar, arranging berries and sugar in alternate layers in a preserving kettle. Do not use too much at a time, as the weight crushes the berries. When the bottom of the kettle is covered with juice, cook slowly for fifteen minutes, removing all scum, but do not stir. Pour onto large platters, to the depth of an inch, and place in the sunniest spot in the yard, covering with mosquito netting to keep out flies. See that the netting is lifted so that it does not touch the fruit. If the dishes are placed on a table, and the table legs are set in dishes of water, no ant or other insect can crawl up into it. Bring the fruit indoors not later than five o'clock, before the dew begins to fall. Place in the sunlight the next morning and repeat until the syrup is almost jellied. Turn into jars without further cooking, cover the top of the fruit with melted paraffine, and put away in your fruit cellar until a snowy cold day next winter, when the berries will bring back memories of sunshine, flowers and bird songs.

Currant preserves are delicious, allowing pound for pound of sugar and berries. Cherries are equally good, when preserved in this way, and many fruit combinations can be made, among the best of which are currant and raspberry, gooseberry and raspberry, or gooseberry, green currant and red raspberry. This department has already given a red raspberry preserve which is worth repeating at this time. Crush the berries, the finest blades of the meat grinder being the best for this purpose, as every lobe must be broken or the preserve will not keep. Add sugar, pound for pound, stir it until it is dissolved, place the cold preparation in the cans, screw the tops tightly, and set the jars in the sunlight for three or four days. The fresh flavor of the berries will be perfectly preserved.

Two Methods of Canning Fruits.

The best known method of canning fruits, among the housekeepers of today, is probably by steaming. Those who are

KLEIN & ANDERSON, - MACON, ILLINOIS

so fortunate as to possess one of the modern steam cookers find their labors lessened by half, but these cookers are quite expensive and are not to be found in the majority of homes. Incidentally, they are one of the best investments a housewife can make, and those who own them find that their uses are innumerable. But a common wash boiler can be used to equally good advantage in steaming fruits and vegetables. Prepare a syrup by using as much sugar as would be necessary to sweeten the fruit if eaten fresh, and moistening it thoroughly with water. Place the fresh berries or fruit in the cans, filling them full, but not crushing the berries. Adjust the rubbers and place the lids on the cans, but do not screw them down. Of course the cans, rubbers and covers must be absolutely clean. Set the cans on a rack in the boiler and pour in enough cold water to come half way up to the tops of the cans. Cover the boiler, bring water to a boil and let it boil rapidly for five minutes. Take out three cans, drain off the liquor and fill two with fruit from the third. Fill the cans with boiling hot syrup, which has previously been prepared. A good proportion is seven pounds of sugar and five pints of water. Use cold water and stir over the fire until the sugar is dissolved, but do not let it boil. This will make five quarts of quite heavy syrup, and it can be prepared at any time, as it will keep indefinitely. This should be very hot when ready to pour over the partly cooked fruit in the cans. Screw down the tops, replace in the boiler and cook for ten minutes more, then remove and cool, seeing that the tops are perfectly tight. The fruit juice which has been poured off can be bottled and used later as a drink, or can be made into jelly by adding an equal quantity of sugar. Vegetables, such as asparagus, beans, peas, corn, etc., can be steam cooked by this method, first steaming the vegetables in the jars, then filling with boiling water and again cooking in the boiler, and will have all the flavor of the fresh vegetables.

EXPERIENCE DEPARTMENT.

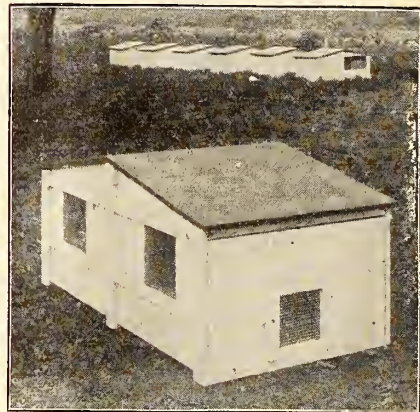

Mrs. A. J. M., of Goodland, Kan., writes: "Whenever possible in hot weather I like to prepare my meat so that there will not be a hot fire in the kitchen for several hours every day. We always have a good roast on Sunday. My favorite Monday dinner has for its meat dish mutton pilau. I cut the cold meat into cubes and stew it slowly in a saucepan with a bay leaf, two or three cloves and allspice, adding plenty of water and a cupful of washed rice. I let it cook slowly until the rice is done and the water is nearly absorbed, then lift out the meat and rice with a skimmer, add butter, thickening and a dash of tomato catsup to the gravy and pour it over the meat and rice on the platter. The family always like this better than the original mutton. Another good hot weather meat is prepared by mincing any odds and ends of left over meats, adding a teaspoonful of grated onion, one tablespoonful of minced parsley, and curry powder or horseradish, if the flavor is liked, a little melted butter and hot water enough to moisten it, but not to make it very wet. A few spoonfuls of left over gravy is an addition. Pack the meat in a tin, setting a weight on it, and let it become very cold and firm before slicing."

Mrs. L. R. R., of Upper Alton, Ill.,

says: "I wonder if all the readers of this department know what a delicious combination can be made by adding freshly cooked new potatoes to creamed peas or asparagus. It is one of our favorite ways of serving the early summer vegetables, and the recipe has been in our family since the days of my great-grandmother, in Vermont. It has a special advantage if the supply of peas or asparagus is insufficient by itself, as a little will go a long way when combined with the potatoes."

Mrs. B. N. G., of Holyoke, Mass., gives a hint which is equally good for summer or winter. She mixes lard, flour and salt in the proportions called for by her pie crust recipe, and keeps a quantity always on hand in the ice box. It takes but a few moments to prepare a pie when she comes home from a day's shopping, or company drops in unexpectedly. She also writes that she saves all baking powder cans, of various sizes, as well as the one and two pound coffee cans, and they are handy for steamed puddings or bread, as well as for molding jellies or packing ice cream and mousse.

Mrs. D. F. T., of La Grange, Ill., says: "Although I am a country woman, and

The non-crowding, fresh-air, perfectly sanitary Root Colony Coop, manufactured by the Root Incubator Co., Cleveland, Ohio.

a busy one at that, I see no reason why I should not serve my meals attractively. It takes no longer to place the dishes and silver in orderly positions than it does to throw them on any old way. And a few moments more in serving will add 100 per cent to the looks of the food. I invented such a pretty salad when friends drove out from town last week, just at supper time, that I really want to tell you about it. I always keep a bottle of salad dressing on hand, and add cream, either whipped or plain, to it when serving, as it takes away the 'raw' taste of the dressing. I sliced some bananas, added a few nuts from one of the trees which we planted on our farm when we first moved here, many years ago, placed the mixture on a large plate, surrounding it with a wreath of parsley and bunches of large, red currants. It looked almost too pretty to eat, but was nevertheless devoured to the last spoonful."

GOOD HOT WEATHER DRINKS.

Iced Tea—This is one of the most refreshing of summer drinks. Make the tea extra strong and after draining from the grounds let it get very cold. If hot water is not convenient, it can be made by pouring cold water on the grounds

Cash or Time Buys a FARM In Virginia

With cozy new 3-room cottage like cut, and 25 acres for poultry, fruit and vegetables. Only two miles from the live town of Waverly, on N. & W. Ry., midway between Norfolk and Richmond. Delightful climate, abundant water, unexcelled markets for produce. Splendid social advantages. "Go South—Young Man!" Write today for Booklets, lists of bargains in farms, lowest excursion rates, etc.

F. H. LaBaume, Norfolk & Western Ry. Box MT, Roanoke, Va.

and letting them stand half a day. Just before serving, fill thin glasses with chipped ice and pour over it the tea, serving sugar and thinly sliced lemon with it. Those who like the flavor of mint enjoy the tea if a sprig of fresh spearmint is placed in the glass with the tea.

Iced Blueberries—This is something out of the usual order of iced drinks. A mixture of rhubarb and blueberry juice, sweetened to taste, is poured over the chipped ice in the glasses and diluted with iced water.

Pineappleade—Boil together two cups of sugar, one quart of water and the thinly sliced peel of an orange. Let it cool, add the juice of one or two oranges and a grated pineapple, or the juice from a can of pineapple, and dilute with water to taste.

Fruit Drinks—These can be made in infinite variety by mashing a fresh fruit, adding sugar, straining off the juice, adding water to taste and pouring over chipped ice. The juice of a couple of lemons will give the finishing touch to the refreshing drink. One of the best fruit drinks the writer has ever made is a combination of lemonade with the juice left after canning plums. The flavor is especially good, and this drink, once served, will make a reputation for any hostess. Almost any combination of fruit juices makes a satisfactory iced drink, and an added touch is acquired by putting into the mixture a pint of strong tea.

GREEN CORN DELICACIES.

Every one likes green corn, but few people realize how many variations can be made in serving it. When tired of eating it on the cob, grate the corn and boil with a cupful of water and a teaspoonful of sugar. After cooking twenty minutes add a cup of milk, or half a cup of cream, thicken with a spoonful of butter and a little flour, and season with salt, pepper and a bit of red pepper pod.

Corn Fritters—To every cupful of grated corn allow one egg, a tablespoonful of milk, salt, pepper and a level teaspoonful of butter. To a quart of the mixture add a level teaspoonful of baking powder and enough flour to thicken so it will not be sticky when cooked, trying a little on the hot griddle to discover the amount needed. Cook on a griddle like pancakes and serve either with butter or maple syrup.

Baked Corn—This is one of the most delicious, as well as least known ways of serving fresh corn. Prepare the corn as in the first recipe, but instead of cooking it on top of the stove, pour the mixture into a tin and bake it in the oven. It is improved by adding two well beaten eggs.

Succotash—Cook lima beans and corn cut from the cob, until both are tender. Then mix, using one cupful of beans to two of corn, add milk, and continue the cooking for half an hour. Then stir in a tablespoonful of butter, the same of flour mixed with cold milk, season to taste, let boil up once and serve.

TRY THESE COMBINATIONS.

Blackberries and blueberries in a pie. A little rhubarb, or dash of lemon juice in particularly sweet blueberry pie. Gooseberries in strawberry jam, in the proportion of two quarts of gooseberries to five of strawberries.

Pineapple with pears, in the proportion of one-fifth pineapple.

ROOFING

Fifty per cent below dealers' prices. Less than half what shingles cost. Free Roofing Book tells just why you should use our roofing.

**5-ACRE
FARM PLOTS**

\$5 Down \$5 Monthly
NEAR ATLANTIC CITY MARKETS

The Garden Spot of America for raising early vegetables, fruit, berries, squabs and poultry is West Egg Harbor, New Jersey. Milder winter and earlier spring than farther inland. No severe weather. Plowing is done during winter. This means early in markets for highest prices with eggs, squabs, broilers and all produce. Best markets easily reached, but 17 miles from Atlantic City, the greatest resort in the world, and 38 miles from Philadelphia, on two main line railroads. Atlantic City's crowds eat best produce obtainable all times of year, regardless of prices.

These West Egg Harbor Farm Plots are on the outskirts of Egg Harbor City, a thriving city, about 3000 population, churches, schools, stores, banks, newspapers and extensive factories. Soil is rich, easy to work and highly productive, healthy climate, delicious water, pure air, good roads. We have a few 5-Acre Farm Plots for \$100; 1-acre gardens, \$35 each—payable \$5 down \$5 monthly. Title insured. If you cannot locate just now, buy for future use and investment. Write for handsome booklet and map.

DANIEL FRAZIER CO.

691 Bailey Bldg. Philadelphia, Pa.

Sliced oranges in tomato preserves.

Black raspberries with red, juicy cherries in sauce.

Pear jelly with a mixture of apple juice. It will retain the pear flavor. In fact, apple or crabapple juice with any fruit juice which does not jell well by itself is a sure and good combination.

LAUNDRY HINTS.

Flannels and woollens should not be touched with a very hot iron.

Save your tired feet on ironing day by standing on a cushion or folded carpet.

Children's clothes which have been dipped in alum water and then dried will not catch fire easily.

A tablespoonful of turpentine added to a boiler of white clothes will increase

sugar, raisins and vinegar, cook until the mixture commences to thicken, then add spices and cook until it almost jellies.

We have had the pleasure of examining a new and revised edition of the book entitled "Eggs and Egg Farms," published by the Reliable Poultry Journal Publishing Company, Quincy, Ill., and consider it unquestionably the most practical and authentic treatise yet issued on the important subject of the successful production of eggs, the construction plans of poultry buildings and the methods of feeding that make egg farming most profitable. A few of the subjects treated are: The breeding and feeding for eggs; the utility of different breeds as egg producers; preserving eggs; egg markets, etc.; in fact everything pertaining to egg production is

White Plymouth Rock chicks in the orchard of Chas. H. Ring, Decatur, Mich.

their whiteness, as will also a tablespoonful of kerosene.

A teaspoonful of powdered borax, added to the cold starch, will give extra stiffness to the linen.

A strong solution of vinegar and water will restore rusty black laces. After washing in this, dip them in coffee and iron while damp, first laying a piece of woolen over the lace.

RASPBERRY JAM.

When making jam this summer, add two cupfuls of currant juice to five quarts of raspberries. The flavor will be greatly improved.

SLICED CURRANTS.

Six pounds currants, four pounds sugar, one level tablespoonful cinnamon, one level teaspoonful cloves, two pounds raisins, one cup vinegar. Pick over and stem the currants, wash, drain and place them in the preserving kettle. Add

discussed in detail. The book consists of 96 large pages, is well illustrated, with heavy embossed paper cover, and is worth double the price asked for it, viz: 50 cents per copy. Send us your order and 50 cents and we will forward a copy immediately. Address American Poultry Journal, 103-113 South Clinton St., Chicago, Ill.

THE GAME COCK.

SOME MORE HISTORY; PAST AND PRESENT.

Written for American Poultry Journal by Dr. H. P. Clarke, Indianapolis.

"And some more martial are, But cocking fits a man for peace or war. It makes men bold and forward for the field And learns them there rather die than yield. Cocking does also constancy create And arms a man to wrestle with his fate. Be it more happy or severe, his mind Is still the same, to a brave end inclined."

Your contributor, the Rev. C. E. Petersen, is a very entertaining writer and his notes on the history of cock-fighting brought out some points of interest in relation to this sport as practiced by the great nations of antiquity. In this connection kindly permit me to call attention to one feature of the story which the reverend gentleman seems to have slighted or overlooked. Note the periods of time at which the Persians, Greeks and Romans took to the sport of cocking. In the case of each cock fighting was in vogue not in the early epoch of savagery nor yet in the years of senile decay, but just at the time when those peoples were at their best, when each in turn represented the very height of culture and refinement in the ancient world. I shall not attempt to philosophise upon the subject, only to note the curious coincidence that in each of these cases the neglect of cock fighting was marked by a pronounced loss of vigor and stamina in the peoples themselves. There are no game cocks at present in Persia, Greece or Rome, and those nations, even modern Italy, are all practically dead ones.

Your contributor quotes from my old friend John Harris of Cornwall. Permit me to follow that same trend of thought and quote still more from the same authority: "Your countrymen beat us all round now, in pugilism, pedestrianism, yachting, racing, etc. The American bred setter, Rob Roy, has recently beaten all ours to a stand-still and now we lose at our most ancient and formerly most popular sport of cocking. Truly our glory has departed, all through the laws suppressing our old outdoor manly sports. Statistics prove and statesmen deplore the physical decadence of the English race, easily accounted for when the masses are employed during the live-long day in crowded, ill ventilated, unhealthy factories and workshops, and half their nights (for want of healthier amusements) are spent in suffocating, crowded music halls and theaters amidst the heated fumes of gas, tobacco and beer, whilst the health-giving sports of our ancestors which fostered courage, endurance and resolution are denounced as brutish and unworthy of this Christian age. Boxing, wrestling, cock fighting must give place to pink teas and croquet till England gets in danger, then bring out our sickly youth, put a red coat on his back, clap him on the shoulder and say, 'You're a fine soldier,' and expect from him such deeds of valor as those that made the empire."

That was written several years ago. There may be hope for England yet if improvement continues. The very great popularity of the different English books on game fowls and the numerous reprints of Sketchley's "The Cockers" might perhaps be explained by the revival in old English games for exhibition purposes, but the continually

are winners and layers. Stock and eggs for sale. Write wants. Satisfaction guaranteed.

E. J. FISH, Strongsville, Cuy. Co., Ohio

increased demand for cocking supplies and the tone of the game chicken ads in British papers seem to tell another story. Look over the game liners of a dozen or more years ago and you will rarely encounter such expressions as "for pit or pen," "genuine pit bred," "dead game." See how common they are now. Does this change indicate anything? It certainly does.

Much has been written of late about race suicide and decadence of vitality in the French people. Both birth rate and vigor continue on the decline in France taken as a whole. One notable exception to the general rule is the extreme north, where the best physical specimens of humanity are to be found and where the birth rate is highest. Observe that this is the cock fighting country. Several fine new public cockpits are there announced, the largest of the new ones being in the city of Lille, and two weekly papers have appeared, "Le Coqueleur" and "Le Journal des Coqueleurs."

Now let us look toward home and observe conditions in our own thrifty young republic. If your contributor will take the trouble to inquire he may learn something more about that "Poultry Book" from which he quotes, namely: That the game section (Nos. 6 and 7) is no longer procurable, having been sold out some little time ago, while the rest of the work, or at least most of it, may still be had in the form of separate parts. That is one pointer. Here is another: The little booklet, "Rules of the Cock Pit," has rapidly gone through five editions of 2,000 each and the last is now exhausted, making a total issue of 10,000 copies. But perhaps the best indication of the prosperity of any enterprise is the status of its trade journals. Thirty years ago there was no paper in this country devoted exclusively to cock fighting. The first started in February, 1879. Twenty years ago there were three. Ten years ago eight. Now there are only six, but of this number there are three, each one of which enjoys a larger patronage than did the whole bunch of a decade earlier.

How about repression and restraint? In the state of Texas a license is required for a public cock pit, one to which admission is charged. In South Carolina a pit must be a certain distance from church or school house. Elsewhere throughout our great South and West if there are any restrictions upon the sport they are so slight and scattered as scarcely to be noticeable. Taking the country at large, a few gentlemen may get together with their birds almost anywhere between the campus of Cambridge and Golden Gate park. They do it, too, and the man who imagines for one little minute that this nation is made up entirely of simpering bromides and effeminate molly-coddles has certainly a lot to learn.

Where is it, then, that the sport of cocking is on the wane? I will tell you. In such places as Cuba, where the inhabitants are so lacking in patriotism and national pride that each political party would prefer to be ruled by an outlander rather than by his fellow Cuban of opposite view. Also in decrepit old Spain, senile and moribund. However, that ancient monarchy has braced up a very little since the loss of her colonies, interest in cock fighting has been reawakened to a small extent and a new book on

(Can furnish you winners for the fall fairs and early shows.)

O. A. BOGARDUS, Box 31, WARSAW, KY.

the subject recently printed in Madrid.

Talk about "The Fairy Tales of Poultrydom," did more fantastic hallucination ever come out of another corner of the effete and unenlightened East than this idea that cock fighting is all ancient history and a thing of the past?

P. S.—Since writing above I have learned that the last legislature of Texas passed a law prohibiting the sport after next July 12, which means that there will be no more publicly advertised cock fights in the larger cities of that state. H. P. C.

BROODING AND GROWING THE CHICKS.

Do not remove the chicks from the incubator until they are perfectly dry. If the heat has been right throughout the hatch they will be ready to be removed to the brooder about noon of the twenty-second day. Have the heat about 95 degrees and if the weather is cold you can let the heat run up to 100 degrees.

After the chicks are thirty-six hours old give them the first meal, which should be either rolled oats or dry chick food scattered over the litter of the brooder and give them fresh water to drink. Have this in one corner of the brooder, also have a small box of fine grit and chick size charcoal always before them.

A brooder should have at least two apartments, with a difference of about ten degrees. In such a brooder there is less danger of overheating the chicks, as they have a chance to get away from the heat if they like. The chicks must be watched very close the first few days, they must not be allowed to get too far away from the heat, as they may get chilled before they find the way back. Keep them confined to the brooder for the first two days. Remove the cover two or three times during the day, as some of the chicks will not come out often enough to eat if you do not.

After the second day make a yard outside of the brooder about three feet square and feed and water them in the yard. Have some kind of fine litter for them to scratch in and give them their chick feed in this. When you let them out the first time you will have to drive them back after they have been out a few minutes as they will not go back themselves and will very likely get chilled, but when they once learn where the heat is the chick door can be left open and you can give them a larger yard, and when they are one week old if the weather is favorable you can give them an outdoor run.

After the first week a little cracked wheat and cracked corn can be added to the chick feed, also hard boiled eggs chopped fine. After the third week give them a mash at noon. A good mash can be made as follows: Bran, corn meal, crushed oats with the hulls sifted out, a very little boiled potatoes, stale bread and cheese made from sour milk. This makes a good mash. If you do not have the cheese add beef scraps.

When the chicks are four weeks old feed three times a day. Wheat and cracked corn morning and night, mash at noon. As soon as the chicks are nearly half grown add oats to the morning and night meals. Keep grit, charcoal and pure water before them at all times. Reduce the heat in the

brooder gradually. When the chicks are six weeks old if the weather is warm they can be removed to outdoor coops. The best coops for this purpose are six feet long, three feet wide, three feet high in front, two feet high in back, two doors in front, 30x24 inches, one of glass and one of wire. The wire door should have a curtain of burlap to be used on cold nights. A small yard of one-inch mesh wire should be used until the chicks become used to the new coop. After the chicks are confined in this way three or four days you can then give them free range. Keep the floor of the coops well covered with fine litter and renew

ercise. Keep the quarters clean and the birds free from lice and you cannot fail to have success. C. W. Sixt.

West Point, Ohio.

THE MUTE OR TAME SWAN (CYGNUS OLOR).

(By Rev. Carl Emil Petersen.)

"The stately-sailing swan
Gives out his snowy plumage to the gale;
And, arching proud his neck, with hoary
feet
Bears forward fierce, and guards his osier
isle.

Protective of his young."

Thus sings the poet about a noble
bird that from time immemorial has

A White Plymouth Rock cockerel for which \$500 was refused. Hatched from eggs purchased from Chas. H. Ring, Decatur, Mich.

the litter often. Do not put more than fifty chicks in such a house and reduce the number as they grow.

After the chicks are four days old they should have some kind of green food every day. If they do not have a grass run give them chopped raw cabbage, lettuce, potatoes or any kind of green stuff.

As the chicks increase in age and the weather grows warmer you must look for lice. It is surprising how quickly lice will run a flock of chicks down. A very good way to clean chicks of lice is with insect powder, and the best and quickest way to apply the powder is with a lice killing machine. Dust them once a month. Give them good sound grain, pure water, shade, fresh air, ex-

been the bird of kings and princes and for a long time was only to be found in the palace grounds of the rich and affluent, and well do I remember, when a boy, how often I would wander away to the King's Garden at Fredericksburg and for hours at a time watch the flock of swans as they, with stately mien, sailed the waters, and coming in to the shore for the bread which I had brought with me and which I would throw to them.

So acquainted did they become with their daily visitor that they would come rushing toward me as soon as they heard my call, with expectations of their daily treat and their expectations were never disappointed.

was very extensive and in the center of it a small island on which the breeding houses were situated and in which were their winter quarters, and though every now and again a pair or two would leave at the approach of winter I was informed by the keeper that they always returned to their old abode in the early spring.

One peculiarity regarding their nesting habits was that they would prefer to build their nests among the reeds on the low shore of the islet, not in the water, but near it, and sometimes the nest would be lifted one foot or more above the ground, supposedly to protect it from heavy rains or the rising of the water.

But mostly the nest would be built in the places prepared for them, though at the time of incubation the male in particular grows very savage and will resent any approach to the best of his ability, and the same holds true when the young have been hatched by the female.

The male does not help her in incubating her eggs, the number of which will vary from six to ten, but he will remain by her all during the time of incubation, which lasts from five to six weeks.

The eggs are of a grayish-green color and the young when hatched is of a sooty-gray, which later grows into a darkish brown, and when I first saw the young of a swan my idea of the beautiful white swanlets was dissipated, though it is a very pretty sight by the way of contrast to see the parent swans with their flock of dark-colored young, which do not get their entire white plumage until at the end of from ten to twelve months, and they do not reach maturity until the end of the third year, the full maturity being generally indicated by the brightness and clearness of the orange on the bill, and full development of the knob or "berry."

It is not, however, generally known that the male swan will come to maturity a year earlier than the female, so a brood of young may be obtained from a cock in his second year mated to an old female.

Swans are not merely mated for a season but are actually husband and wife, and if not forcibly separated will stay together, as it says in the marriage rite, "until death us do part."

I have hinted already about the danger of approaching them during the time of the breeding season, and Mr. Yarrell, the noted English naturalist, mentions an instance where a pair of swans were swimming with their young and a crow made a descent and struck at one of the cygnets; the old male came to the rescue in a moment, seized the crow with his beak, pulled him into the water, and, in spite of all his buffetings and resistance, held him there till he was dead.

Mr. Dixon also mentions in his observations on the mute swan this danger of approaching their nesting places during the breeding season, and writes as follows: "It is better not to gratify any unnecessary curiosity respecting their eggs; indeed, the parent bird will hardly allow it."

"The cock makes great show, and often more than show, of fight against interlopers."

"A blow from his pinion on land is better avoided, and in the water he

would bother the strongest swimmer to escape from his fury.

"I was once attacked by a swan when walking too intrusively near his lady's lying-in bed; he was keeping guard by sailing in short tacks backward and forwards before her, but he left the water to give me a forcible hint to go about my own business."

"The only thing to do was to meet the threatened danger. So seizing his neck in one hand and his outstretched wing in the other, I tossed him as far into the middle of the stream as I could."

"He seemed a little astonished for a few moments, but lashing the waters into foam he would have renewed the attack had I not speedily withdrawn from his dominions."

The swan's movements are beautiful enough and much has been written about them in prose and in verse, but as to its physiognomy is not of the pleasant kind. There is a snakishness about its eye and head as well as neck that more than one observer has noticed and commented on. It is only when on the water that it becomes an object of beauty, but on land it is a clumsy bird in shape, even more so than the duck.

Rudiger, in his book of ballads, well describes part of above when he writes:

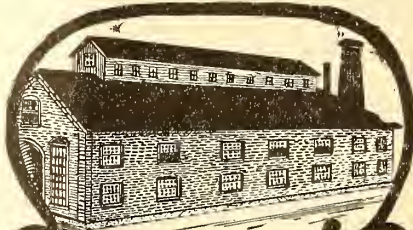

"The swan arch'd back, his snaky neck,
And his proud head reclin'd;
Between his wings, now half unclos'd,
Like sails to catch the wind."

"The waters yielded to his breast,
Protruded like a prow,
And still they roar'd as strong he
oar'd,
With sable feet below."

So indissolubly was the attribute of whiteness of plumage connected with the swan among the ancients that the idea of a black swan, as expressed in the well-known line, "rara avis in terris, nigroque similima cygno," was considered a mere flight of the poetic imagination and of no authority whatever.

Nevertheless, not only does a black swan exist but we have among our South American birds a white swan with a black head and neck, the lores and base of the beak red.

It agrees with the mute swan in

**CONGO ROOFING**

Congo costs little and lasts long, it keeps out the dampness and never leaks. The man who notices how his different roofs wear and how they protect the roof boards—the man who remembers or keeps records of costs and service, buys Congo. Congo is easy to lay. Nails and cement free. Every roll perfect. Sample free on request.

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES, 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

- a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.
- b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.
- c. Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.
- d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE
GUIDE IN THE BREEDING AND EXHIBITION OF PURE BRED POULTRY

Price \$1.50, Postpaid

AMERICAN POULTRY JOURNAL PUBLISHING CO.,
325 DEARBORN ST. :: :: CHICAGO, ILLINOIS

having the tail long and wedge-shaped, but differs in the scalloped margin of the web of the toes.

The entirely black swan is the Australian species, and differs from all its congeners not only in the predominant hue of the plumage but also by the young having feathered lores, and likewise by the extreme shortness of the tail and the crispness of the scapular and inner secondary feathers.

The naked parts of the head and the skin at the base of the beak are red and the feathers of the pinion white, but otherwise the bird is black.

The female lays from five to seven eggs of a dirty grayish color and smaller than those of the mute swan. It is heavy in its flight and so keeps to the water and marches more than the white, and it is much more gentle and docile in confinement than the white but much higher in price.

For the information of those that might be desirous of knowing the current prices for which swans may be obtained specimens can be bought at the following figures:

White swans, \$35 per pair.

Black swans, \$60 per pair.

Black necked swans, \$100 per pair.

And from this last quotation it seems that this South American species is the most rare to obtain.

The commercial value of the mute swan is not very great and they are not bred very extensively in this country, largely due perhaps to the fact that they are very susceptible to cold and wet during the first few months of their life, and are killed off by an inclement spring as easily as young turkeys.

Again the market for swandown is not the same as it used to be, for taking its place and much preferred, and the time for the swan-feasts where it was reckoned a delicacy to the partakers of their flesh is past, as the old fowls' flesh is dark and ill-flavored and the young simply passable and not at all in the same class with turkey, pheasant and chicken meat.

They are bred simply for ornamental purposes, and even here, considering the prices obtainable and the long time it takes to mature them, swan breeding cannot be considered very remunerative except perhaps in combination with other ornamental varieties and where space and care is of no consequence.

But notwithstanding the difficulty of rearing these birds in any large numbers it has, at least in England, been tried, and at one time there was a number of large swaneries on which the swan was bred very extensively, but the breeding was entirely appropriated by royalty and the aristocracy.

And it was ordered by law during the reign of Edward IV, who reigned in 1483, that no one who did not possess a freehold of a clear yearly rental of five marks was allowed to keep them.

The stealing of swan's eggs was visited with severe punishment and fined according to the king's will, and if any of the birds had been taken or snared the punishment was still more severe.

There were at one time during the reign of Elizabeth no less than 900 distinct swan-marks which were registered and recognized by the royal swanherd, whose jurisdiction extended over the whole kingdom.

It has been stated (though on uncertain authority) that Richard Caur

de Lion introduced the bird into England.

At this early time swans were one of the chief dishes at almost every feast and particular care was taken in the fattening and in the preparation of the carcass, and the swanpit of Norwich, where swans were fattened for the table, a recipe was sent out with the bird, and run as follows:

To Roast a Swan.

Take three pounds of beef, beat fine in a mortar;

Put it into the swan; that is, when you have caught her.

Some pepper, salt, mace, some nutmeg, an onion,

Will heighten the flavor in a gourman's opinion.

Then tie it up tight with a small piece of tape,

That the gravy and other things may not escape.

Mr. H. H. Coburn, Memphis, Mich., and one of his prize-winning Columbian Wyandottes—a cockerel perfect in wing and hackle.

A meal paste, rather stiff, should be laid on the breast,

And some whited brown paper should cover the rest;

Fifteen minutes at least ere the swan you take down

Pull the paste of the bird, then the breast may get brown.

The Gravy.

To a gravy of beef, good and strong, I opine,

You'll be right if you add half a pint of port wine;

Pour this through the swan; yes! quite through the belly,

Then serve the whole up with some hot currant jelly.

N. B.—The swan must not be skinned.

It is related that the oath "By heaven and the swans" used by Edward I that on the day when the king conferred the dignity of knighthood on his son, the Prince of Wales, 30 others were also knighted.

In the course of the high festival two swans richly adorned with gold net-

work were placed on the table, and the king made a vow to God and the swans that he would start forthwith to Scotland and never sheathe the sword till he had avenged the death of John (Red) Comyn.

Edward in fulfillment of his romantic vow went as far as Carlisle, where he was detained by sickness.

There is also a curious tradition regarding the mute swan that he never sings till his death; hence the old Nordish saying of a warrior singing his swan-song when deadly wounded in battle; but that this is purely legendary as regarding the swan all agree to, and even Pliny, who accepts most everything regarding men, animals and things, denies this death-song of the swan.

It is peculiar that it is only in a domesticated state that the so-called mute swan is mute, for in its wild state it will trumpet the same as a number of other species. Yet this may not be entirely well founded that the tame swan is entirely mute, for such excellent authority as the noted English naturalist, Mr. Yarrell, positively states that he at various times has heard the swan utter a low, plaintive, wailing note.

Another rather interesting incident was when Frederick II, of Brabant, instituted "The Order of the Swan" (1443) in commemoration of the mythical knight of the swan, which runs as follows:

That Helias, King of Lyleforte, son of King Oriant and Beatrice.

This Beatrice had eight children at a birth, one of which was a daughter.

The mother-in-law (Matabrune) stole these children and changed all of them into swans.

Helias spent all his life in quest of his sister and brothers that he might disenchant them and restore them to human forms, and upon this legend the king formed "The Order of the Knight of the Swan."

A number of noted men has been called by the name of this bird of renown:

Shakespeare was called The Sweet Swan of Avon.

Fenelon, Archbishop of Cambray, The Swan of Cambray.

Homer, The Swan of the Meander.

John Taylor, called "Water Poet," The Swan of the Thames.

Miss Anna Seward, poetess, The Swan of Lichfield.

Which certainly goes to show that the opinion of the swan being mute was not generally accepted, though the naming of these eloquent men and women of speech and poetry may be based on the common superstition of "The Hush-Song" might be written in the way of ancient swan-lore, but this will be sufficient for the diversion of a summer's day.

Miss Alice Hedges, Pana, Ill., breeder of White Plymouth Rocks, is offering some great bargains this month in breeding stock that scores from 90½ to 94½, by Heimlich. Don't miss this opportunity if you want something that will improve your stock or lay a foundation for a good strain.

This is bargain time. Note the offerings breeders are making this month. Now is the time to buy breeding stock of known quality comparatively cheap.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashers or cooking feed under this great system. Broilers go 1 1/2 to 1 3/4 lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months' old? If not, you have fed wrong. Failure impossible where my system is used. My 2d edition of 3000 copies, revised and enlarged, now ready. Write today and stop that big feed bill. Circular and testimonials free.

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cups. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N. Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

BANNER CHICK FOOD

NO GRIT OR OYSTER SHELLS

This is a complete prepared dry food for chicks from the time they break out of the shell till they can take corn, grain, and grit. All they need is plenty of fresh water and Banner Food to develop strong, healthy fowls. Banner Chick Food is composed of the exact and proper elements to produce best results in growth, as well as economy in buying. It is composed of kiln-dried Corn, Oats, Barley, Rice, Peas, Millet Seed, Beef Scrap, Charcoal, Beans, Flaxseed, and a variety of other seeds which are really the

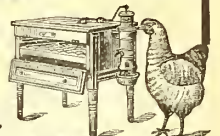

"back-bone" of the feed. If you want prize winners start your chicks on Banner Chick Food and you simply cannot miss. Order to-day. Price—1 lb. 8c; 3 lbs. 15c; 5 lbs. 20c; 10 lbs. 35c; 25 lbs. 75c; 50 lbs. \$1.35; 100 lbs. \$2.50. Write for complete catalogue of all poultry and pet stock supplies.

EXCELSIOR WIRE AND POULTRY SUPPLY CO.

200-EGG INCUBATOR \$12.80

This perfect 200-egg Wooden Hen at \$12.80 is a startling trade innovation. It will do the work of the most costly hatcher, and always keeps in order. Hatches every fertile egg. Catalogue with fourteen colored views sent free. GEO. H. STAHL, Quincy, Ill.

VIGOROUS CHICKS are the results of Petaluma Incubators.

They maintain Nature's conditions. They have no accidents, make no failures. Catalogue free. PETALUMA INCUBATOR COMPANY, Box 150 Petaluma, Cal. Box 150 Indianapolis, Ind.

NATURAL HEN INCUBATOR

200 Egg Size for \$3.00 Insures pure air, correct temperature through natural Hen heat. No lamps to smoke or regulators to adjust. Hen instinct controls the whole hatch from beginning to end; therefore, you get better results from your hatch. Agents Wanted. Catalog FREE. Natural Hen Incubator Co., B-4, Columbus, Nebraska.

THE OIL THAT'S RIGHT

Is the only kind you should use in your incubators and brooders. Many chicks are killed by the deadly fumes from ill-smelling, gummed-up, smoky lamps.

WYANDOT WHITE OIL is refined by special process, goes through the wick without clogging and burns with a steady flame preserving even temperature. Write for free circular and price. THE WYANDOT REFINING CO., Dept. A. Cleveland, O.

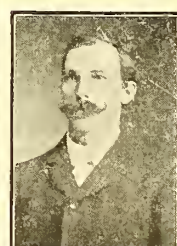

WHO IS THE JUDGE?

A sample of many letters received by us: Dec. 8, 1906. Steinmesch Feed and Poultry Supply Co., St. Louis, Mo. Gentlemen:—I have 200 matured hens and pullets, and yesterday collected six eggs. I have been using gritless feed. It does not produce results, and I will have to go back to the old reliable Steinmesch Select Hen Feed.

STEINMESCH Select Hen Feed

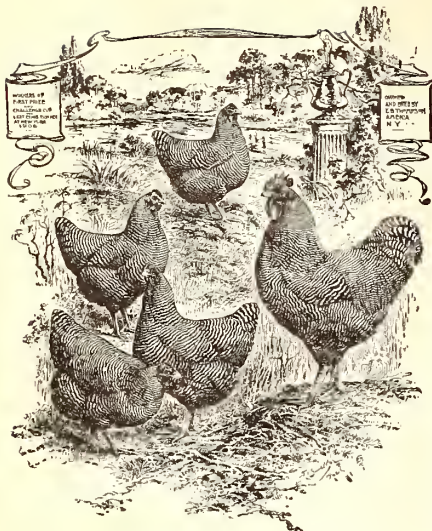

contains grit. It is a balanced ration. It's the best chicken feed that money, brains and experience can put up. It will make hens lay when all other feeds fail to produce results. No cheaper than other feeds, but better. Price \$1.75 per 100 lbs. We pay freight on 200 lbs. everywhere. Steinmesch's Feed & Poultry Supply Co. 301 Market St., St. Louis, Mo. Our catalog is free to all. Write for it.

MONEY PLANTED WITH ME GROWS

You can buy baby chicks for less money than good eggs cost. Leghorns, White and Brown; Rocks, White and Barred; Wyandottes, White; Minorcas, Black. Send for circular.

One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

Box B, No. Adams, Michigan

**World's Foremost
White Wyandottes**

Have won the very highest honors at New York, World's Fair, Boston and other leading shows; have sold winners for all the prominent shows in U. S. and Canada; many owe their success to my strain. 15 years line bred for vigor as well as fancy points. **REMEMBER**, all stock returned at my expense if not satisfactory. I have some grand early birds. I am breeding Columbian Wyandottes on same lines as the White Wyandottes.

J. H. JACKSON - Lock Box 88 - HUDSON, MASS.

S. C. W. Leghorns

Stock and eggs at reduced prices. For sale: 50 fine exhibition hens, 4 yearling cocks. March hatched cks. from exhibition matings that are dandies. Eggs \$1 per 15, \$5 per 100 from exhibition matings. My stock has won the blue ribbons in strongest competition for 7 years. Write for prices to **W. L. FERN, ELGIN, ILL.**

The Best Trap Nest Made

is the **ACME**, because it does not frighten the hens that use it. Remember that the hens do not have to be COAXED or TRAINED to use the **ACME**, because all that is required of the hen is to walk into the **ACME** like she would to use a box or barrel nest. It is simple in construction, easy to operate, safe, roomy and comfortable. It is well ventilated and darkened. It never fails to trap the hen, and the weight of the hen when she enters nest throws the trap. No wires to push against, no tilt board, no springs, no pulleys, no weights to get out of order. Your money back if not as represented. Cat. free.

ACME TRAP NEST CO. - BEDFORD, INDIANA

S. C. BLACK ORPINGTONS

EGGS \$5.00 per sitting.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$1000 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans' **Toronto.** Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Pembroke, Maine

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

\$5 THE CYCLE HATCHER \$5

Is The ALL METAL, FIRE-PROOF, HATCHING WONDER

you have all heard of, or at least dreamed of. It takes up almost no room and hatches more chicks than half a dozen hens, with less trouble than the care of one hen. The nest, Heater, Lamp, Thermometer and Automatic Appliance to let off the surplus heat, make a complete Hatcher that can be operated by any child.

INCUBATOR, 50-EGG CAPACITY, \$5.00—BROODER, 50-CHICK CAPACITY, \$5.00

Write at once for further particulars.

THE CYCLE HATCHERY

879 North Leavitt St., Chicago, Illinois

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used for ceiling and siding. It comes to you straight from our own factory.

Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated as shown in illustration, sheets 22x24 inches, \$1.65. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the

interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

We will supply you with a fine ceiling, as shown in illustration, all put up at 100 square feet, in sheets 24 inches wide and 6 feet long. They are excellent for siding.

Nothing "spruces up" an old building more than some brick siding. It makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building. We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices to these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron

BRICK SIDING, \$1.95

pipe and fittings, plumbing supplies, nails, etc.

Guarantee is back of all we sell.

CENTRAL MACHINERY & SUPPLY CO., 549-559 STATE ST., CHICAGO

MODEL INCUBATORS AND BROODERS

I can help you make a success in the poultry business, whether it's a hundred hens for your own table-supply or fifty thousand layers for large commercial purposes. My experience has been so broad, so varied; I have "come up against" all the "ins and outs" of hatching, brooding, feeding and marketing of poultry that many say I am an authority on profitable poultry-raising.

As a proof, my Model Poultry Farm was a profitable success in six months. I now have poultry there numbering

80,000, Hatched and Brooded

in my famous Model Incubators and Brooders. Buying your incubators and brooders of a man who knows nothing—or very little—about hatching and raising poultry is running a useless risk. Don't do it. I not only sell you a Model Incubator or Brooder but I add to them the valuable experience of years as shown in their construction. Model Incubators show excellent hatches—hatch every hatchable egg. The Model Brooders grow sturdy chicks. Remember, my interest in you doesn't cease when I ship you a machine and get the money. You buy a part of my time and are cordially urged to write me and ask all the questions you wish. I'll stay by you. Send your order today and get in line with the profit-getters. Free catalog for everyone.

CHAS. A. CYPHERS,

301 Henry St.,

Buffalo, N. Y.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1½ to 1½ lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months' old? If not, you have fed wrong. Failure impossible where my system is used. My 2d edition of 3000 copies, revised and enlarged, now ready. Write today and stop that big feed bill. Circular and testimonials free.

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cups. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N.Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

IN THIS SALE

Which will last thirty days, I shall sell choice females in lots for practically one-half price, and males to mate with them the same. I have hundreds of young coming on, and they will take room to round out, for I look to see them come to the best stock I ever had and fanciers know what this means. I will be ready to ship young in show birds and breeders in August. I am out for blood this season, and my customers will get their share in the winnings, for I Can furnish them.

ARTHUR G. DUSTON, Box 1020, So. Framingham, Mass.

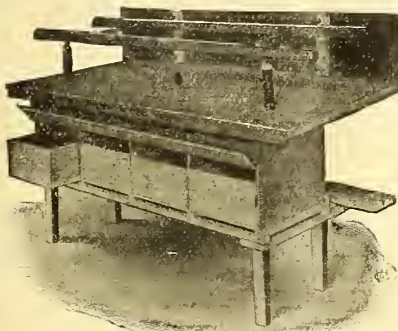

The Breeder Who has made Possible the World's best Flocks of White Wyandottes

That Lousy Hen House

Why not get rid of those lice and mites that infest your house and fowls, keep them from laying and in an unhealthy, unnatural condition? You can have a complete, convenient and sanitary hen house. You can have healthy hens, get more and better eggs and save time and labor in your work if you but use Potter sanitary, vermin-proof fixtures. You can have pleasure and profit in poultry raising; not loss and discouragement.

DON'T BUILD

that new hen house or think of fixing up the old one until you have seen our latest and best catalogue. It tells all about the Potter Fixtures; our double vermin-proof and exterminator roosts (sure death to lice and mites); our "Simplex" trap nests; improved W. P. attachment, etc. It shows fixtures in three styles and twelve different sizes; 64 large pages and over 50 illustrations. It has cost us hundreds of dollars, but we send it free to you for two cents to cover postage. Write today and learn how to save time and labor with this 20th century line of up-to-date henry fixtures.

NOW'S THE TIME

to learn the Potter System of profitable poultry culture. Hens "dry up" the same as cows. Do you know why and how? Our system teaches you fifteen different ways of making more money on your poultry. Hen selling time is coming, but "DON'T KILL" a laying hen, or sell any hens until you know just their condition.

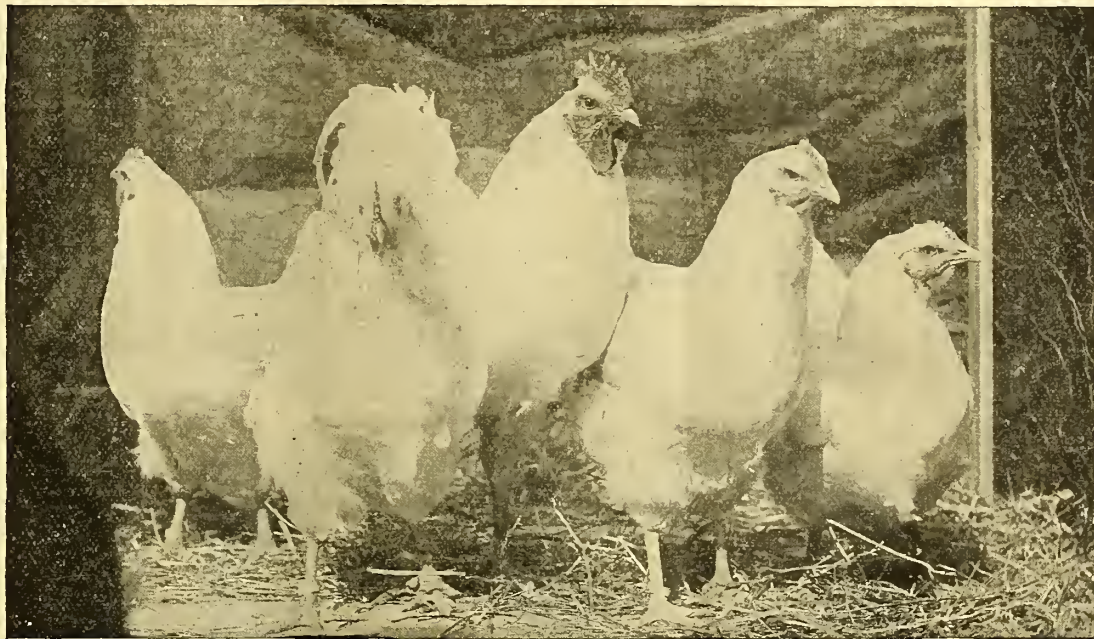

... THE ... POTTER SYSTEM

teaches you how to pick out every laying hen in your flock. You can keep fewer hens, get more eggs and make more money on your poultry if you know the Potter system.

Write today for printed matter and learn what prominent judges, breeders and editors think of our wonderful discovery and its great value to poultrymen.

T. F. POTTER & CO., • Box A, DOWNERS GROVE, ILL.

.....BETTER THAN EVER.....

Never before has such quality shown up as is in my chicks this season. I have about FIVE HUNDRED EXTRA EARLY hatch chicks that have quality enough to win anywhere. Why let your competitor win over you when for a few dollars you can "snow him under."

U. R. FISHEL'S W. P. ROCKS

Remember that we will immediately send you

MONEY BACK ON ANY GOODS NOT EXACTLY AS REPRESENTED

We are a reliable, responsible concern—do just exactly as we say we will. Your home banker anywhere, or any business house can tell you that.

Established in 1885, we are doing business every day direct with users all over the United States. Our Millwork and all our goods are best made—of best material—by best workmen—in largest mill in the world—163,000 square feet (4 acres). As we own our own timber lands, saw mills, factories, and carry large stocks, we can ship promptly. (We don't sell rough lumber.) Buying direct through our catalogs, which explain and illustrate everything, you save all middlemen's profits.

SPECIAL PLANS AND BARGAINS for POULTRYMEN and TRUCK FARMERS

Before you plan any improvements in Colony Houses, Brooder Houses, Hen Houses, Out Houses, Houses, Burns or any building or repair work, write for our Free Millwork Catalog, which explains all about the best plans for any purpose. Don't forget that from a 2-cent paint brush—or 500 feet of paper at 33 cents—or a colony house door at 65 cents—to everything in Millwork for a \$10,000 house, we can and will save you Half or More than Half—and we are the only concern that can. Investigate. Write to-day. It means DOLLARS SAVED and kept in your pocket for you.

Storm Sash 64c

13-8 inches thick, glass 10x20, four lights. All sizes equally low. Less than half what you usually pay. Regular Price \$1.50

All Storm Sash made with extra wide side and bottom rails allowing room to fit outside casing or to cut down to fit smaller openings. All extra strong and substantial for weather and cold protection. Great fuel savers.

Storm Doors Only \$1.19

Regular Price \$2.25

All Storm Doors of high quality. Strong and durable.

Save price 4-Light Storm Sash, 64c each, soon in fuel alone. Ready to put up. Order early before frost.

Flint-Coated Fire-Proof Rubber Roofing

Per Square, 108 Sq. Feet.

- 1 Ply—\$1.41 per square
- 2 Ply—1.96 per square
- 3 Ply—2.29 per square

All you need is a hammer to lay it. Nails, metal caps and cement furnished FREE with each roll. Lasts a lifetime.

This Fine Window

4-light—strong—high quality window. Prompt, safe delivery guaranteed. Sizes and full description given in FREE catalog. Costs you only . . .

THE MATING OF THE BREEDS.

Some of the Common Errors in the Mating of the Grand Old Silver Gray Dorking and How to Avoid the Going to Pieces in Color of This Splendid Breed of Fowls
—While Double Mating Is Not Necessary Line Breeding Is Very Essential—Even a Slight Deviation From the Proper Lines Disastrous—The Importance of the Female Line Here Shown.

Paper No. 8—The Silver Gray Dorking.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Dorking, the pride of England and the standard by which the market poultry of the world is judged, has at no time been a popular fowl in the United States. An English fancier who was visiting this country said to the writer last winter: "Conditions are not the same here as with us in England. I see plainly why you people do not breed to Dorking extensively. You Americans are too impulsive and impatient. Now the Dorking is the finest table fowl in the world. There is no doubt about it. But as it is not a rustler, able to do fairly well in egg production when given the scanty care the poultry of the United States is mostly given, you folks do not handle it. You could not, it would seem, concentrate your efforts in the production of either an egg machine or a market fowl. You must have what you call a general purpose fowl, something which you have not—never will have." And the Englishman spoke the truth. The Dorking is essentially a market fowl, and why we of this country do not specialize as they do in England tells the whole story of the Dorking's slight recognition here. Yet, with good care the Dorking is a pretty good egg machine, as its feeders will tell you.

The Silver Gray variety is the most popular, and throughout the eastern states is bred to a considerable extent. The Dorking exhibition at New York and Boston is always large, and birds of the best type are found in these shows.

A few years ago it was conceded by the Dorking breeders of this country that we could not produce as fine Silver Grays as could the English fanciers. It was held that this was due to the fact that our climate was unfavorable. But of late years Watson Westfall, of Pennsylvania, and Henry Hales, of New Jersey, have shown specimens of their own breeding which here easily defeated some of the crack show birds of the mother country.

The Dorking is one of the most valuable and beautiful of all fowls, and will always occupy a very prominent place in the poultry world. Watson Westfall, the veteran breeder and fancier, tells us how to produce the best Silver Grays:

"The Silver Gray Dorking is a well established breed with a distinct type and character. Although they do not require any double or extreme mating to produce fine birds of both sexes, it has become known for some time that certain selected birds, bred in what I will name as a three-cornered mating, will produce the highest type of exhibition stock, and also a better and more uniform flock generally. In selecting the male preference should always be given to those nearest to standard requirements, as the best exhibition bird is always the one best to breed. With the female, however, there are two selections to make, viz., light and dark, the former to be for producing the best males and

the latter best females, and it is for this reason I have given the name a three-cornered mating. The dark female which, like the male, is a standard exhibition specimen, will be among the darkest of the flock and her general color (top color) a slaty or silvery gray. The light female will be among the lightest of the flock and her top color an ashy gray. In making selections for these two classes of females a very good way is to catch and hold them together, comparing in this way their wings, back, breast, head, throat, and hackle. The wings and back of the darker female should be slaty or silvery gray, and the penciling or mottling extremely fine, being always as free from the shaft lines as possible. The breast should be a rich, bright cherry red, free from any mealy shading or edgings of a lighter color. Head and throat should be silvery white and as entirely free from any brown as possible. Hackle should be silvery white and a clear and distinct black stripe through the center of the feathers.

"The wings and back of the lighter female should be an ashy gray with penciling or mottling fine and as little of the shaft lines showing as possible. Breast should be a light salmon red, quite free from mealy shading or edgings of a lighter color. Head, throat and hackle should be silvery white, the upper part of the neck, the throat and head to be nearly clear white and the remainder of hackle as free from black as possible. A fully matured male bird should be as free from black on his white parts as possible and also as free from white on his black parts as possible. The white should not show creamy or rusty and the black should have the greenish shade. In form always get the largest body with the shortest legs. These two characteristics are of the utmost importance and it is quite natural for one to follow on with the other just the same as in the opposite where long legs give a small body. As a farther aid in making selections I will make the following list of defects which are to be avoided. First, the male: Overly large combs, irregular forms or short fourth or fifth toes, off side spurs, long legs, prominently white earlobes, stripy or short hackle and saddle, short back, high carriage of tail or any scanty appearance in its development. The females: Overly large combs, irregularly formed or short fourth or fifth toes, long legs, short back, fan shaped tail, also high carriage of tail, any very noticeable marking of brown on head, wings or hackle, very patchy or uneven color on breast."

NEW EXPERIENCES EACH YEAR.

Written for American Poultry Journal by E. E. Whitney, Ann Arbor, Mich.

Anyone who must write for publication a certain amount every day during July and August has my sincere sympathy. Contributions are usually scarcest during hot weather and perhaps I may be able to furnish some copy which will prove acceptable at this season.

Instead of making up forms, reading proof, boiling down manuscript, correcting mail lists, setting advertisements, wrapping papers, packing mail sacks, writing, clipping, pasting, etc., as I have many times done in such weather when part of the help were taking their vacations and the remainder had much more than usual to do to get the paper out on time—instead of this I can sit down under the maples, spruces, elms, walnuts, fruit trees or lilacs and see the growing corn, wheat, oats, clover or potatoes and the barred and buff and white fowls scattered about in every direction. I can sit down and enjoy this because I must favor an injured foot. Thus I have also opportunity to write.

Every year we have new experiences with poultry. Last

year we separated our breeding hens January 20 and started incubator March 2. This year we thought we would start later and save extra labor. Separated hens February 20 and started incubator March 13. And even then we had most unfavorable weather in April for little chicks. Our incubator chicks hatched April 4 to 6 did not do near so well as some hatched by hens about a week later which had to be kept in the barn for several days and coops covered with blankets every night even in the barn.

Last year we began the selling of little chicks; sold 205 at 10 cents each. This year we sold 265 and hatched seventy chicks for a neighbor at 5 cents for each live, healthy chick delivered, he furnishing the eggs. We think this pays better than hatching and trying to raise more than we can properly care for.

Last year we got 523 chicks from 843 eggs; this year 605 from 909 eggs, and 100 purchased eggs only gave us twenty-three chicks. Last year the percentage hatched was about 61; this year from our flock about 72 per cent. We use both hens and incubators. The incubator gets more live chickens from a given number of eggs, but the hens care for the chicks better than brooders with us, and save much time and labor.

We plan to set seven or eight hens three or four days after starting the incubator, and as soon as the incubator is empty take eggs from hens and finish in incubator, thus saving the crushing and killing of some chicks by the hens. When two or three days old we put them under the hens at night and let the hens help raise them. Better that hens should hatch eggs and rear chicks than to be broody half

overfat, not as troublesome when broody as the Buff or Barred Rocks.

I do not claim that this breed excels the other two in every particular. More white ones die or are killed in some way. Out of fifty-nine Buffs hatched we raised fifty-five; out of fifty-five White Wyandottes we raised thirty-four.

Another new experience this year was using a hot air incubator, one which a neighbor could not operate successfully. My wife tried it, finishing eggs from three or four hens. It worked all right. Then she started it with seventy eggs and hatched fifty-seven chicks.

We have had lots of hot air and water this month. Eggs might hatch with a thermometer only. We took off last chickens for the season June 30.

SUCCESSFUL ADVERTISING.

Reasons for Success and Failure in the Poultry Business—Advertising Must be Backed by an Honest Policy on the Part of the Advertiser—

Selecting the Proper Medium—Constant Advertising Brings Success.

Written for American Poultry Journal by Hervey H. Hoyt, Portland, Ore.

Advertising has in the last generation developed into an art. To advertise successfully requires skill, sound judgment and experience. Advertising has brought wealth and fame to many who otherwise would have remained poor and unknown. On the other hand, injudicious advertising has ruined many business careers. Most all successful business men advertise in one way or another. The larger concerns of the country employ competent men, who devote their entire time and energy to this department alone.

In this day of close competition, when almost every profession and business is more or less overcrowded and so many are in the race for the same prizes, the twentieth century business man, whether he be a dealer in diamonds or stocks or fowls, cannot sit down quietly in his snug corner at home and expect business to come his way. Competition is too close for that. The modern business man must rustle for what he gets. He must make people know him, he must keep his name and business at the front, he must attract the buying public to himself by every honest means, but never by foul.

A man must carefully foster the trade he gets, but an enterprising man is not contented with simply fostering; he wants and demands a growing business; he must reach out into new fields and add new customers constantly to his list. How to do this is a problem that every business man must face—advertising solves it.

All successful business men will tell you that good, judicious advertising pays a big interest, while ill-timed, poorly-placed, injudicious advertising is a poor investment, dear at any price, worse than throwing one's greenbacks into the fire. A good business can be ruined by poor advertising, while a poor paying business can often be put on a sound, profitable basis by placing the right kind of advertisements at the right time and in the right place.

If you have something of value to sell or trade be sure of this: there is someone somewhere else who wants the very thing you wish to dispose of. Now the problem is: How can you two be brought together as buyer and seller and the exchange which will be mutually helpful be made?

To the modern man of business the problem has been largely solved, as so many others have, by the printing press. He has found the solution in the advertising columns of our standard periodicals. Into every home, shop, office in our land, the weekly or monthly journal makes its way. With our rapid mail and transportation system the farmer or merchant on the Pacific slope can deal directly and quickly with his neighbor in the far East or South.

I have a friend in Portland, Ore., who is a dealer in fancy poultry, and he buys all of his stock direct from fanciers on the Atlantic seaboard. This simply shows that one's field of operation is not limited to the town or state in which he lives, as it once was; but today the field is simply limitless. Distance and time hardly enter into this problem. This is the question: How can I let my brother farmer or fancier in some distant state know that I have the very things he is looking for? Advertising does it. It is the "middleman" between the purchaser and consumer. Whether you are a buyer or a seller, advertising will open the markets of the world to you.

In all advertising, whether you employ the costly page in

the summer. Break them up once and they may lay a few eggs and then want to set again.

My wife and I have kept hens for ten years. She ran the chicken business according to her own notions until about four years ago. She did her part well, but it was not very profitable. So I took charge of the laying flock October 5, 1903. Within a week they began to lay and there has never been a blank since in our daily egg record. For a year and a half I kept on studying feeding and housing, remodeling hen house, building yards, chick shelters, feeders, etc., and then I trespassed again upon my wife's department.

She had been selecting and grading up Barred Rocks. She wanted large hens, well barred, yellow legs and large brown eggs. I went and bought pure bred Barred Rocks, both eggs and fowls, also White Wyandotte eggs. I took a hand in setting the hens, while she kept on with the incubator. We sometimes wonder if we would not have been just as well off if we had kept on as we were with the old stock. We got better layers and larger cockerels and pullets from the pure bred, but I did not understand mating to keep them up.

Last year we added Buff Rocks, and for a year we studied and compared the three breeds. We learned some of the disadvantages of keeping three separate flocks. But we had only one mixed chick out of 523. We finally decided on the White Wyandottes alone for the future, and are raising only white ones this year. We find them better layers, earlier maturing, withstand cold better, not as apt to get

SINGLE COMB WHITE LEGHORNS.

a popular magazine or a two-line ad in your home paper, there are some essentials that should never be lost sight of. They are very important, and without them any amount of money spent in advertising will be more than thrown away, but with them the advertiser can hardly help but succeed. I ask you to apply these three essentials principally to any advertiser that you may chance to know and see if they are not genuine. See if his conformity to these principles does not largely account for his success: 1. There must be an honest policy back of the advertisement. 2. There must be a carefully selected medium. 3. Keeping forever at it.

An honest policy is most essential. The fake advertiser may flourish for a time, but his day is short. Honesty and square dealing must stand back of all your work. It is not necessary or even well to advertise your honesty but constantly prove it to all your customers by your just and honorable dealings with them. A man should have something to advertise that he himself has faith in, something that is worthy an honest man; in short, there must be real merit in what you have to place in the market. As Lincoln said: "You can fool all the people some of the time, and some people all the time, but you can't fool all the people all of the time." Advertisers soon learn this to their good or ill.

Let your advertisement be absolutely truthful. Some otherwise honest people seem to think they have a right to exaggerate and even falsify in an advertisement. This is not good business policy. Do not say a thing is all wool unless you are sure of it. Do not advertise it as white if it is

thousand copies. The question that determines the selection of a medium is this: Will it carry any advertisements to those who are interested in what I have to sell? An advertisement for silk hats would be quite out of place in the American Poultry Journal, because as a class poultrymen are not interested in silk hats. An advertisement for eggs or fancy stock would be quite away from home in the Literary Digest, because those who are interested in the Digest are not apt to be interested in the different breeds of fowls.

The larger the circulation, the better if it reaches the people of your class, and by your class I mean those who are interested in what you are interested in. Under this head I want also to include the form of advertisements. The printer's art is also to be considered. The selection and arrangement of cuts and type make a wonderful difference in the carrying power of an advertisement.

Large advertisers can leave this to their own trained men, but the smaller advertiser must trust to the skill and integrity of the printer and editor; hence the prime necessity of selecting a responsible medium, a paper that you have full confidence in, one that will give you as good a space as you can pay for and will arrange the type in a most attractive manner for you. In short, advertise in a journal that has your interest at heart as well as its own. There are a number of advertising bureaus into whose hands the small advertiser can trust that part of his business with excellent results. They employ trained men, and a responsible bureau will look carefully after your advertising interests.

Some of the breeding houses on Pine Top Poultry Farm, Hartwood, N. Y.

slightly colored. Do not say your product is absolutely the best and only on the market when you are convinced there are others just as good. If you had an appliance to sell and wish to advertise to state its real merits fearlessly, frankly but always truthfully, say only what you can redeem. If you warrant your goods always stand ready to make your pledge good. In this way the people will soon learn to trust you. You will gain their confidence and patronage.

Avoid the bombastic braggadocio style of advertising; it disgusts people, and, above all, never decry your competitors; it is unmanly, unjust and even dishonest to do so. It will hurt you more than them; you will lose more than you will gain by it. When advertising brings you a new customer, so deal with him that he will always be your customer, or at least your friend.

The second consideration I said was the medium. This includes much. Where and how shall I advertise? are important questions. One must study to put his advertisement in the form and place where it will bring the largest returns. I do not believe that these cheap advertising sheets that are thrown from door to door, blown away by the first wind or thrown into the basket or fire by the first passerby, are of any real benefit. They are not responsible mediums. Better select an established, well-known journal with a bona fide subscription list—a journal that the people have confidence in.

The extent of the circulation is, of course, important but not all important. For instance, a journal might have a circulation of a million copies per month and still be a poorer medium for your advertisement than a journal of ten

The last consideration, keeping forever at it, is essential to success in anything. One does not expect to grow an oak tree from an acorn in a single day. It is just as unreasonable to expect an overpowering business from a single small advertisement. Keep your hens scratching and they will lay, says the practical poultryman. Keep your advertisement at work and it will bring you the golden egg. There are times when a simple single ad in one issue is enough. It is inserted for a definite purpose, and when that purpose is accomplished that is enough; but the man who is in business to stay and who wants a daily increase must be a perpetual advertiser. Fifty-two insertions of your attractive advertisement in one paper will cost you less and yield larger returns at the end of the year than fifty-two single insertions in as many different journals.

It is best to select a standard medium; take your space by the year or term of years. Popular advertising is better than that of the spasmodic type. The readers will soon become familiar with your name and address and line of business. They will soon learn what you have to sell and will understand its merits, and when they want anything in your line they instinctively turn to you as an old friend. In what I have said I have given only general principles underlying all advertising. Of course, it is understood that there are almost as many mediums as there are minds and methods that one can use successfully will bring failure to another. There is the poster, the sign, the catalogue, the blackboard at the gate, and innumerable other methods involving many novel ideas, and many of these can be used to advantage, but just here is where the advertiser must use his greatest

discretion. It can be as easily overdone. In writing the above I have had especially in mind the poultry man as an advertiser. He cannot advertise as the merchant in the city or village can. Conditions are different. I believe the best method for him is to take what space his business will allow in a standard, well-established journal, and use it judiciously. Let unswerving honesty be back of all you do and say and keep forever at it.

You never will regret the money spent in such advertising. Try it and see if it is not so. Before closing I want to add a word of digression. It is to the reader and patron of advertisements. If through experience you ever have reason to believe that a certain advertiser is a faker or swindler give him ample time and opportunity to correct the wrong he has done you. It may be only a mistake; but if he fails to rectify it report him to the journal in which he is advertised. You and the editor can then make short work of his dishonest career, so far as that journal is concerned. And, again, whenever you write to a business man, having been attracted to him by his advertisement, never fail to tell him you saw his advertisement in a certain journal. It will help him and the journal and you. It will help him by showing him where his advertisements are paying investments. It helps the journal to a continued patronage of the advertiser. It helps you, for without these advertisements you would pay many fold more for this journal, which you have just read with such relish and profit. Thus the reader, advertiser and journal can be of mutual help, and it is good to help others.

COLD FACTS ABOUT THE POULTRY BUSINESS.

Failures in the Poultry Business and Why they Happen—Carelessness and Inattention to the Details—Lack of Foresight and Preparation—False Economy and Desire for Gain—Failure to Take Due Precautions—Wrong Theories and Biased Advice—The Sin of Holding out False Hopes.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Me.

Many of the so-called mistakes in the poultry business do not "happen"—they are the direct results of causes that can be traced back to the person or persons who in the first instance engaged in the business.

A great amount of time, money and opportunity is yearly lost in making mistakes and afterwards trying to rectify them, which means more loss of time, and still more expenditure of money and energy, which all might have been saved if in the beginning measures had been taken to prevent them, and though it is well to correct our mistakes when we find them out it is far better to prevent them and therefore let us trace some of the usual causes responsible for the many mistakes made in the business of poultry raising.

Carelessness and Inattention to Detail.

There is no business that we know of in which the neglect of the little things works out such disastrous results as in the poultry business, and simply because the whole business is built up of little duties and attentions to the daily need of the stock and carelessness and inattention to the details of these combined needs finally works out complete failure and loss.

The few chicks and heads of poultry that have the entire range of the place will manage to look out for themselves somehow and find the needed requirements for growth and maintenance, but where the number of chickens goes into the hundreds and the range limited it needs our constant care and attention to grow these chicks into a successful maturity.

Regularity in the feeding, and the feeding of the proper rations consisting of all the necessary elements for health and growth is so much of an essential that a loss of a few days in the progress in growth of the young stock, may later on, mean the loss pound for pound of every cent of profit that otherwise might have accrued.

Absolutely nothing should be trusted to luck, and the usual "guess that will do well enough," but proper care should be given constantly and grit, water, scraps, green food, dust-baths, and other essentials for the comfort of the young stock should at no time be lacking.

What is the use of raising a fine flock of chickens and then because it is a little trouble to do the right thing, leave them at the mercy of invading rodents and other vermin? Go through every house at night, see that every bird is all right and comfortable; close doors and all windows in front of which wire screen has not been put, but

these are essentials for success and necessities in every poultry yard and ought to be in front of both doors and windows.

Don't trust to the wire fence surrounding the yards that this will keep out intruders, for it will not do so. We have known a skunk to dig under a foot-board that was sunk into the ground and then locate under a poultry house and nightly cause destruction and loss before he was discovered to be an inmate of the poultry yard. Trust nothing to luck, but give careful attention to every detail except you want to invite failure.

Another fruitful cause of failure is the carelessness of not keeping an account of expenditures and income and though this sounds almost incredible there are a number of breeders of our acquaintance and breeders of note at that, that could not tell you how much they paid out for the grain used at their plant last year if I should ask them; it keeps things from going too far down hill if accounts are kept and puts the business on a basis of sound knowledge, rather than on the guess-so plan of procedure.

Another carelessness is in the neglect of keeping a stock book. No success can be secured in the breeding of fine poultry without it, and there would be less borrowing of birds for exhibition if a little more care and attention to the details of breeding birds for exhibition was followed. No man can work in the dark regarding the propensities of his stock and expect to succeed. The man who depends on matings made up on the "hope-so" plan will become a dead failure in the production of fine stock, and it is in this particular where so many men find their Waterloo, and where the careful exacting breeder who knows the records of his birds, pedigrees that goes back to the very start of his operations, who comes home the conqueror, and his assurance of being able to produce birds of high quality is grounded on the foundation of a well studied knowledge of the science of breeding.

Lack of Foresight and Preparation.

The above caption is particularly applicable to the profit side of the business which is more often than not lost because of the lack of a little forethought and preparation.

How many mistakes that are made yearly in the lack of preparation we shall never know, but we do know enough of the more prominent to show what we mean.

No man should make the mistake of raising more stock than he can properly house and care for, and yet this mistake is a common cause of failure.

It is easy to take care of five or six hundred little chicks when a few small buildings will accommodate them during the warm summer month, but as they grow into maturity the quarters become too small, filth begins to accumulate too fast altogether, and then follow several days of rain and bad weather with insufficient quarters for the birds and then loss upon loss, with consequent discouragement and all because no proper plans were made in the start, to take care of the chicks when they got to the state of growth when ten times as much room would be required for their comfort than it took in the first few weeks of their existence.

In this case it is well enough to count your chicks before they are hatched and figure out beforehand how much room it will take to properly accommodate the number required, and if a man cannot afford to build enough good shelter to accommodate the chicks, keep on cutting down the number till the ones expected can be properly housed in what you have on hand or can afford to construct.

Another case of lack of forethought is to be ignorant of the current prices for market poultry.

It invites failure to send stock to market when the prices are lowest, when the same amount of stock could under proper management and care have been sent when the market price for that kind of stock was the highest, and sometimes a very few days will make a considerable difference in the profits.

In the building of a new house the same lack of forethought is made visible in the number of poorly constructed and poorly situated buildings we so often see, and many times the failure was simply due to the tendency of the builder to build the house for himself, rather than for the poultry it was to accommodate.

Take time, study, plan, investigate, and find out what sort of a house would give the best results, count the cost before you build, cost of money, cost of expenditure of labor, and by the last phrase we mean that the house should be so constructed that it can be run in the easiest possible way and save time and labor for the attendant.

Take due precaution as to its location, for a house may be well placed in the summer and be placed dead wrong for the winter months and so prepare for the cold and the

snow, and shelter from the winds, and let the eyes of the house face the winter sun as much as possible, for it is when the orb of day hangs low that its life-giving beams are most needed. Shade is good during the hot summer months, but in the bleak long winter we want the sun and as much of it as we can get.

And while we are on this matter of housebuilding for poultry let me give one other warning: never use an old piece of board in a new house, however good it may look, if it has been used in the construction of an old coop or an old poultry building.

We have known a fine building infested with vermin a month after it was built by this lack of forethought, because the piece or two of old lumber used was infested with mites and at the proper time they hatched out every nit, and no dead ones in the shell, and this leads us to our next mistake.

False Economy and Desire for Gain.

There was nothing saved in the use of the few boards as above mentioned as it was a miserable blunder that caused our friend so much vexation and so much trouble that he finally had to desert the house and for a whole season it stood empty and useless.

It is false economy to try to economize in the quantity and quality of food used to rear our poultry, as it is not a matter of how long it will take to feed out a bag or a ton of food, but how quickly we can make them eat and digest it, for the quicker the right kind of food gets into their digestive apparatus the quicker it will come out on their body, and the quicker it comes out in good, healthy, steady growth the quicker it will be exchanged for cash.

Any economy based on the gain of a few cents in the buying of damaged grain is simply so much loss, and there is a good dimension doubt in my mind whether damaged poultry food is worth the buying at any price be it ever so low.

The real economy in the feeding of poultry so as to obtain the best results in the shortest possible time, for market poultry and for the production of eggs, is to buy the best grade of everything, and then to blend it in the right proportions so as to get out of it all the food value it contains.

It is economy to save food in the way of not wasting it, but it is poor economy to see how far a lot of grain can be made to go by feeding it out in scanty rations and only invites failure.

There is a great deal said about overfeeding but it is my private opinion that there is a lot more underfeeding done than overfeeding.

Young stock in particular cannot very easily be overfed. They will eat all they can get and they ought to have it, but at regular times, and some food ought to be given in hoppers that they can help themselves whenever they need it.

It is the greatest possible mistake to stint the poultry as far as floor space of the buildings is concerned. Overcrowded houses are always a source of sickness and ill health, and this in turn means that egg production will suffer to such an extent that profits from the fowls will be out of the question.

From twenty-five to fifty fowls in a house is enough for good profitable laying and from five to ten square feet of floor space about right for each hen, though the smaller the number of occupants the larger the floor space needed for each hen.

Failure to Take Due Precautions.

In all kinds of business enterprises this is an item of much importance and in any well managed establishment it is never neglected and the same should hold true in the poultry business as well.

There are so many contingencies that cannot be put down to take place at any given time that all we can do is to be prepared for them when they come.

Some morning, for instance, it looks like it might be a stormy day and precautions must be taken so as to be ready to safeguard the chicks from being taken in it unaware.

If the chicks are let out at all under these conditions, some one should be at hand on the first sign of rain to get them back into their brooders and houses for it is sudden death if a flock of little chicks are left out in a rain storm to be drenched to the skin. They will crowd into some corner with heads up in the air and stand there till drowning finishes the work.

More chickens are lost annually throughout the country by the neglect of taking due precautions against emergencies of all kinds than from any other source.

Make provisions for shade, and if there are no shade trees in your runs, when the day makes promise of being

hot and sultry take the precaution to put up shades in all the chicken runs, better do too much than not enough.

If the business is run on a small scale and hens are used instead of incubators, always have a few extra broody hens on hand; much loss in time and chicks may be saved by this precaution.

Another mistake often made is to wait till the vermin are there before cleaning out the houses; an ounce of prevention is better than several pounds of cure.

Never take anything for granted in this matter, always take the precaution to oil the roosts, whitewash the walls and sprinkle floors with some sanitary preparation. There is absolutely no need to have houses filthy either from dirt or vermin; cleanliness is necessary to success and filth of all kinds invites failure.

Wrong Theories and Biased Advice.

And if there is a greater stone of stumbling in the poultry business I do not know where and there is not one of us, that if on the square, will not plead guilty to the above statement.

For how many, even today, with all our knowledge, accepts appearances as facts and without any investigation whatsoever, and whatever wrong statements may be propounded by brainless investigators who probably have axes to grind of their own, or are failures themselves in profitable poultry management, though perhaps of interest, they are no good to establish a profitable poultry business on.

I can give no better advice regarding this matter than what I myself have learned by years of experience, namely, to accept nothing that you read about or are advised to do till you have proven for yourself whether it is fact or fiction.

What will answer in one place will not answer in some other place, and what will make one breed of poultry thrive and do well on will not answer for another breed.

One make of incubator will answer all purposes for which it was made with one person, but some other person cannot get the same results from it. Local conditions may be responsible; the kind of stock may have a good deal to do with it. One person in a good many hundred is not fit to run any make of incubator, would make a failure of all of them. To such a one I will say, stick to the old hen.

One person favors the mash fed in the morning and expatiates on the good results obtained; another feeds it in the evening and gets as good results, and still another feeds none at all and does as well, while another who follows the advice of one and all of these methods gets no results at all.

The fact remains that what has proven to you to give you good results in the locality in which you live is the method for you to follow and never change it till you are absolutely convinced that the change will minister to still better results.

For what we are all after, is not theories but results, and until my theories or yours have proven themselves practicable by actual trial don't try to work them out in poultry for profit; it is failure. These are the chief causes of errors in the poultry business of today though of course many more might be mentioned, and if I did, it would be

The Sin of Holding Out False Hopes.

Many a man has lost his all and sold out the odds and ends of what was left of his venture into the poultry business a wiser though not by any means a man friendly toward the business in which he failed, and if we are to place the responsibility it would be on the men who by false statements held out hopes that never could have been realized.

The poultry business needs men fit for the business, and it is not any and all that can succeed in it, there must be a love for the work and if that is not there, the chief element of success is lacking.

Have just received a letter from friend Zimmer, in which he says, "I am kept pretty busy, 80 young puppies in their nests and just learning to drink, takes time and patience. Two hundred bantam chicks out and more coming, but to a fancier and lover of animal and bird life it is very interesting and as much pleasure as toil."

No wonder he has made himself famous as a breeder of fancy stock as this is the spirit that succeeds. "Zim or Debonair" is not only master-of-hounds, but the master of his art, and we all know it.

No use to hold out false hopes of success where this spirit is lacking. I may be mistaken, but I think I am safe in saying that every paying poultry business of today is the outcome of an inbred love for fancy stock, and the profit of secondary importance when the first small foundation of a later paying business was laid.

Don't be overconfident for because some men succeed in what they are doing you may fail in, except you as they, are fitted for the business.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Horace Pratt, Lawrence, Mass., and the second prize to C. W. Sixt, West Park, Ohio.

CARE DURING THE MOULT.

This is the time of year that the fowls begin to moult and this is the best time to pick out the birds you wish to dispose of and those you wish to keep for winter layers or next year's breeders. Either put them in separate pens or leg-band them. Do it now, for as soon as they begin to drop their feathers their combs will shrivel up and you will not be able to tell your best birds unless you have them marked. The fowls that you intend to retain for winter layers should have a separate pen and be fed to force the moult. A good way to force the moult is to reduce the feeding for a short time, say two weeks, the first part of August. This stops their laying and reduces them in flesh. The old feathers ripen and fall out. At the end of two weeks begin to increase the food gradually until you are feeding a full ration. Feed for feather production. A good ration is wheat, oats and cracked corn in the morning and a mash at night. A good mash for moulting fowls is made as follows: Wheat bran, ground oats and corn equal parts. One-tenth of the mash should be beef scraps and for each twelve fowls add about two tablespoonfuls of oilmeal. Also feed a pint of sunflower seeds for each twelve fowls three times a week at noon. Feed all the green food they will eat, such as lettuce, mangels, cabbage, etc. Not forgetting the crushed oyster shells and grit. It is also well to give the birds a tonic at this time of the year and a very good tonic is the Douglas Mixture, made as follows: One-half ounce sulphuric acid, eight ounces copperas. Dissolve the copperas in one gallon of water. As soon as the copperas is dissolved add the acid. The mixture should be given in the drinking water every other day, a quarter of a pint of the mixture in one gallon of water. This is a very good way to force the moult and to bring the fowls back to laying by November. Now as to the birds you intend to use for next year's breeders it will do them no harm to start the moult on them in August, but do not force them for winter egg production, but feed them just enough to keep them in good condition. Do not feed these birds as much animal food as you do your winter layers. Give them plenty of exercise. If you force these birds for winter eggs you will not get as good results in hatching in the spring, neither will you get the number of eggs when you want them for hatching.

If after sorting out your next winter layers and your breeders you have another grade of stock that you do not care to winter put them in a separate pen and instead of forcing the moult continue to feed them for eggs as long as you can spare the pens, then fatten them for market. In this way you will have eggs the whole year, as these birds will be laying eggs just when your other birds are moulting.

C. W. Sixt.

West Park, Ohio.

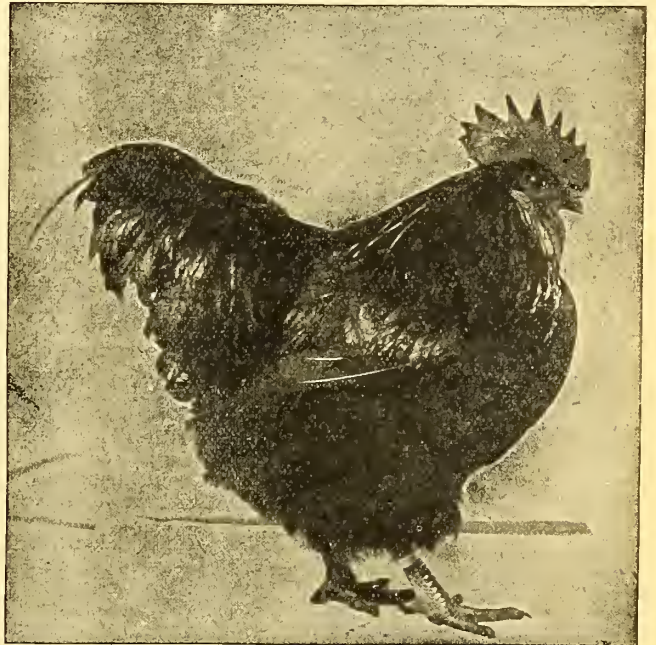

PAST THE DANGER LINE.

After you have had all the trouble for three weeks with setting hens or running an incubator you are rewarded with a good hatch and you feel satisfied with results you keep close watch on them, think of them in the morning and the last at night; you keep fresh water before them all the time and feed them very carefully on some choice grains, etc., until they are about six weeks old, then you will say my chicks will live now because they are out of danger and that I can rest easy for the rest of the summer, all that will be necessary is to throw them some corn night and morning. This idea is a sure cause for the failures that you often read about when you lose your ambition to keep them growing

and healthful. You are throwing money and time away, as at this time it is as important to profitable poultry raising as any other time and more to me as I believe that to produce winter eggs you must have well matured kinds that have had constant care and proper feeding, for without them a bird cannot be constitutionally fit for egg production. You may hatch chicks from the best layers in the world and if you neglect them at any time from the egg until they are matured it will impair their laying qualities or if they are let stand still in growth they have lost what cannot be replaced later on in life. My method is to hatch from nothing but well matured, healthful stock, 2-year-old stock preferred. After hatching they are placed in coops three feet square with floor one inch from bottom, ample light and ventilation and a grass run. They are fed on H. O. poultry food until four weeks old; then they are allowed free range with the mother hen and are fed on mash in morning composed of one part H. O., one part corn meal, one part bran, one part beef scrap. They are fed this mash at 6 a. m. and 10 a. m., and at 2 p. m. and 6 p. m. they are fed all they will eat up clean of the following: One part best wheat, one part cracked corn, one part hulled oats. Every Monday and Wednesday they are given one feed of green bone, ground very fine in the place of the 10 a. m. feed. Upon these feeds they are fed until they are placed in their winter laying coops.

When the cockerels begin to crow I separate them from the pullets and begin to fatten them for market, as they bother the pullets too much when left together.

Of course they have been kept free from lice and mites

"Nabob," the wonderful S. C. Black Orpington cockerel, scoring 96½ by the late T. E. Orr, winner of first at big A. P. A. Show, Auburn, N. Y., January, 1907. Bred and owned by Joe Coleman, Bellville, O.

by frequent dusting with Lambert's lice powder and the roosting coops sprayed once a week with kerosene and air slacked lime thrown on the floor which keeps them sweet and clean.

They also have clean, cool drinking water before them at all times, as I have a faucet outside the house which I leave dripping into a dish, it also being shaded by an apple tree.

After years of experience I have found that the very best feed is the cheapest as you get the very best results. From cheap feeds you get your trouble, such as disease or bowel trouble, etc., which will ruin any flock. Good care and best feed is sure to succeed, but good care and cheap feeds will give impaired results. I always say the best is none too good for me and my chickens, as I look for the very best results. I find that those who make a success in the poultry world are those that are at all times interested in the welfare of their poultry, always trying to obtain better conditions which means results. With this feeling in your mind poultry keeping is a profitable pleasure for which you are well paid.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Federation of Specialty Clubs.

The time is not far distant when the specialty clubs of America will be organized and, acting as a whole, will exert a wonderful and beneficial influence not only upon the Standard-bred poultry business, but upon the legislative action and attitude of the American Poultry Association. To the careful observer of the signs of the times this fact looms up large and full of good light.

The gentlemen to whom was assigned the task of preparing a constitution and by-laws for the American Poultry Association realized that soon the federation of specialty clubs was to occupy a very prominent and important place in America, and the new constitution and by-laws were so drawn as to aid, encourage and protect in a measure such a federation when in occupancy of its legitimate position.

That a federation of specialty clubs wisely organized and conducted would be of incalculable benefit to the Stan-

dard-bred poultry industry goes without saying. The individual specialty club today confers great benefit upon its members. A federation of specialty clubs would, in the very nature of things, increase the benefits derived by members of the individual clubs. Such a federation would be a power for good second only to the American Poultry Association. Its influence upon all movements for the betterment of Standard-bred poultry would be tremendous. In the one case of show management as affecting classification, judging and prizes it could bring about a greatly-needed reform.

To secure the greatest good to the greatest number the federation should, in our judgment, work with the American Poultry Association and be auxiliary thereto. In no other way, we believe, can it accomplish the desired results.

We hope to see a preliminary meeting at Niagara Falls of representatives of such clubs as the White Wyandotte Club, the White and Barred Rock Clubs, the Rhode Island Red Club of America and leaders in the American Poultry Association advance movement. Such a meeting cannot help but be productive of much good. The American Poultry Association is anxious to give all proper aid to this new and very desirable movement.

The Making of Columbian Wyandottes.

In the June issue of American Poultry Journal we told how a New England breeder claimed to have produced excellent Columbian Wyandottes by employing the Silver Wyandotte-Rose Comb Rhode Island Red combination. In this connection Mr. Fred W. Proctor says:

"In editorial pages of your esteemed June issue you refer to a certain New England breeder of Rose Comb Rhode Island Reds who produced Columbian Wyandottes by breeding that breed with Silver Wyandottes. It is not generally known that the Light Brahma is a quickening modification of a color type similar to Rhode Island Reds, and that the Brahma occasionally sports back to that coloration, these having been shown some time since as Buff Brahmas. This being the case, the only logical way to produce a Columbian Wyandotta would be to get a Wyandotte-bodied fowl, red with black points, like the Rhode Island Red, to sport out its red, as in this case by breeding to a color type which produced no red. I have listened to many theorists that White Wyandottes and Light Brahmas would cross up to make a Columbian Wyandotte, and I know of one poultryman who made this cross some three years since and got a flock of 100 or more chicks, every one a poor imitation of Buff Wyandotte. If one stops to trace the natural evolution of our several color types, the conclusion is inevitable that the antecedent type to the Light Brahma color was a largely red, modified black-red which had lost its red color. Buff Wyandotte and Barred Rock is another proved source of Columbian Wyandotte color, in this case the Rock supplying the black tendencies for neck, wing and tail."

We believe the position taken by Mr. Proctor is correct. We have held, and been severely criticized for so holding, that the Light Brahma-White Wyandotte cross has not produced the best

Columbian Wyandottes of today; that it will not produce the Columbian Wyandottes of the future. We want every person interested in Columbian Wyandottes to give Mr. Proctor's letter careful consideration.

Judges at Jamestown Exposition.

We are in receipt of a letter from John W. Murkin, Superintendent of Poultry, Jamestown Exposition, announcing the appointment of the following judges: Thomas F. Rigg, Iowa; F. J. Marshall, Georgia; J. H. Drevendstedt, New Jersey; A. F. Kummer, Pennsylvania; W. S. Russell, Iowa; George M. Knebel, Texas; Charles T. Cornman, Pennsylvania; T. Reid Parrish, Tennessee; Frank Shaw, Illinois; T. M. Campbell, Indiana; R. E. Jones, Kentucky; W. J. Stanton, New York; W. C. Denny, New York. The show will be held in the Convention Hall, which is the first building inside the main entrance, October 22 to November 1. The heaviest attendance at the exposition will be during the months of October and November and every indication points to a great poultry exhibition. The premium list will be issued August 10. Entries close October 1, 1907. We trust that the fraternity will give Superintendent Murkin its substantial support.

Colored Cover For August.

On our cover page in August issue we will present to our readers a very artistic drawing of a pair of Silver Spangled Hamburgs in natural colors. It is only a few years ago that this very handsome fowl was one of the most popular varieties bred. The Silver Spangled Hamburg is not only a handsome bird, but a very profitable fowl, as they are great layers of a large white egg, and although smaller than a great many of the more popular varieties of today, they are certainly a delicious table fowl.

On the cover of this issue appears a pair of White Crested Black Polish, a variety that is now being bred almost exclusively by those who have a taste for the beautiful in fowls, although it must not be overlooked that the Polish are prolific layers and a good table fowl, but the newer and larger varieties have displaced them in public favor.

Reese V. Hicks Will Edit Poultry Culture.

Poultry Culture Publishing Company, Topeka, Kan., announces that it has secured Mr. Reese V. Hicks, editor of the Industrious Hen, Knoxville, as editor and business manager of Poultry Culture.

He will assume his new duties at Topeka about Oct. 1.

Mr. Hicks is a member-elect of the executive committee of the American Poultry Association. He is well known, particularly in the South, as a breeder, editor and lecturer on poultry subjects.

Poultry Culture Publishing Company has been incorporated and the following officers have been elected: President, E. W. Rankin; vice president, Arthur Capper; secretary, R. V. Hicks; treasurer, M. M. Capper.

The Season's Results.

It is now known that the season's crop of Standard-bred poultry is far short. Throughout the greater portion of the country the spring was very backward and extremely unfavorable. This means that only the most skilled and careful breeders will have anywhere near the usual number of birds to sell, and that the demand for breeding and exhibition stock, especially the latter, will be very heavy. Prices will, naturally, rule high, and the fortunate ones who have succeeded in rearing a goodly number of good birds will find a ready sale for their stock—if they will let the buying public know they have the stock.

We supposed that the Board of Review would have something to say as to who is elected first vice-president. Also the members of the association in convention assembled. It looks as though we were mistaken, however.

A writer in Poultry Herald brushes aside as worthless all the breeds and varieties of fowls recognized by the Standard of Perfection. Here are some of his statements: Plymouth Rocks and Wyandottes worthless as market fowls; Leghorns too small, but better market fowls than Rocks; Pet Game best fowl for farmers and for the market. Sure thing that this fellow has made a total failure in the poultry business.

English poultry journals report that the amount of market poultry imported into England from the United States is annually growing less. Yet millions of pounds of market poultry is annually imported by the English. The reason why the American trade is falling off is that the shippers here do not put the fowls in as good shape as the English market demands. It would seem as though the American exporters would not let this valuable trade get away from them when it could easily be retained. The truth is that in the marketing of dressed poultry Americans are very careless or very ignorant. It is almost impossible to find properly-dressed poultry in any of our city markets.

The more we study the Hewes amendment the more anxious we are to learn the identity of Theo's candidate for secretary-treasurer—next time.

Another editorial in Farm Poultry like that one in the last issue regarding American Poultry Association affairs and we will all be loving John H. Robinson.

In the "laying contests" in America breeders have tried to be fair and reasonable in the records reported. We have never claimed more than one egg each and every day from each hen in the contest. Down in Australia, where they are contest daffy, they are not quite so conservative and careful. For instance, one of the contestants writes to the Australian Hen that his White Leghorn pullet laid as follows: April 1, one egg; April 2, two eggs; April 3, one egg; April 4, two eggs; April 5, three eggs; April 6, two eggs.

The indications are that the meeting of the American Poultry Association at

Niagara Falls August 13-15 will be largely attended. Every member should be there. It will be worth while.

And through it all, regardless of the wrong inflicted, he has been the same gentlemanly, upright and level-headed Donavon.

A pointer: If you are breeding Silver-Laced Wyandottes do not go out of them. If you are looking for a variety that will have a boom in the near future get some of the Silver-Laced Wyandottes.

By a reading of the advertising column of the Australian journals one is led to believe that all the New York, Boston and Chicago winning males are now pen-heads down there.

Poultry Topics, which may or may not speak with authority, says that W. S. Russell will again be a candidate for secretary-treasurer of the American Poultry Association.

We understand that Brother McReynolds will be at the Niagara Falls meeting. Here is an attraction which President Curtis overlooked when making up the program and naming the features of the meeting.

The Black Leghorn boom in England shows no signs of abating. This variety is bound to become popular in this country, too.

It may be the "natural thing" that poultry from Canada outsells the product from the United States in English and French markets, but we fail to see it that way.

More than four years ago, at a banquet held in Chicago, the question "Shall the American Poultry Association License Judges?" was discussed. A number of prominent poultrymen and judges spoke, and of the number but one held that the association should name the poultry judges of America. The one so holding was Fred L. Kimmey. And now it has come to pass, as Prophet Kimmey said it would.

Brother Purvis, of Poultry, says that he greatly enjoyed his few weeks' stay out on the Pacific coast. Why should he not? Listen to this: "Going by invitation into the poultry yard of a beautiful young lady, I saw the rich glow of health on her cheerful face, and watched with gladness the rippling smiles that chased each other like little Cupids over her lovely features."

If the Northwestern Branch is not one of importance it will not be the fault of Brothers Nourse and Holden, of Poultry Herald.

It is hoped that the amendment to the constitution proposed by Election Commissioner Kimmey will be adopted by the American Poultry Association. If future elections are to be conducted as was the last one no self-respecting member will be a candidate for office.

We have asked President Curtis to appoint Dave Nichols, J. H. Drevenstedt and M. S. Gardner as a body-guard for Theo Hewes during the week of the American Poultry Association. We do not want to see Theo bunked and thrown over the falls by

**EASY
TO
USE
QUICK
ACTION**

That's what you want when you have vermin and lice in your poultry pens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultry pens, on stock, or bugs from vines.

Lewiston, Me. Apr. 19, 05.
Mr. D. J. Lambert, Apponaug, R. I.
Dear Sir:

There are plenty of other kinds "just as good?" but I want the "old Reliable"

(Signed) JOHN S. HYDE.

some of those wicked men whom he says will beset us all at every turn.

To the amateur fancier: Do not discard the hens. Do not let the brilliantly-colored and coquetting pullets turn your head. Bear in mind that it is hens of tried and known quality that make the best breeders.

The Schureman-McReynolds fight has gotten to the open-letter stage. Now watch out for a killing volley from the South.

Just as we are going to press we receive a letter from Mr. Ross C. H. Halllock, St. Louis, Mo., informing us that there will be given the extremely low rate of \$10 for the round trip from St. Louis to Niagara Falls, for those who desire to attend the annual meeting of the American Poultry Association, August 13-15.

Facts and Fancies.

Written for A. P. J. by D. Lincoln Orr.

I do not know as many of the American readers need any advice from me about running their poultry business, but just a word or two. Look out for lice.

Years and years ago, some time after the flood, my young chickens were dying at an alarming rate. Talk about rapid fire, why, bless you, it was quicker than that. I was completely lost as to what to do. Well, I wrote M. K. Boyer. You have all heard of that noted poultry writer. I explained as near as I could the trouble. He wrote me back a very nice letter telling me he thought the trouble was lice.

I was pretty thoroughly convinced that lice was not the trouble and I wrote him (I am sorry to say) a sharp letter; in other words, he did not know his business. He came back at me very politely, still maintaining that lice was

the cause of my trouble. Thinks I to myself (apologies to Drev.), maybe Mike is right. So I looked very closely this time and lo and behold, on the back of the head and neck, well! Yes, they were there, great big lusty fellows, just sucking the life blood out of those future winners. Keep a sharp lookout for head lice.

In conversation with Mr. John S. Holloran, Cornwall, N. Y., one of the best druggists on the banks of the Hudson, he informs me that he has a positive cure for white diarrhoea. He has proven to his own satisfaction that he can and has cured the trouble in his own flock. Mr. Holloran has some fine Buff Orpingtons and Barred Rocks.

There has been a great deal said about shape. Everybody is yelling shape. I never felt so small and insignificant as I did last Sunday afternoon. I'll tell you the reason.

In front of the house is a large lawn. Saturday afternoon it was out very close and early Sunday morning we had a very steady, gentle rain for two or three hours, then the sun came out and it was most beautiful. The shower brought out the worms and the worms brought the robins. More than a score of beautiful robins were skipping hither and yon, some pulling at a worm, others carrying worms to their young. In looking them over, and I had a good chance, after I went up stairs and brought out a good field glass. Talk about shape! Well, it was there, and no mistake. No standard of man to go by; but the laws of God and nature need no human aid to breed to either color or shape. You all have seen them. Their shape is identical and clear cut. There is no mistaking a robin, either in color or shape, or any other bird that has not been faked by man.

I don't want any one to think I am getting sentimental or romantic, but I reckon that bunch of robins hopping around was built by the Almighty, and every one a winner. I, of course, could

not handle them, but I'll gamble their eyes were the same color, also their legs, but for size and shape not an iota of difference.

We close our eyes and our memory takes us back to the great Madison Square Garden show, and there before our vision is the great array of—well, say White Wyandottes. Take the cocks and hens as we presume they must be, fully developed, and what do we see? It's too sad to relate; we all know.

I don't suppose many will be interested about the robins, but it struck me so forcibly I simply had to tell it to a few confidential friends. It's all true.

Many of you no doubt have heard of the late John Glasgow, one of the rarest fanciers we ever had, and a plain writer and talker. In a very strong controversy between Theo. Sternberg (now Major) and I. K. Felch, regarding score card and the latter's Decimal Score Card Association, Mr. Glasgow way back in 1894 among other things said:

"To those who are enamored with the system of score card judging of any kind, if the fancy are to have forced upon them two systems having different values, although I don't lay claim to having any pretense to the gift of prophecy, I venture to predict it will sound the death knell of score card judging, and that at no great distant date comparison judging will become universal, north, east, west and south."

Mr. Glasgow's prediction has about come true. Very few, if any, score-card shows are held in the East, and I trust comparison is steadily gaining west and south. While I lay no claim to the gift of prophecy I would not be at all surprised to see our next standard with comparison judging only.

Why should small shows insist on the score card when New York, Boston, Chicago and all our world's-fair shows are held and judged by comparison. The score-card has been handed down, it has served its usefulness in the show room; let us put it away carefully for the good it has done and forget it.

CRUSADER III. Universal Champion of 1907. 1st and special championship, N. Y., 1907. Bred by William Ellery Bright.

7 out of the best 10 prizes at N. Y., 1907, on males, was won by Grove Hill strain birds, including BOTH firsts. Sweepstakes for best three cockerels.

4 firsts on cockerels out of 5 at Madison Square, N. Y., during the last six years have been won by Grove Hill.

15th ANNUAL SALE OF Bright's BARRED P. ROCKS BROWN LEGHORNS

BIGGEST BARGAIN IN BREEDERS EVER OFFERED

by these yards at any rate, and we think we sell cheaper, quality for quality, than any other breeder of these varieties. We know that we have some BIG bargains in prize winning males and males that can breed prize winners. We have sold birds cheap before, but we have never sold such birds for the money as we shall this year.

WRITE FOR WHAT YOU WANT — WE HAVE IT

GROVE HILL POULTRY YARDS, Box 410, Waltham, Mass.
WILLIAM ELLERY BRIGHT, Prop. - A. C. SMITH, Superintendent

Another thing we ought to strike out of the Standard, that is, disqualifications except for deformity only. There is no use hashing over a whole lot of stuff that we all know well. There are many reasons why we should quit that unfair treatment of a bird. Many a fine specimen has been thrown out owing to some little thing that would not trouble a breeder. In fact many a disqualified bird has been sold for as much or more money than the blue ribbon winner.

A bird can win at New York, sell for \$200 and be thrown out at Boston. Why? Just for a small stub or unmistakable sign of their having been there, only seven days in between. Oh! we are peaches at Standard building. I would rather have a big black feather on my White Wyandotte than pearl eyes, and the latter are cut from $\frac{1}{2}$ to $1\frac{1}{2}$. Rich, isn't it?

Well, there is no use of my worrying myself sick over it, but someone ought to howl and nowl about it till reformation sets in.

Another thing that is worrying a great many, and me, too. Borrowing and lending birds. I think it is the worst thing any fancier can do. I heard a partial story about a Rhode Island Red bird that went the rounds the past winter. It was something awful. I have written for a full history, but did not get it. I have been guilty of both borrowing and lending in the years that have passed and I am sorry to own up but it was a long time ago, when everybody almost did it. But it was as wrong then as it is now.

No breeder and no real fancier of today should show a borrowed bird and then sell stock and eggs based on that bird's winnings as an asset. It is just as wrong and a darned sight meaner than

the meanest of all mean pickpockets. It's worse than highway robbery, because the other fellow who is being robbed of his watch always has a chance and besides he can get an Ingersoll for \$1, but the first prize at Madison Square Garden for 1906 can never be won again.

If you win a prize on a borrowed bird and sell eggs supposedly from that bird and you don't have that bird to sell eggs from the Old Boy's company is too good for you. If you cannot buy or breed your winners, then for heaven's sake get out of the game.

I would suggest to Mr. Robiusou, of Farm Poultry, if he would follow the practice and not the advice given him he would perhaps at least for the time being forget A. P. A. matters. High or none. But some editors are trying balls instead of baseballs.

You are right, Drev, about publishing winners, and all the winners, either all to follow out the late old man Vanderbilt's advice, "The public be damned." There was a time when that policy could be worked, but things have changed and the subscriber is the public. An editor does not base his advertising rates on the advertiser, but rather on the number of his subscribers, and the down to date subscriber wants the news and ought to have it.

President Curtis gives in the program for the annual meeting "officers elected." As I understand the constitution no one is really elected until the board of review and the members assembled have had their say. The members themselves are the highest court and until they have spoken no one is really elected.

There is no question but President

Curtis has given a wonderful lot of time and study and deserves a whole lot of praise. He is a hard worker, enthusiastic and a natural leader and is not happy out of the saddle, and he is making a record for this first meeting that his successors will have to get a hump on to even approach. If there is any "live" to the association under the new constitution President Curtis can make it live more lively.

I hear that Mr. McNeil wants to resign in favor of Mr. Donovan, but "won't be let." I don't see how he can resign until he has been declared legally and regularly elected. But, William, you can intimate strongly or mildly that you won't accept, if you wish.

There are two men, Mr. Crawford and Mr. McNeil, for both of whom I have the highest regard as men, friends and fauciers, but were I to be at Niagara I would vote against both qualifying, as judging from what I can read neither is legally nor regularly elected. I hope the board of review will look into this matter carefully.

It was really too bad for Purvis to let down the bars for Robinson. Really I am or will be ashamed to meet the latter. He will have that broad back bay griu on and a twinkle in his eye as much as to say, "Purvis says I am about right, and he is to be the next vice-president." Really, Purvis, it's too bad, and you should not have done it. "An open confession is good for the soul." Sometimes, most always, but not this time.

Mr. Bryant, who I suppose will be declared duly, legally and regularly elected president by the board of review and sanctioned by the higher court (the members) seems to be keeping himself in the background. I wonder why?

RARE BARGAINS

IN "RINGLET" BARRED ROCK HENS

To quickly reduce the number on my farm for summer I will sell **grand breeding and exhibition yearling hens** at prices that are **matchless bargains**. These hens are now in my matings and could not have been bought earlier for **much more money**.

The wisdom of buying "Ringlets" now for show or next season's breeding is **absolute and positive**—it is sound business judgment; better than putting money in stocks, bonds, or a savings bank. This **summer reduction sale** of yearling birds stands out head and shoulders among the multitude of bargains now being offered.

The "Ringlets" have an international leadership. They encircle the globe and are bred in every land and country where Barred Rocks are known.

Every factor known to the science of Barred Rock breeding has been done to bring my "Ringlets" to their present matchless state—**THE IDEALS OF THE NEW STANDARD OF PERFECTION**.

The situation spells opportunity, make it yours and now. I will sell in any numbers and mate with cocks to produce winners if desired. The "Ringlets" have won and made money for others, they will win and make money for you.

Splendid new 48-page catalogue mailed upon request. It is full of original illustrations of New York winners from life. See my ad on back cover. Address

Shows, Associations and Clubs

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News

NEWARK, O.

The Newark (O.) Fanciers' Association will hold their fifth annual exhibit this year, Dec. 31, 1907, to Jan. 4, 1908.

This show will no doubt be the largest and best in central Ohio, as 810 birds were on exhibit last year, and figuring the same rate of increase in numbers and interest the next show will see 1,000 birds on exhibit, with 3,000 persons in attendance.

The association is composed of a large number of hustling, upright business men, and has the reputation for fairness and ability to meet all obligations, which it desires to maintain, and as the exhibit of last year netted a comfortable balance on the financial end, those who exhibit and attend this coming show will be well rewarded.

Premiums will be paid on the per cent plan, besides a large number of beautiful and valuable cups, special premiums and ribbons, etc.

The premium list will be ready Dec. 2, and poultrymen should send for one, and make it a part of their plans to attend, as it is one of the early shows.

J. L. Todd, an expert judge, with long experience both as a judge and breeder, of Woodward, Iowa, will do the scoring. Ed M. Larason, Secy.

Newark, Ohio.

ROCKFORD, ILL.

The officers of the Rockford Poultry and Pet Stock Association are making more extensive preparations than ever for the show to be given in the new armory at Rockford, Ill., Jan. 13 to 18, 1908. This show has grown each year and is one of the largest attended shows in this section of the country, the paid attendance last year being over 8,000. Exhibits of poultry were received from five states last year and the prospects are this year that this big show will be even more far-reaching in its influence.

Charles S. Gilbert, Secy.

MONTPELIER, O.

The Williams County Poultry and Pet Stock Association will hold its fourth annual show January 1, 2, 3 and 4, 1908, at Montpelier, Ohio, with the well-known judge, James A. Tucker, of Concord, Mich. The association held a very successful show last season and aroused considerable local enthusiasm, and it is

expected that the show this season will be one of the best in northwestern Ohio. More cash and special premiums will be added this year, and also silver cups. All premiums paid before close of show. We extend a welcome invitation to all poultry and pet stock fanciers.

B. Inaus,

President.

William Blum,

Secretary.

Mrs. J. C. Storer,

Assistant Secretary and Treasurer.

FORT WORTH, TEX.

The Fort Worth Poultry and Pet Stock Association of Fort Worth will have an exhibition Dec. 3-6, 1907. The purpose is to make it the greatest by far that the state has ever had. The premiums will be adjusted to every variety.

Four Departments.

Poultry—A premium of \$75 for the first and \$25 for the second best pen of any breed (bantams excluded).

Best display of poultry, premium \$10. Other special premiums. First, second, third and fourth premiums on cocks, cockerels, hens, pullets and pens. Mr. E. C. McCray of Meridian, superintendent.

The pet stock department will be a prominent feature of the show. A special committee will have charge of the bench (dog) show. This committee is composed of J. B. Mitchell, John Sneed, Dr. J. W. Irion, W. L. Sargent, W. H. Ordway and P. W. Hunt. Mr. John Sneed of the Dallas News, superintendent.

The pigeons, bantams and all pet stock other than dogs and ponies will be under the management of W. P. Hunt of Fort Worth.

The ponies, riding and driving contests by children, decorated pony vehicles and other features will be under the direction of one yet to be selected.

Each of the four divisions will have its own superintendent and judge.

The catalogue is now in preparation. It will contain rules, premium list and many matters of interest to every poultryman and pet stock fancier.

Are you a member of the association? If not, why not? An earnest solicitation is extended to you, your neighbors and friends to become identified with us.

Will you give us the names of poultrymen and fanciers of pet stock in your vicinity? N. B. Moore, Secy.

SCHENECTADY, N. Y.

The Electric City Poultry and Pet Stock Association of Schenectady, N. Y., have set the following dates for their 1908 show: Jan. 28 to Feb. 1, inclusive.

Schenectady puts on one of the best shows held in New York state, and any bird that wins the blue ribbon must be a good one, for many of the Madison Square and Boston winners are shown here.

This will be the seventh annual show held by the association, which speaks well for the management, who give the birds entrusted to them the very best of care, and many a bird is returned to the exhibitor in better condition than it was received.

Only the best judges are employed and every exhibitor can be sure that his birds will be judged on their merits, and the best bird will win.

The association is incorporated under the laws of the state of New York, and is composed of business and professional men as well as fanciers, and it would be hard to find a "hotter" bunch of chicken cranks.

They will hold a clam bake, at the farm of Poultry Judge John D. Jaquins, the first week in October—on the date of their annual meeting.

I. L. Whitmyre, Secy.

WASHINGTON STATE FAIR.

The fourteenth annual Washington State Fair will be held at Tacoma, Wash., Sept. 23-28, 1907. In the poultry department they are offering a large amount in cash prizes, which will no doubt bring out a large number of competitors. For entry blanks or further information in regard to poultry department, address H. H. Collier, superintendent poultry department, Tacoma, Wash. For complete state fair premium list and any other general information about this fair, address

G. A. Graham.

North Yakima, Wash.

LIBERTY, MO.

The poultry breeders of Clay county, Missouri, have organized a poultry association to be known as the Clay County Poultry Association, with headquarters at Liberty, Mo. The following officers were elected: Dr. J. H. Casey, president; Mrs. M. J. Diemer, vice-president; A. J. Robison, secretary; Mrs. A. T. Dean, treasurer. It is the intention of the association to hold regular annual exhibits of thoroughbred poultry and to make the association one of the best in the country.

DENISON, IOWA.

The Boyer Valley Poultry Association will have its next exhibition at Denison, Iowa, Dec. 11, 12, 13 and 14. This is the third exhibition and every ef-

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE; BOTH OLD AND YOUNG.** Illustrated circular free.

fort is being made to make this one larger and better than the previous shows. The officers and members are composed of practical poultry raisers and fanciers. Good liberal cash prizes will be put up, besides a number of trophy cups. Write E. R. Cadwell, secretary, Dunlap, Iowa, for further information and request for free premium list.

ELGIN, ILL.

The ninth annual exhibition of the Elgin Poultry Association will be held Dec. 30, 1907, to Jan. 4, 1908. The judging will be done by score card, and three of the best judges that could be procured have been engaged to place the awards. The Elgin Poultry shows have always been a success in every way and have steadily increased in size and quality until they now claim a place among the largest shows in the mid-west. For further information address

W. W. Britton, Secy.

Elgin, Ill.

MONMOUTH, ILL.

The fourth annual show of the Warren County Poultry and Corn Association will be held Jan. 13 to 18, 1908. Monmouth has the best show in western Illinois. One thousand dollars in cash and special prizes. G. D. McClaskey of Fremont, Neb., will place the awards. Sanford De Long, Pres. Fred E. Wright, Secy.

NAZARETH, PA.

The Northampton County Agricultural Society will hold its fifty-fifth annual fair at Nazareth, Pa., from Sept. 10 to 13. This fair always has a fine poultry show and is offering fine premiums in this department. Write for new catalogue to

J. R. Reinheimer, Secy.

Cram, Carey; treasurer, Charles McClave, New London; executive committee, C. M. Emerson of Columbus, Ira C. Keller of Prospect, S. T. Campbell of Mansfield, A. D. Hosterman of Springfield, Joe Coleman of Belleville, and George Wendt of Kenton.

A strong sentiment was manifested in favor of holding a show this coming winter at Columbus. The dates selected were the week beginning Jan. 20, 1908. Conditions in the central part of the state are ripe for a large poultry show and from the fact that there are interested members in all parts of the state it is expected that it will be a record breaker. Judges will be announced later.

Charles E. Cram, Secy.

OHIO BRANCH OF THE AMERICAN POULTRY ASSOCIATION ORGANIZED AND WILL HOLD A SHOW AT COLUMBUS THE WEEK BEGINNING JANUARY 20, 1908.

An Ohio branch of the A. P. A. was organized at a meeting held at Columbus, Thursday, July 11. A lively interest was manifested, several new applications for membership were reported, and altogether the start made is regarded as a very promising one.

The following officers were elected: invitation to become members, so their names will appear in the catalogue, and as a special inducement offers a fully paid up membership to Oct. 1, 1908, for \$1.

The club will offer special ribbons at any show whose secretary will ask for them. Members are requested to ask for the ribbons for any show at which they are intending to exhibit. Send in the names and addresses of show secretaries early so these specials can be listed in the premium lists of the shows.

This club is alive and growing and it is to the interest of every breeder of Buff Wyandottes to join and help bring this fine breed to the more general notice of American fanciers and poultrymen. Correspond at once with the secretary, Henry R. Ingalls, Greenville, N. Y.

HINTS FOR THE POULTRY WORLD.

It is one of the worst crimes of man, at least it appears so to me, to be cruel to dumb creatures, and yet it is a very common fault. I think some of the worst cases of cruelty to animals occur in the poultry business, especially in the city, where the fowls are compelled to be confined.

There is that small run with fifty or one hundred chickens in it. The owner thinks to get rich next winter with eggs laid by his early hatched pullets or by his early broilers. He provides no shade, no green food, and not a quarter enough water for his flock, yet he will expect to get winter eggs and if he doesn't will blame the breed and next year try another. The only thing his chicks have enough of is lice. With these his flock is well supplied and yet he grumbles when his chicks die off like poisoned rats.

City poultry raiser, put away your

pipe and that dime novel one hour earlier each night, go to bed, and arise one hour earlier the next morning. Spend every minute of that extra hour on your poultry and notice the result.

Poultry of all ages should be greased or powdered at least once a week. One can not be too free with the lice powder. I had a hen only this week that apparently went crazy when I was feeding her. She tried to stand on her head and did all manner of crazy stunts. I immediately separated her from the rest of the flock. She breathed hard and her head turned a deep purple in color. I examined her body carefully and found two lice. I covered her with a good insect powder. Having previously lost fowls with this same trouble, I put some of the powder in her ears and in a short time she was much better, but very weak. She is improving fast. Although I had dusted her with powder regularly lice would have killed her if I had not been careful. This shows the importance of exterminating lice from your premises.

Another common fault in city poultry raising is not feeding the birds enough. They should have all they will eat, none to be left.

Inbreeding is another dangerous fault. Introduce new blood into your flock each year or two years at the outside. Not long ago I heard a man say that he was going to give up a certain breed he had. I asked him "Why?" Well, his answer was something like this: "I have bred this

variety four years and each year they get smaller. That is why."

Summary: Avoid crowding. Provide shade, green food and plenty of water. Remember that lice are your worst enemy and cut down the profits. Feed the fowls all they will eat. Do not forget to introduce new blood into your flock each year as inbreeding is dangerous.

H. L. Cook.

Pittsfield, Mass.

AN IMPORTANT LOT OF COLUMBIAN WYANDOTTES.

On account of a change of business Clint H. Onus, who has been so successful with his Columbian Wyandottes at the Chicago show the past three years, was compelled to sell all his stock and the cream of his old and young birds has been sold to Aug. D. Arnold of Dillsburg, Pa. This flock added to Mr. Arnold's noted flock gives him an aggregation of Columbians that all who are interested in this grand variety of fowls will do well to take notice of. He has 400 yearling birds for sale now, and as he has decided to not show the coming season he will sell off the best old and young birds for show. See his ad elsewhere.

\$50 CASH and \$10 Per Month buys a \$500 25 acre poultry, fruit and vegetable farm. New 3 room cottage like cut. Best climate, water and markets in Sunny Virginia. Other lands \$10 acre up. Send for beautiful pamphlet, maps and rates.

F. H. LA BAUME,
Land Agent, Norfolk & Western Railway, Box MT, Roanoke, Va.

AMATITE FOR EVERY ROOF INSTEAD OF SHINGLES

On house or barn, on old buildings or new, Amatite gives *better protection* than shingles at a *much lower cost*.

This roofing is making friends everywhere because it is easy to lay,—because it wears well,—because it never leaks, and principally because it needs no attention after it is once laid. *No coating or painting is ever required.*

Its *real mineral surface* offers a better protection than paint.

If you have a roof of any kind that needs covering, don't fail to send for a **Free Sample of Amatite**. Once you see how much superior it is to the ordinary, smooth-surface roofings that need constant painting and attention, you will order no other kind. Address nearest office.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Editor American Poultry Journal.

Dear Sir: In answer to F. H. R., Nashville, Tenn., you say you cannot tell and ask for some reader to answer.

I have had quite a little trouble identical with F. H. R. until I found the cause. I found it to be due to an error in diet, which did not cause any trouble until the hen became broody, and upon becoming broody she became inactive, thus allowing the "clogging up" of the portal circulation, etc. After a few hens had set a week or so and the trouble began I then began to investigate and made a few post-mortems and a few ante-mortems, that is, I did not wait for the hens to die of the trouble, but I killed them at different stages and in all cases, both post and ante-mortem, I found the same conditions, only more extensive in the post cases.

In all I found a fatty degeneration of heart with cirrosis of liver. After a hen would begin to sit she would, of course, cease to exercise, consequently the fatty condition would become worse, also the liver would become more congested and closure of the hepatic duct took place, with subsequent inflammation of stomach, and had he held the hens with head down a slimy fluid would have run from the mouth, also the eyes would have had a sympathetic irritation with froth in same.

The remedy is symptomatic treatment, with correction of diet and induce plenty of exercise to the flock.

The medicinal remedy, generally speaking, is a hepatic tablet thrice daily of podophyllin, euonymin, ipecac, calomel, aloin. Twenty drops elix engyme in water three times a day, with five quarts of lycothymoline added. The above treatment for an effected hen with

diet of boiled rice and milk until blueness of comb and other symptoms subside, gradually going to a more substantial diet.

I hope I have made myself clear to F. H. R., Nashville, Tenn. If not, I will gladly answer any questions relative to same.

Karl T. Brown, M. D.
Crawfordsville, Ind.

Editor American Poultry Journal.

Dear Sir: In complying with your request to answer questions of F. H. R., of Nashville, Tenn., I wish to state I had a hen affected in the same manner. My hen was lousy. I thought that was the trouble. I gave her lime water in her drinking water and she got all right and hatched well. Of course get rid of the lice.

S. B. Sweet.
Rushville, Ind.

Editor American Poultry Journal.

Dear Sir: I am a reader of the American Poultry Journal and read with interest the question of F. H. R. in the July issue.

As I have had trouble of the same kind I decided to write to you and let you know my experience, for perhaps it will be of some benefit to your readers.

My hens have been fed, kept and are in the same condition as F. H. R.'s, but the trouble began as soon as I set them.

They had the same symptoms in every particular, and before I had got busy to find out what was the matter I had lost two of my finest first prize birds.

I lay the trouble in my case to too close confinement to the nests. This year I built nests with covers to them, so that the hens could not come off only as I let them off.

I began by letting them off every two

days. In about a week and a half two of them got droopy and in three or four days died, and it is needless to add that I at once took the covers off the nests, and now I make my hens come off every day the first two weeks whether they want to or not, and I have had no trouble with them since.

I believe a hen should come off every day during the first two weeks of setting, and the last week let her come off as she desires.

J. L. White.
Parkersburg, W. Va.

Editor American Poultry Journal.

Dear Sir: I had similar experience with setting hens developing diarrhoea as F. H. R., Nashville, Tenn. I found it was due to dusting them with an insect powder containing a large per cent of carbolic acid. The heat from their bodies caused absorption, causing an enteritis, etc. I lost two and came near losing two others. One I dusted in the morning and she was nearly dead by night.

C. M. Baskerville, M. D.
Mt. Pleasant, Mich.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) What makes the feathers come off the heads and necks of young chickens about 8 to 10 weeks old? Some of them are perfectly naked. (2) What makes the membrane in the egg shell become tough after the chicks have chipped the shell clear around, the membrane remaining partly intact and holding chick in shell after it is ready to come out? Is it too much moisture or not enough? (3) Are incubators operated successfully at an altitude of 4,600 ft.? We have operated two all season at this altitude with very poor success, securing never over 50 per cent of fertile eggs, while hens covering eggs from same stock bring off from 95 to 100 per cent of fertile eggs. (4) What is the correct point to be registered by a hygrometer in egg chamber? That is, what is the right condition for the atmosphere in egg chamber to be normal—a little dryer than normal, or a little more moist?

C. R. G.
Salinas, N. M.

Answer. (1) Lice and mites is the usual cause. (2) This is due to lack of moisture during incubation. (3) Incubator manufacturers claim they are; but we are unable to say from experience, but we see no reason why they cannot be operated successfully at this altitude, if the necessary moisture is supplied. (4) We are unable to say, as we always judge from the appearance of the air cell in the egg. If the air cell appears too large, which shows a lack of moisture, we supply the moisture necessary.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue the following: (1) A few of my chicks had the gapes when about three weeks old and I got them over it, but now (six weeks old) they gape very frantically in a day's time, which I thought strange. Then I killed one and examined it and found several pieces about the size of a wheat grain of what I thought might be dead gape worms. What is it, and cure for same? (2) Are the "Model Java" chickens better layers, or do they exceed the Leghorns in any way? (3) What do you advise me to raise in the way of herbage that would be good for chicken feed next winter? (4) What is a good feed

Because You Need The Money

It's your business and if you don't attend to it, who will? You cannot afford to keep cows for fun. That isn't business, and, furthermore, it isn't necessary. There is money in cow keeping if you go at it right, and besides there is more fun in going at it right than there is in staying wrong.

You need a Tubular Cream Separator because it will make money for you; because it saves labor; because it saves time; because it means all the difference between cow profits and cow losses.

Look into this matter; see what a Tubular will do for you and buy one because you need it.

How would you like our book "Business Dairying" and our catalog B. 205 both free. Write for them.

for chicks over two weeks old during the summer months? Don't you think corn too heating? W. K. Y.

Grater's Ford, Pa.

Answer.—(1) A few applications of turpentine will usually effect a cure in cases of this character. This can be applied with a soft feather. (2) We never heard of the "Model Java" chicken, therefore cannot say. (3) Rape, cabbage and sugar beets are good for winter feed. (4) There is nothing better than good wheat and clipped oats. Corn is too fattening.

Editor American Poultry Journal.

Dear Sir: In looking over your Poultry Journal each month I see paragraphs of questions and answers. I also would like to ask you for a little information regarding poultry.

Several of my hens are sickly. They sit around in a heap all day; do not eat any more than just enough to keep them alive; overbalance very easily. They seem to be weak in the legs. They are not very fat. They aren't lousy. You can't find a louse of any kind on them. Could you please tell me what ails them? About two months ago I lost a rooster and three hens. I kept the White Wyandottes. I came out the first morning and found two hens dead. Their combs were fire red, healthy looking; the next morning I found another hen dying; her head kept falling down on her and resting on the beak. Every once in a while she would jerk it up but it would fall right back again. The next morning I found my rooster dead. Nothing had killed them. I asked several poultry men about them; one of them came and looked at them but none could tell me what ailed them. Probably you could give me a pointer as to what the trouble was. W. E. K.

Detroit, Mich.

Answer.—This condition is usually brought about by overfeeding for egg production during the winter and early spring, which derange the internal organs and brings on a complication of diseases. The only remedy for this that we know of is to move them to new quarters and endeavor to stop egg production entirely for a time. Feed sparingly on an easily digested food and give a little fresh meat to eat about twice a week. They should also be supplied with plenty of sharp grit and charcoal. Keep them free from excitement. Also give them a little baking soda in their drinking water, a teaspoonful to each quart of water.

Editor American Poultry Journal.

Dear Sir: Please answer in next month's issue the following: (1) I have 50 chicks in a pen 12x16 feet. They were nice and fat until a few days ago, when they stopped eating; are lively, but thin. I have been feeding during the cold days of last week bran and chopped oats mornings, Cyphers developing food for other two meals. Kindly give your opinion as to the cause of eating so little. (2) I have 18 hens, with plenty of range. A number of their heads got entirely bare, scaly and sore. Also give your opinion of this and what can be done for it.

Bernhart, Pa.

J. L. B.

Answer.—(1) You have probably overfed them and thus stopped digestion. Give them plenty of exercise by feeding them in deep litter and making them scratch for all they get. (2) This is caused by a parasite called the depluming mite. Anoint the parts with

lard and flower of sulphur, two tablespoonfuls of the former to a teaspoonful of the latter. Carbolated vaseline is also good.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following: (1) In mixing 200 pounds bran, 100 pounds corn meal, 100 pounds middlings, 100 pounds gluten meal, 100 pounds linseed meal, 100 pounds beef scrap, in what shape should the beef scrap be? I have tried putting the beef in just as it is put up in small pieces about as large as wheat, but chickens do not eat it. Would it be better to grind it up fine before mixing it? (2) Is there a small grist mill made that I can grind corn, wheat and bone in?

Boise, Idaho.

Answer.—(1) The beef scraps should be in the form of a meal; a little coarser than corn meal. (2) Yes, write the Bovee Grinder Co., Waterloo, Iowa.

Editor American Poultry Journal.

Dear Sir: Please tell me or send me printed information about the raising of pheasants, and whether they would be likely to do well in Florida; which variety would probably do best down here?

Lake City, Fla.

Answer.—It is our understanding that pheasants do well in the south; but we are unable to say which variety would be the best for your purpose. We understand that the United States government is devoting considerable time and money to the development of the pheasant industry and by applying to the department of animal industry you will no doubt be supplied with a great deal of valuable information on this subject.

Editor American Poultry Journal.

Dear Sir: Please answer in your questions and answers column the following questions: (1) How many male birds should be kept with forty hens? (2) Will a space 50 feet by 40 feet be sufficient to yard forty hens? (3) How large a house would it require to house these forty hens? (4) Should the same instructions be followed for raising poultry in the South as in the North, East or West?

New Orleans, La.

Answer.—(1) If on free range, two; if confined in breeding yards, four. (2) Yes, if they are given proper care. (3) A house to accommodate 40 hens should contain about 400 square feet. (4) Yes, practically the same.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your valuable question and answer column: (1) Is it unusual for S. S. Hamburgs to show traces of feathers on their legs, and are they that have same fit for breeding purposes? (2) I bought an S. S. Hamburg cockerel last winter that is creamy yellow in color instead of white. Is he fit for breeding purposes?

Waterloo, Wis.

Answer.—(1) Hamburgs should not have feathers on their legs. Those that show this defect are not fit for breeding purposes. (2) No.

Editor American Poultry Journal.

Dear Sir: (1) Will you kindly give the best way of shipping baby chicks? (2) What advantage would there be in a root cutter, as chickens will eat up

"PITTSBURGH PERFECT"

IMPROVED POULTRY AND GARDEN FENCE

The BEST Fence IMPROVED

The original design made stronger and bottom spaces smaller by moving closer together the bottom wires and adding extra lines wires.

Smallest chicks cannot get through—largest animals can't break it.

At every contact point the wires are welded together—the lightest yet strongest construction known.

Tasty and ornamental in appearance.

A perfect and permanent protection and enclosure.

Adjusts to uneven ground—to extremes of temperature.

No top or bottom board required.

Regular—Top and bottom wires No. 10, others No. 13.

Heavy—Top and bottom wires No. 9, others No. 12.

Electrically welded fences for all purposes.

For further particulars write.

Pittsburgh Steel Co.—Pittsburgh, Pa.

clean most all vegetables without being cut.

Mrs. D. W. A.

Answer.—(1) Baby chicks can be shipped with perfect safety in a box about 4 inches high, 18 inches wide and 24 inches long. This should be made into two compartments by a partition in the middle. For a cover use burlap, over which nail lath about 3 inches apart. The burlap cover gives them plenty of air, and at the same time allows the foul air to escape. Fifty to 100 day old chicks can be shipped in a box this size. (2) The advantages of a root cutter is where the vegetables are cooked before being fed.

Editor American Poultry Journal.

Dear Sir: Please answer this question in your next issue: I have had quite a lot of sick chickens this summer. They are all Barred Rocks. They go about with their heads up and they are continually swallowing all the time. They will eat up to within a day or two before they die. I have had some to get over it. The largest ones that had it would come out pretty good, but the little ones that had it would die. When you would hold them up head downward there would be a slime or foamy substance come out of their mouth. We are feeding a chicken bread that we bake in the oven. It consists of corn meal, wheat middlings, oat feed and beef chops. We fed a lot of cracked corn at that time; we have stopped feeding so much cracked corn and we have been giving a mash with Dr. Hess' poultry pan-a-ee-a, and I think they are doing better. Could you give me a cause for this disease, and, if so, a remedy for same?

W. H. B.

Maynard, Mass.

Answer.—The trouble is no doubt due to your method of feeding, which has caused sour crop. For this there is nothing better than bicarbonate of soda (common baking soda), a teaspoonful to a pint of drinking water. The chicks should be fed very sparingly for a few days on food that is easily digested. They should also be given charcoal. This aids digestion and sweetens the crop.

Editor American Poultry Journal.

Dear Sir: I have a nice pen of S. C. B. Leghorns; old birds, marked well and rich, but in my young stock they are rich at hatching, but in two weeks white appears in wing and stays four to six weeks and gradually disappears. What is the trouble, and will that affect stock?

G. T. W. K.

Richmond, Va.

Answer.—This is not unusual in this variety, and in all probability these birds will be good in color when fully matured.

Editor American Poultry Journal.

Dear Sir: I have two White Rock hens that are suffering with swollen feet. Both are laying and are apparently in good health aside from trouble with feet. What is the cause and what am I to do for it?

A. G. A.

Aurora, Ill.

Answer.—We are unable to tell the cause, as you do not give enough detail. Soak the feet in warm water to reduce inflammation, after which apply carbolic ointment. Frequent treatments of this character will no doubt affect a cure.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) Are dark yellow colored or blackish yel-

FEED FOR EGGS

No flock is too small to well repay winter feeding of cut green bone. Doubles egg production and makes early broilers.

tight to body, as if she had suffered greatly. On external examination found discharge from vent having the appearance of a broken egg, but no sign of any shell. Did not open her. She had free range, fed lightly of cracked corn, kaffir corn, wheat, etc., plenty of grit and fresh water. Was she egg-bound?

North Olean, N. Y.

C. C. M.

Answer.—This was evidently gangrene of the oviduct, caused by an egg which could not be expelled. This causes inflammation, which becomes more and more intense until it causes the death of the tissue. When the flesh dies it at once begins to decompose and putrify, and this condition is known as gangrene. The gangrenous walls of the oviduct are easily torn and the egg may then escape into the abdominal cavity. No treatment is of use in such a case, as peritonitis and septic infection occurs and leads to

death in very short time. An egg being broken in the passage will lead to the same results.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your questions and answers: (1) How would cement be for a floor in the chicken house in place of boards, and would it be as good as boards? (2) Would a cinder or gravel base of 4 to 6 inches covered with dry earth or sand make a good flooring for chicken house? (3) Is the Red Rope Neponset Roofing all right for chicken house, and where can I get it? (4) Where can I get sassafras poles for perches? (5) At this time of the year is it harder or best to raise chicks with or without the hen? (6) Where can I get Lathrop's chicken servers for chicks?

Ogden, Iowa.

W. C. B.

Answer.—(1) There is nothing better than cement. (2) This makes a very good floor for a chicken house, but is rather hard to keep clean. (3) This roofing is all right so far as we know. Consult the advertising columns of this magazine. (4) We are unable to say. Ask your lumber dealer. (5) We prefer to have the hen raise late hatched chicks. (6) We do not know. Try some poultry supply house.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following question in the August number of the Journal? I have a hen that goes on the nest to lay, and she comes off cackling, but she never lays. Please tell me what is the matter with her and give remedy if there is one.

Salem, O.

E. H.

Answer.—It is rather difficult to say what the trouble is. It may be that she is egg-bound. This can be determined by examination. We are of the opinion, however, that she eats her egg as soon as she lays. This can be determined by keeping a close watch on her. If it is neither one of these we would advise the use of the hatchet, as she is an unprofitable fowl to have upon the premises.

Editor American Poultry Journal.

Dear Sir: I had a little chicken about six weeks old go blind, so that it had to be killed, though perfectly healthy. Another one seemed to have the same trouble, a white cheesy substance forming in its eye. I immediately separated it, putting boric acid with a little camphor dissolved in water into the eye three times a day and rubbing it externally with la- into which I dropped a little tincture of arnica. The cheesy substance has loosened and come out twice, and the eyes still are watery and bother the chicken somewhat, though it is very lively and otherwise perfectly well. Do you know of any other similar case, and can you suggest any better treatment?

Evanston, Ill.

M. P. P.

Answer.—This is not an uncommon ailment among little chicks, and is usually caused by breeding from diseased stock, although it may be caused by a cold or lice. Your remedy is very good. We have had very good success in the treatment of this disease by using burnt alum in the eyes. Put a small piece of alum on a hot griddle and after allowing it to melt remove and pound or grind into a fine powder. A very small portion of this powder put into the eyes will remove all foreign matter. This should be repeated as often as necessary.

THE CARE OF FALL HATCHED CHICKS.

Most all the early chicks have been hatched and we must be making preparations for the late summer and fall chicks. Always study your hens and select the good, gentle hen that carries her brood off from the house. You can notice the hen that goes to the woods and fields with her brood. They grow and do a lot better than the ones that stand around the back yard. The one that goes off is always at work and the one that don't is always idle. The best time to hatch your fall chicks is in August, and they will get feathered before cold weather. Select your best hens and take a good sized box and fill it about two inches with moist earth and then take pine needles and make a god soft nest. Be sure you have it large enough and not too deep so the eggs will be piled on top of one another. Place a nest egg in it and let the hen set two or three days till she gets to setting good and then place fifteen uniform eggs with good shells and color under her.

Be sure she is free from lice. Dust her good with some good insect powder before setting and then once a week till she hatches, and then if she is still lousy take some sweet oil and some essence of sassafras and mix well and grease the old hen's head with it and then take a little and rub it on the little chicks' head and throat and then take a soft rag and wipe their heads off good. If you gum it on their heads and let it stay it will be sure to kill them, but just a little won't hurt them. Let the hen stay on the nest as long as she will before taking off and the little fellows will be good and strong. Have your coop made good and tight so it cannot get wet inside. Don't have any cracks for the vermin to get into it, but have it well ventilated and every pretty day air and sun it. Have it so you can turn it over and the sun can shine in it all day, and at night you can turn it back. Keep it clean. You can move it every day or two. Keep it well whitewashed and you won't be bothered with lice and mites.

Move the hen to the coop after taking her off and give some corn and some nice clean water in a shallow dish, and give the little fellows some grit, but don't feed till fifty hours old, and then give some bread crumbs moistened in sweet milk for the first few days, and then give any good chick food. When two or three weeks old feed crushed corn or any little grain. Don't give any sloppy food or it will cause bowel trouble. Keep the old hen in the coop for two or three days and then turn out when the dew is off the grass and it isn't raining. If the hen don't leave the house with her brood if you have a patch of woods or something sowed near your house just drive her to it and she will be mighty apt to go back to it. Keep her and the brood off from the house and they sure will grow and you will raise the most of them.

D. E. Merck.

In passing through this world let us not forget that character is everything. I'll quote Emerson: "Character is more than intellect. A great soul will be strong to live, as well as to think. Goodness outshines genius, as the sun makes the electric light cast a shadow."

SPECIAL THIS MONTH

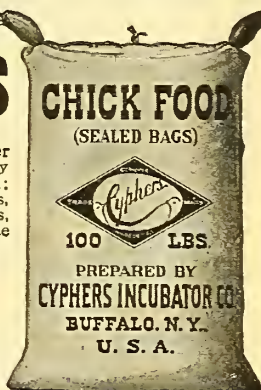

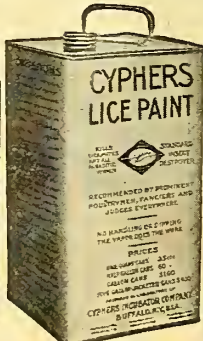

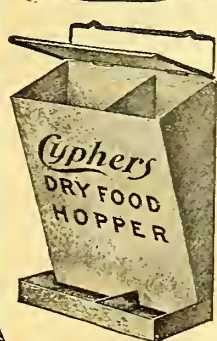

This month you especially need one of our Line of Lice Killers; and, now that eggs are low priced, a gallon or so of Save All Egg Preservative—enough for 65 dozen eggs—and a bag or two of our Chick Food. Cyphers Chick Food is Most Desirable because it is balanced and mixed by experts and contains just that variety and quantity of grains that young chicks thrive on. It is balanced with a view to producing muscle, flesh and feathers, and aids in promoting digestion, so avoiding diarrhoea and other chick troubles. Cyphers Chick Food is Most Desirable also because it is Best Value for the Money as it Contains No Grit to Weigh Heavily and, Best of all, No Weed Seeds to be discarded—wasted—left by the Chicks. Every Bag is Sealed to prevent adulteration—Refuse it if the Seal is broken. Sold by 7,000 agents and at all our Branches.

that will be found of great value to anyone who is interested in this variety. Every reader of American Poultry Journal should send for a copy of this catalogue and learn what one man has done with this one variety of fowl by honest and persistent efforts. Mr. Northup informs us that he has taken his son into partnership with him and in the future the firm will be known as George H. Northup & Son. They

are now offering for sale about one-half of their single comb Black Minorca breeding stock to make room for the largest and best flock of chicks they have ever owned. Better write them today and mention American Poultry Journal.

BABY CHICKS VS. EGGS.

That the culture of poultry is a great and growing enterprise is so obvious that we need not at present dazzle the reader with a glittering array of statistics, but simply state a self-evident fact by saying it pays a good profit on the investment if conducted with skill and tact; otherwise the results will be disappointing.

It is also evident that many perplexities confront the amateur and old-timer and probably always will. Among the causes most pregnant with disaster this season the infertility of eggs seems to have scored a high record, and I should be pleased to give a little hint based upon actual experience in poultrydom.

In the June number of the American Poultry Journal, page 578, Paul Thompson, of Maywood, Ill., relates his and his neighbors' troubles along this line in a very well-written article, and without a doubt there are hundreds of "Paul Thompsons" who can say "Me, too!" I would ask all of these, "Why not try purchasing baby chicks from some reliable hatchery?" In this way one never pays for an egg that is not fertile nor is the chance for substitution of inferior eggs as great as when buying eggs

for setting. Even a novice can tell the difference between a baby Rock and a Leghorn.

We smile at the man who "buys a pig in a punch," but would not the laughter be more than equalized were we to tell him that we bought a chicken in the shell, waited three weeks for the shell to open, then found we had paid a higher price for a foul smell than we would have paid for a ready-hatched chicken?

The greatest objection to this method of buying chicks is that "our grandfathers didn't do it that way." Well, not many of our grandfathers rode in an electric car or listened to a phonograph. Let us get out of time-worn ruts and travel the newer highway.

The Ohio Hatchery & Manufacturing Company, of Bellevue, O., have prepared a little pamphlet entitled "Baby Chicks," which tells how Paul Thompson might have gloried in the fortunate number of 18 live chickens instead of lamenting over the "unlucky number thirteen" eggs that cost him \$3, and will mail a copy to those interested upon receipt of address. Chas. A. Thompson.

Bellevue, O., July 5, 1907.

HOW TO TEST FRESH EGGS.

Those who sell strictly fresh eggs are sometimes annoyed on discovering one of doubtful age among those collected, and as some hens are prone to steal their nests it occasionally happens that a large number of eggs will be found, frequently several hens laying in the same nest. In summer the hens prefer a cool and quiet place, being partial to comfort, and if the flock is large the number of eggs laid in nests outside of the poultry house will reach into dozens.

If the poultryman can distinguish the fresh eggs from those laid previously it will be a great advantage. Of course, as all well know, eggs can be examined with a strong light in a dark room, and all eggs should be clear. Each egg contains an air bubble situated a little to one side of the large end. In a new laid egg this bubble is very small, occupying a space that is barely noticeable. The air bubble grows a little larger each day. If it is as large as a half an inch square (it is oblong in shape) the egg is not fresh. The way to learn is by comparison. Use an egg just laid and closely examine the air bubble with a strong light. Make a test of several, place them aside, and next compare them with eggs laid on that day, and so with the third and fourth days or more. A few days' practice will render the matter of selection very easy, and after a while it will not be necessary to use a strong light, as the egg can be examined by holding it to the sunlight. In other words, to give a rule, the smaller the air bubble the fresher the egg. When a fresh egg is cooked the contents adhere to the shell, while the shell of a stale egg will pull off like an orange. Earnest M. Wolford.

McComb, Ohio.

All aboard for Niagara. I trust it will be a good, lively meeting and some good work done. Branches taken in and the fancy pushed forward.

A teaspoonful of salt added to a quart of milk will prevent it from souring for a couple of days.

Put salt on a dull fire if you wish to revive it for broiling meat.

CONGO ROOFING

The time to be satisfied with your roofing is five years after you bought it. That's the test that Congo asks for. Durability is the only thing about a roofing that is really indispensable and Congo is full of it in the shape of high-grade weather-proof materials put together in the right way. Send for a free sample and see for yourself. Cut open the sample—test it. If you can recognize what is good in a roofing, you will decide on Congo.

Woman's Home Department

MABEL BATES WILLIAMS, Editor

This Department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others, a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it. All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton Street, Chicago, Illinois.

HOUSEHOLD CONVENIENCES.

We are too prone to think that the good old ways of our mothers are plenty good enough for us. Have you ever noticed the kitchen of the average housewife? Because her mother did not know anything about the little conveniences which crowd the counters of the modern stores, she thinks that she must follow in her footsteps, and so she goes on, day after day, using old, out of date kitchen utensils, perhaps even beating her eggs with an old-fashioned egg whisk, and using twenty minutes of her valuable time, to say nothing of strength, when a 10 cent "Dover" beater would do the work in two minutes. I have always noticed that the average man, whether on the farm or in the office, thinks he must keep in close touch with every new and up-to-date mechanical device which will help him in his work. His machinery often costs up into the hundreds of dollars in a season, but he finds that it is money well invested, and that his returns are correspondingly greater in the course of the year. The pity of it all is that the articles needed to make woman's work easy around the home cost only pennies and dimes, where his costs dollars, yet she goes on using an old, worn out broom, and wearing out her best carpet with every sweeping, when 25 cents would save both muscle and carpet. Her cooking dishes are worn until it is a wonder that the family does not die from poisoning, when acids are left in the rusty tins, though new tins of all descriptions can be bought at any notion or hardware store for 5 cents or 10 cents, at the most. The next time you go shopping, take a dollar along for "kitchen luxuries," and make a thorough investigation of the scores of new labor-saving devices which have been placed on the market since you made your last visit to the kitchen department of the store. If there is a "ten cent" store in town, do not fail to include that in your list of shops to be visited. You will be surprised at the number of things which that dollar will buy, and you will then and there make a firm resolve not to do without things hereafter which will simplify your work and

save time and strength, at the expense of so trifling an amount. I know a little woman who has been married five years. She started in with five dozen clothespins, and for the last year has spent at least two extra hours on every washing day, waiting for clothes to dry, so that she can hang out more, and have enough pins to go around. Last week she went to town, and dropped in at a notion store. She came home with five dozen new pins, for which she spent 5 cents, and she has been berating herself ever since, as she thinks of the weariness of body and spirit which she has been wasting on her washing, during all these months. To be sure, this is an aggravated case, but just stop a minute and think whether you are not letting yourself get tired and cross over something as simple as that. And tell the good man of the house that hereafter your part of the business is going to be conducted along as practical and sensible and labor-saving lines as is his.

EXPERIENCE DEPARTMENT.

Mrs. A. L. J. of Youngstown, Pa., writes that she has tried patent cherry pitters for several years, but the cherries are always so torn that they are only fit for jam or marmalade. Last year a friend told her to pit the cherries with the loop of a strong, new hair pin, and the result is so satisfactory, both in speed, ease and in securing whole looking, unbroken cherries, that she has given up the use of the pitter except in the making of cherry jam, or spiced cherries.

Mrs. C. T. M. of Salida, Tenn., says: "I noticed several months ago in our home department the hint about using dried corn cobs, soaked in kerosene, for kindlers, and tried it, much to my satisfaction. I live in a city, and find it difficult to get the shucked cobs, but I am saving all the cobs from the corn I buy this summer, and drying them in the sun, and expect to have a good supply before fall. By the way, do the readers of this department know what a treasure trove they have, if a roof is reshingled? As a rule, the old shingles are considered a nuisance, and the owner will gladly let you have all you

can take away. They make the best kindlers I ever had."

Mrs. Mary B. Rice, of Atlanta, Ga., writes: "I wonder if Northern readers have ever tried plain boiled rice, instead of breadcrumbs, as a dressing for chicken. We Southern housekeepers often use it, and prefer it to the better known way of making the dressing. Rice also makes a delicious salad, in combination with salmon, when served with a good cooked dressing. If your ice box gets empty between the visits of the ice man, wrap the raw meat in a cloth wet with vinegar, and place it in a covered dish on the cellar floor. The vinegar not only keeps away flies, and preserves the meat, but makes it deliciously tender."

Says Mrs. B. M. Young, of Beloit, Wis.: "Although I am a housekeeper of many years' standing, I am just beginning to find out the uses to which baking soda can be put. I always put a scant half teaspoonful in the kettle with every quart of acid fruit, such as gooseberries, rhubarb, plums, etc., and it saves a lot of sugar. If a little soda is added to the water in which meat or vegetables are being cooked, it will make them tender and sweet, hasten the cooking, and in case of meat which has been kept a suspicion too long, will remove all tainted odor. If the meat seems perfectly fresh except for the outer edge, I always cut this away carefully, and wash the meat thoroughly in cold water in which I use a liberal quantity of soda. If there is no time to heat dishwater, use cold water, with soda, and it will remove grease quickly and well. Last, but by no means least, when an obstinate stain in my white sink would not yield to even the patent cleansers, I found that a liberal application of soda and 'elbow grease' accomplished the desired result."

Mrs. L. H. D. of East Las Vegas, N. M., writes: "The bright rays of the southern sun faded my little daughter's pretty Sunday dimity, with its pink rosebuds, until it was not fit to be worn. I boiled it in water in which I had put a quantity of cream of tartar, and it came out perfectly white. Instead of feeling that she is wearing an old dress, little Mary figures that she has had 'two for the price of one' and says her 'new' white gown is even nicer than the original."

Mrs. N. M. S. of Ault, Colo., says: "I wonder if the contributors to this department have ever made use of my recent discoveries regarding sour milk. A neighbor saw me looking in despair at a badly mildewed undershirt, and told me to soak it in sour milk for twenty-four hours before washing it. I did so, afterward drying it in the hot sun, and to my joy the mildew entirely disappeared. I gave my table silver a sour milk bath, and it did away with the necessity of the much dreaded

::

Iona, New Jersey

morning devoted to silver polish, and my latest addition to the sour milk list is the discovery that molded and discolored can tops are perfectly cleaned by soaking them in sour milk. Try it this summer when the canning season arrives.

A CHICKEN HOMILY.

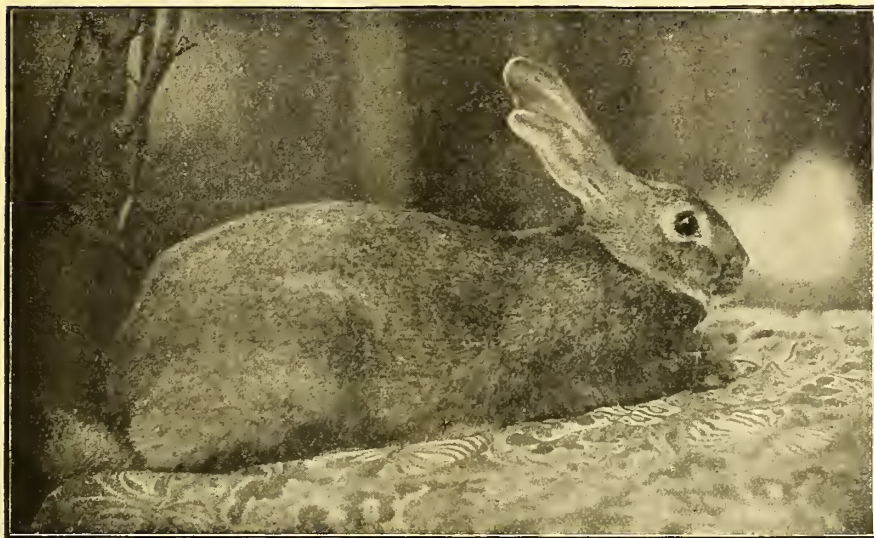

In the summer one tires of heavy, greasy meats, and nothing tastes quite as good as chicken. There are always bits of left over meat on the bones, which seem too good to throw away, and yet, at first glance, seem hardly enough to make a second meal for the family. The next time you have chicken for your Sunday dinner, try one of my methods of serving it on Monday. If your family is anything like mine, they will tell you that the second day's dinner beats the original.

Chicken With Rice—If there are bits of dressing with the chicken, it will

Add two finely chopped hard-boiled eggs, a little chopped parsley, salt and pepper, and a cupful of finely chopped cold chicken. Place by spoonfuls in pastry shells, which have been heated in the oven, and serve at once. The shells can be made a day or two before, and reheated as needed. This makes a fine meat course for large companies, and is a favorite luncheon dish, serving a spoonful of creamed peas on the same plate.

Chicken Turnover—Have ready a young chicken, boiled until the meat will slip from the bones, and seasoned to taste, with plenty of rich gravy. Make a baking powder biscuit dough, and bake, as for a shortcake. Split it, butter liberally, arrange the chicken on it, put on the top crust and serve hot, with quantities of gravy poured over it.

Chicken in Aspic Jelly—Soak half a package of gelatin in half a cup of cold water until it is soft. Have ready

"Daisy Girl 6th." Bred and owned by J. R. Counihan, Wheeling, W. Va.

make this even better. Shred all the scraps, and warm them thoroughly in the left over gravy, but do not let them cook after they have reached the boiling point. Have ready some hot rice, cooked in southern style, with every kernel whole. Arrange this in a ring on the platter and pour the chicken in the center.

Chicken Fritters—Scald a pint of milk in which a little onion has been sliced. Add the beaten yolks of three eggs, and enough flour, mixed with cold milk, to make a thick gravy. Add a little mustard, salt and pepper to taste, a lump of butter the size of a walnut, and a pint of minced chicken. Pour in a square tin to get cold, cut in slices, dip in beaten egg and crumbs, and fry, using plenty of fat in the frying pan.

Chicken Fritters, No. 2—Use the same recipe, but while it is still hot, dip by spoonfuls onto a griddle, and fry, like pancakes. If the mixture is not thick enough, add flour a little at a time until the right consistency is reached.

Chicken Pates—Make a rich drawn butter gravy, which is made by bubbling together equal parts of butter and flour, and adding boiling water until it is of the consistency of gravy.

half a pint of clear chicken stock, well seasoned, and half a pint of tomatoes, cooked until thick and run through a sieve. A smaller amount of tomato catsup is equally good, but in this case, use more chicken stock. Add all to the gelatin, stir until it has thoroughly dissolved, and mix with it a quart of chicken, cut in small squares. Pour the mixture into a well wetted mold and let it stand on ice for several hours to harden. If you wish a very elaborate dish, before adding the chicken, pour a little of the jelly into the wet mold, and as it hardens place in some fancy design stuffed olives, or slices of hard-boiled egg. When this has set, pour in the rest of the chicken mixture. Serve either with a cooked mayonnaise dressing, or with whipped cream.

Mrs. Inez A. Whipple.
Englewood, Ill.

SUMMER VEGETABLES.

Green Pea Soup—Shell two quarts of fresh green peas, wash the shells and cover them with a quart of boiling water. Cook for five minutes, and drain. Add the peas to the water and cook until tender, then rub through a colander. Bubble together two table-spoonfuls of butter and one of flour,

add a pint of hot milk, a little sugar, pepper and salt to taste, and the peas. Serve very hot, with little squares of crisp toasted bread.

Creamed Spinach—Cook, drain and chop a peck of spinach. Bubble together two rounding tablespoons of butter with the same amount of flour. Turn in the spinach and stir for a few moments, then add a cupful of cream, in which has been dissolved a bit of soda as large as a pea. Let it become thoroughly hot, season to taste and serve at once.

Stuffed Green Peppers—Cut a slice from the stem end and remove the seeds. Fill with a mixture of chopped and seasoned cold meat and boiled rice, one chopped onion, four chopped raw tomatoes and add plenty of salt. Bake for an hour in a slow oven.

Lima Bean Salad—One pint of cooked beans, three sliced hard-boiled eggs, a small onion, finely shredded. Place on lettuce leaves and cover with a cooked dressing.

RAILROAD COURTESY.

TRAVELERS LIKE THE ALTON BRAND.

"Only Way" Conductors Polite and Engineers Good Fellows.

The politeness of Chicago & Alton trainmen is proverbial. Recognition of this trait has been officially and legally recognized to the extent of a man leaving a Chicago & Alton conductor \$1,000 on account of being polite, and by a strange coincidence the names of two Chicago & Alton trainmen bear out the road's reputation. On a train running on its Illinois lines the conductor's name happens to be Polite and the engineer's name is Goodfellow. The officials of the Alton will not admit that they make it a rule to pick out men whose names denote courtesy and good nature; but it is well known they are ever alert to secure the most courteous trainmen and when their names bear out their reputations, why, so much the better.

"Scientific Egg Culture" is the title of a very attractive booklet now being sent out by the Locust Lawn Farm, Aurora, Ill. This farm is making a specialty of scientific egg culture and for this purpose is using the White and Brown Leghorns exclusively. This booklet tells how it is done and the information given therein is well worth obtaining. Send for a copy today and get an idea of how a successful egg farm is conducted. Mention American Poultry Journal.

U. R. Fishel of Hope, Ind., the White Plymouth Rock man, has again demonstrated his originality and good business ability by issuing a special sale list. It is made in a size to go in an ordinary envelope. It has a heavy white double cover of deckle edged paper, and embossed with a tasty design in two colors. The printing and illustrations follow the general design of his large catalogue, each page being set off with a faint blue border. It being printed on a heavy enameled paper, brings out the beautiful half tone illustrations in fine shape.

The printed matter describes the list

of bargains that he offers, each one clearly described, with prices. It also describes his Mammoth Bronze turkeys, fox terriers and Shetland ponies that he has for sale, and gives prices of eggs for hatching.

This will be sent free on request of any American Poultry Journal reader, and describes his new catalogue, which he will send on receipt of 20 cents.

Mr. Fishel is to be congratulated on this fine piece of work.

The recent bulletin of the United States Department of Agriculture shows what enormous losses are sustained each year through the depredations of rats. The average poultry raiser is, no doubt, familiar with this from actual experience. He very likely also appreciates the difficulty of getting rid of these troublesome pests. The usual methods used for their extermination are unsatisfactory to poultry raisers, as they have to be placed where they are not alone dangerous to rodents, but poultry as well.

On this account our readers should thoroughly investigate the rat virus advertised by the Pasteur Vaccine Company in this issue. Their rat virus is harmless to poultry and domestic animals, although it is an efficient and reliable rodent exterminator. They will be pleased to send you full particulars and copies of reports that they are receiving from their satisfied customers. Write them, mentioning this paper.

In this issue we present to our readers a picture of the first prize Single-Comb White Leghorn pen at Madison Square Garden, New York, owned and bred by the Pine Top Poultry Farm, Hartwood, N. Y. Mr. E. E. Winchell, the manager, informs us that they have raised a fine lot of young stock from this pen this season and expect to capture their share of the premiums again at the Madison Square show in December. They also breed Barred Plymouth Rocks of the same high standard of their Leghorns. They now have over 2,000 youngsters with which to please their many customers. If you are looking for something to win with at the early fall and winter shows you should correspond with the Pine Top Poultry Farm, Hartwood, N. Y., and mention American Poultry Journal.

A very enthusiastic Black Orpington admirer and one who breeds the highest quality of stock, is Joe Coleman, Bellville, Ohio, secretary-treasurer of the National Single Comb Black Orpington Club.

His last winter's show record speaks for itself. At Shelby, Ohio, the late T. E. Orr, judge, won cock, first, score 95; cockerel, first, score 96½; hen, first, 95½; pullet, first, 95; breeding pen, first, with the remarkable score of 191¼. At the big American Poultry Association show, Auburn, N. Y., January, 1907, entered four birds, won first and second cockerel, first hen and second pullet and five specials.

Mr. Coleman has 200 youngsters sired by "Nabob," the wonderful cockerel, scoring 96½, by T. E. Orr. Some of his chicks will be standard weight Sept. 1.

Charles Nixon, Washington, N. J., the noted White Wyandotte breeder, reports that he has a grand lot of both old and young stock for sale, both for

show and breeding purposes. As an exhibitor Mr. Nixon has been very successful at both New York and Boston shows, and this year feels sure that he is better equipped than ever before to supply his customers with the kind of birds that will win at the early fall and winter shows. Better write him now if you anticipate securing something choice this fall. Mention American Poultry Journal.

Of all the causes that combine to make poultry raising uncertain, that of lice is the greatest, and to it can be traced the numerous failures of careless and inefficient poultrymen.

The direct result of the ravages of lice is to sap the vigor of the fowls and keep them from producing a profit.

PAROID ROOFING

The only roofing sold on a money back guarantee. We prove superiority to all others. Ask for free sample and book. F. W. BIRD & SON, 13 Mill St., E. Walpole, Mass., 1413 Mounadnock Bldg., Chicago, Ill.

FAIRVIEW FARM CO.
J. S. Haupt, Mgr., Easton, Pa.

This any poultryman knows. Lice also undermine the constitution of fowls and render them liable to the various diseases of the poultry yard.

It has been a standing puzzle to find a powder that would kill the louse the moment it touches, without harming the fowl in the least degree, and the trouble has been that most powders either just numb the lice so that they will still crawl about and revive, or else the powder will injure the fowls while killing the lice. Many powders harm the eyes of fowls and impair their sight.

There has been a new lice powder discovered during this year—1907—that is a marvel of perfection. It is absolutely an instant death to the louse and is perfectly harmless to the birds. It is the perfected result of twelve years' research and incessant trial, and costs no more than the powders that fail to exterminate. It is Conkey's Lice Powder.

In order to convince the poultry fraternity that this long-sought necessity is at last on the market, the manufacturers are taking the whole cost on themselves to let the poultryman make an absolutely free and thorough trial,

"Lasca," first prize S. C. Black Orpington hen at the A. P. A. Show, Auburn, N. Y., January, 1907. Bred and owned by Joe Coleman, Bellville, O.

with a very liberal sample, which will be sent postpaid to any address upon application.

The following method for testing the sample is the surest and best: Take a fowl you know to be lousy and hold it up by the legs. Dust the powder from the package into the feathers, and rub it in, so that it may reach the skin. Be sure and work the powder into the fluffy feathers, especially about the vent. Then stand the bird on a large sheet of white paper and fluff the feathers with the hand. The lice will drop out on to the paper, where you can examine them and find them absolutely dead and without a possible chance of reviving and multiplying. This treatment should be repeated in about a week to kill the nits which may hatch out.

Everyone trying this new powder is enthusiastic over it and all say that it is the greatest article ever discovered for the absolute extermination of lice on poultry. It is also excellent for fleas on dogs, and lice on cattle and other animals. A very liberal sample will be mailed absolutely free and postpaid on application to The G. E. Conkey Company, Cleveland, Ohio.

Warren, Pa.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your ads plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. Sixty thousand per month. We guarantee an average monthly circulation of 60,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

MONEY MAKING

Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. Haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first two weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND

Poultry Foods

take the lead with successful poultry-raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall—it makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected," are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

"White Frost" Strain White Wyandottes

New Jersey's Leading Strain. Our winnings of last year place us in about the front rank, the 41 prizes which our birds captured should cause their offspring of this season to be looked upon with favor. Whites. We have over 700 chicks. They show great quality, and all who are interested in these birds should come and look them over. Our sale of breeders, including a number of last year's prize winners, is now on, and we can furnish pens, trios, single specimens or birds in large quantities that will give satisfaction. Those who come first will have the first choice. Visitors are welcome whether they desire to purchase or not; we are anxious to show our plant. Columbians. We would also be glad to show our Columbian Wyandotte chicks. Buff Cochins Bantams. We have been particularly successful with these birds this season, and have some nice chicks and breeders for sale. We fully expect to add to our list of ribbons in this variety during the coming show season.

CHARLES D. CLEVELAND, Sunny Brook Farm, West Orange, N. J. Member National White Wyandotte Club, American W. Wyandotte Club, Nat'l. Columbian Wyandotte Club

W. R. Wooden, Battle Creek, Mich.

THE OIL THAT'S RIGHT

Is the only kind you should use in your incubators and brooders. Many chicks are killed by the deadly fumes from ill-smelling, gummed-up, smoky lamps.

WYANDOT WHITE OIL

is refined by special process, goes through the wick without clogging and burns with a steady flame preserving even temperature. Write for free circular and price.

THE WYANDOT REFINING CO., Dept. A. Cleveland, O.

WHO IS THE JUDGE?

A sample of many letters received by us:

Dec. 8, 1906. Steinmesch Feed and Poultry Supply Co., St. Louis, Mo.

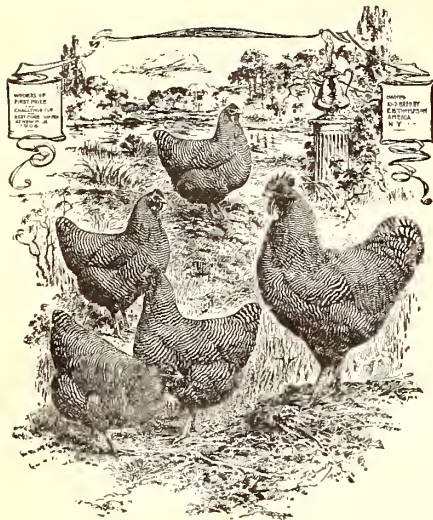

Gentlemen:—I have 200 matured hens and pullets, and yesterday collected six eggs. I have been using gritless feed. It does not produce results, and I will have to go back to the old reliable Steinmesch Select Hen Feed."

STEINMESCH Select Hen Feed

contains grit. It is a balanced ration. It's the best chicken feed that money, brains and experience can put up. It will make hens lay when all other feeds fail to produce results. No cheaper than other feeds, but better. Price \$1.75 per 100 lbs. We pay freight on 200 lbs. everywhere.

Steinmesch's Feed & Poultry Supply Co. 301 Market St., St. Louis, Mo.

Our catalog is free to all. Write for it.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 48 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

S. C. W. Leghorns

Stock and eggs at reduced prices. For sale: 50 fine exhibition hens, 4 yearling cocks. March hatched chicks from exhibition matings that are dandies. Eggs \$1 per 15, \$5 per 100 from exhibition matings. My stock has won the blue ribbons in strongest competition for 7 years. Write for prices to W. L. FERN, ELGIN, ILL.

The Best Trap Nest Made

is the **ACME**, because it does not frighten the hens that use it. Remember that the hens do not have to be COAXED or TRAINED to use the Acme, because all that is required of the hen is to walk into the Acme like she would to use any box or barrel nest. It is simple in construction, easy to operate, safe, roomy and comfortable. It is well ventilated and darkened. It never fails to trap the hen, and the weight of the hen when she enters nest throws the trap. No wires to push against, no tilt board, no springs, no pulleys, no weights to get out of order. Your money back if not as represented. Cat. free.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.
Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Pembroke, Maine.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

OAKES MFG. CO., Box 6, Bloomington, Ind.

DR. O. P. BENNETT

ONCE SAID:

"I do not think an incubator superior to a hen for hatching, but I do think a brooder superior to her for raising chicks." And the **ROOT BROODER** holds the great record of 71 chicks, weighing 91 lbs. in 35 days. Catalogue free.

The ROOT INCUBATOR CO.
CLEVELAND, OHIO

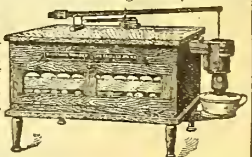

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains. If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

Write at once for further particulars.

THE CYCLE HATCHERY

879 North Leavitt St., Chicago, Illinois

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used for ceiling and siding. It comes to you straight from our own factory.

Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated as shown in illustration, sheets 22x24 inches, \$1.65. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the

interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

We will supply you with a fine ceiling, as traction, all put up at 100 square sheets 24 wide and 6 long. They are excellent. Nothing up an old more than some brick makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building. We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices to these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron pipe and fittings, plumbing supplies, nails, etc.

BRICK SIDING, \$1.95

Guarantee is back of all we sell.

CENTRAL MACHINERY & SUPPLY CO., 549-559 STATE ST., CHICAGO

is not a fall fair! Why not think of this when the credit of a winning is given? The quality of stock must be considered.

Duston's White Wyandottes Win

They more than made good at the Garden, winning best display on points, and other winnings. Look them up—it will pay you. It is another peg that shows that today Duston stock is just as good as when all these years past were making possible the world's best flocks. Send four cents in stamps for catalogue.

Arthur G. Duston :: Box 1020, S. Framingham, Mass.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1½ to 1½ lbs. in seven weeks on it. No science required to feed my system. Are your pullets laying at four to five months' old? If not, you have fed wrong. Failure impossible where my system is used. My 2d edition of 3000 copies, revised and enlarged, now ready. Write today and stop that big feed bill. Circular and testimonials free.

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cnps. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N. Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

Why do we do it? We need the room

One of 150 Colony Houses used on Niagara Farm—fitted with Prairie State Universal Hovers

W. R. CURTISS & CO., Fancy Poultry Twenty Years' Experience In Breeding.

Ransomville, N. Y., June 26, 1907.
PRAIRIE STATE INCUBATOR CO.,
Homer City, Pennsylvania.
Gentlemen: We are using seventy-five (75) of your Incubators, different sizes and different models, and find them perfectly satisfactory in every respect; in fact, we prefer them to any other make of machine on the market. We have one hundred-fifty (150) of your Universal Hovers, and some of your Outdoor Brooders. These machines have all done excellent work for us, and proved perfectly satisfactory. We will hatch 40,000 Ducklings and 35,000 Chickens for this season's work; hatching and brooding are all done in your machines.

Wishing you all the success you deserve in the make and sale of Prairie State Incubators and Brooders, we are Respectfully, **W. R. CURTISS & CO.**
WJC—CJL Per W. J. Curtiss

75,000 ducks and chicks. They have used as many as four hovers in one house, transferring them to other houses after the chicks no longer require them. Messrs. Curtiss further state that during the rush season it was necessary to place in some houses as many as three-hundred chicks, and the greatest loss in any of these instances did not exceed ten chicks. Can you conceive of a more economical and successful manner of rearing chicks? Poultry-raisers are taking their heating apparatus out of other makes of brooders and installing in their place **Prairie State Universal Hovers**. We are at present remodeling brooding houses on large poultry plants, taking out expensive pipe systems that have proven unsuccessful and installing our modern brooding devices. Think of this if you want to raise more chicks next year. Let us plan your brooding system for you now. Do not hesitate because your wants are not great—our systems fit the greatest or smallest plants, and are as profitable for the little fellow as for the big one. Remember, we positively guarantee our Brooding Systems.

PRAIRIE STATE INCUBATOR CO.,
468 Main St., Homer City, Pa.

How 40,000 Ducklings and 35,000 Chickens Were Hatched and Reared

The method of the large poultry-raiser affords an excellent object lesson for those who are in the business on a smaller scale, yet who are anxious to make the most out of their efforts along the same line. What we can learn from the experience of others is usually **clear profit**, because we don't have to pay for the experience, and by following their example we also save much time, money, and disappointment. For this reason the following letter from **W. R. Curtiss & Co.**, who have had twenty years' experience in poultry-raising, ought to furnish some excellent advice on the question of hatching and rearing poultry. During the past season, on their famous Niagara Farm at Ransomville, N. Y., they successfully hatched and raised

Phoenix Poultry Plant, Batavia, Ohio

POULTRY IN THE SOUTH

ON THE LINE OF THE ILLINOIS CENTRAL

The Manufacturer's Record, of Baltimore, Md., is authority for the statement that the poultry products of the South for 1906 reached the enormous sum of \$159,000,000. Of nine leading southern products, with one exception, the poultry crop exceeded them all by several million dollars. The adaptability of the south for the successful raising of poultry for northern winter markets has now been demonstrated, and along the line of the Illinois Central, especially at Hammond, La., flourishing farms are thriving with pleasing results. In Tennessee, Mississippi and Louisiana on the Illinois Central and Yazoo & Mississippi Railroads are natural conditions for poultry raising. The splendid shipping facilities of these roads for reaching important markets, both north and south, should also be considered. For further information, together with illustrated circulars quoting statements from prominent poultry dealers of the south, address the undersigned at Manchester, Iowa.

J. F. MERRY, General Immigration Agent, Room 13, Hive Block.

1000 "RINGY" CHICKS

Snappy colored—deeply, darkly, beautifully blue—and ringy all over. Intensely line-bred from a long line of rich, marvelous Ancestors.

THESE ARE ARISTOCRATS

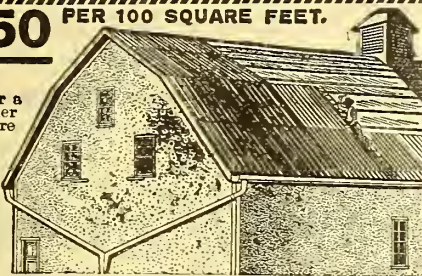

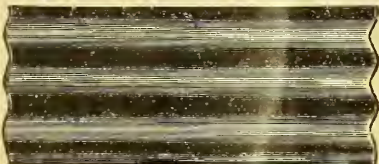

They are superb.—Strong, vigorous, hardy, deep-bodied, full-breasted and magnificent in plumage. Do you want winners? Write me in time. Birds of extraordinary, exquisite, beautiful color are among my young chicks this season. Grand catalog free. Some of my last season's breeders for sale. Write today.

W. D. HOLTERMAN, Fancier, Box A, Fort Wayne, Ind.

CHICAGO HOUSE WRECKING COMPANY, Thirty-Fifth and Iron Sts., CHICAGO.

That Lousy Hen House

Why not get rid of those lice and mites that infest your house and fowls, keep them from laying and in an unhealthy, unnatural condition? You can have a complete, convenient and sanitary hen house. You can have healthy hens, get more and better eggs and save time and labor in your work if you but use Potter sanitary, vermin-proof fixtures. You can have pleasure and profit in poultry raising; not loss and discouragement.

DON'T BUILD

that new hen house or think of fixing up the old one until you have seen our latest and best catalogue. It tells all about the Potter Fixtures; our double vermin-proof and exterminator roosts (sure death to lice and mites); our "Simplex" trap nests; Improved W. P. attachment, etc. It shows fixtures in three styles and twelve different sizes; 64 large pages and over 50 illustrations. It has cost us hundreds of dollars, but we send it free to you for two cents to cover postage. Write today and learn how to save time and labor with this 20th century line of up-to-date hennery fixtures.

NOW'S THE TIME

to learn the Potter System of profitable poultry culture. Hens "dry up" the same as cows. Do you know why and how? Our system teaches you fifteen different ways of making more money on your poultry. Hen selling time is coming, but "DON'T KILL" a laying hen, or sell any hens until you know just their condition.

... THE ... POTTER SYSTEM

teaches you how to pick out every laying hen in your flock. You can keep fewer hens, get more eggs and make more money on your poultry if you know the Potter system. Write today for printed matter and learn what prominent judges, breeders and editors think of our wonderful discovery and its great value to poultrymen.

American Poultry Association Meeting

The largest and most enthusiastic meeting ever held by the Association—Resolved to undertake the work of publishing, one each year, separate breed Standards—Each of the Standards to be illustrated in black and white, and contain also illustrations showing the natural or Standard color and shades of color of the different varieties of the breed—Voted in two hundred and eight new members—Accepted membership of eleven branch Associations—Reelected Hon. Fred L. Kimmey election commissioner—Brought into close touch with the American Poultry Association the various experimental stations and institute workers in the United States and Canada—Organized a bureau of lecturers.

Written by Thomas F. Rigg, Associate Editor American Poultry Journal.

The thirty-second annual convention of the American Poultry Association, held at Niagara Falls, New York, August 13, 14 and 15, was in every respect the most important meeting of the association ever held. At this meeting all branches of the poultry industry were represented. Here were the fanciers, the utility men, the institute and experimental station representatives, manufacturers and publishers. It was a most enthusiastic meeting throughout. It was the first meeting held under the new constitution and it is a self-evident fact that the gentlemen who framed that document builded wisely and well. At this meeting were present three times as many members as attended the St. Louis World's Fair meeting, the meeting which prior to this was the most largely attended meeting ever held by the association. Two hundred and eight names were added to the membership rolls. This is, indeed, a remarkable showing.

It was a meeting full of good cheer and fellowship, at which there was no wrangling and bitter denunciation. The common desire was to do for the American Poultry Association and the great industry which it represents the most good. And a great deal of good was accomplished at this meeting. The American Poultry Association is now a truly representative body and will, we firmly believe, do the work which duty calls upon it to do.

Tuesday, August 13.

Convention called to order by President Grant M. Curtis. City Solicitor Wilson, of Niagara Falls, welcomed the members of the convention to the city.

On motion of Theo. Hewes Ross C. H. Hallock was elected secretary.

A temporary roll call showed there were present fifty-eight members. The average attendance at the annual meetings during the past fifteen years was forty-six.

On motion of H. V. Crawford the rules were suspended for the purpose of allowing Election Commissioner Fred L. Kimmey to make his report.

Mr. Kimmey reported that as a result of the election the following officers were chosen:

President—C. M. Bryant, Wollaston, Mass.

First Vice President—H. V. Crawford, Montclair, N. J.

Second Vice President—Miller Purvis, Peotone, Ill.

Secretary-Treasurer—Ross C. H. Hallock, St. Louis Mo.

Executive Board Members for Three Years—William McNeil, London, Canada; Theo. Hewes, Indianapolis, Ind.; Grant M. Curtis, Buffalo, N. Y.

Executive Board Members for Two Years—George D.

Holden, Owatonna, Minn.; David A. Nicholas, Shelton, Conn.; S. T. Campbell, Mansfield, Ohio.

Executive Board Members for One Year—T. F. McGrew, Washington, D. C.; Reese V. Hicks, Knoxville, Tenn.; George A. Barnes, Battle Creek, Mich.

Mr. Kimmey requested that he be allowed to report as to how the election was conducted.

T. F. McGrew raised point of order and objected.

The chair sustained Mr. McGrew.

Report of election commissioner accepted.

U. R. Fishel moved that the board of review be named and instructed to get busy immediately. The following named gentlemen were appointed on the board: U. R. Fishel, Lester Tompkins, Dr. E. M. Santee, H. P. Rankin, A. L. Nix. U. R. Fishel was chosen chairman and Dr. Santee secretary.

F. L. Sewell gave a chalk talk on "Suggested improvements of and additions to illustrations in American Standard of Perfection, 1910 Edition." Mr. Sewell showed on canvas the early accepted types of the Wyandottes and Barred Rocks. This was an interesting object lesson. He also showed the White Wyandotte type proposed for the 1910 edition of the Standard, as accepted by many prominent breeders and judges.

The next in order was a debate. Resolved, That the next edition of the American Standard of Perfection should contain color-plate illustrations of ideal fowls, male and female.

T. F. McGrew and Thomas F. Rigg, members of the committee to which the question of color plates in the 1910 edition of the Standard was referred by the Auburn meeting, spoke for the affirmative. Arthur C. Smith and H. A. Nourse upheld the negative.

C. M. Bryant, C. H. Latham, Mrs. W. Dawson and H. P. Rankin were appointed judges of debate.

Both sides of the question were ably presented. The judges sustained the negative.

In the general discussion which followed it was seen plainly that a majority of the members present were in favor of color plate illustrations.

In this connection Thomas F. Rigg stated that he was in favor of breed standards, illustrated with color plates.

Adjourned until 8:05 p. m.

Tuesday Evening.

Met pursuant to adjournment, President Curtis presiding.

F. W. Proctor read a paper on color descriptions in next edition of American Standard of Perfection and Glossary of Color Terms. Mr. Proctor showed the absurdity of many

of the color terms now used in the Standard. He made a plea for simplicity and correctness.

W. R. Graham, poultry lecturer and manager of the poultry department of the Ontario Agricultural College, Guelph, Canada, gave an address, illustrated by lantern slides on "What the General and Provincial Governments of Canada Are Doing in Behalf of Poultry Culture."

Professor Graham showed the buildings on the various farms and told of the good work being done by the Canadian and provincial government.

Debate—Question: Resolved, That the American Standard of Perfection gives undue prominence to the beauty value of standard-bred fowls, to the detriment of the utility value of domestic poultry.

Henry Steinmesch and Prof. C. K. Graham spoke for the affirmative, the negative being taken by H. B. Donovan and Theo. Hewes.

This was a very interesting debate, both sides of the question being ably presented. The judges of debate were George H. Northup, Frank Heck, H. V. Crawford, J. C. Fishel, S. T. Campbell, George R. Haswell, and sustained the negative.

Adjourned until Wednesday at 9:30 a. m.

Wednesday Morning.

Roll call showed the attendance to be as follows:

Canada—H. B. Donovan, Prof. W. R. Graham, L. H. Baldwin, Mrs. W. Dawson, Newton Cosh.

Connecticut—C. P. Nettleton, Charles K. Graham, David A. Nichols.

District of Columbia—T. F. McGrew.

Georgia—F. J. Marshall.

Illinois—Frank Heck, Miller Purvis, John Brinkama, Fred L. Kimmey.

Indiana—J. C. Fishel, U. R. Fishel, Theodore Hewes, C. E. Spauld, E. D. Van Gorden, Charles Fishel.

Iowa—Mrs. Harriet Wallace Ashby, Thomas F. Rigg, H. C. Pierce.

Massachusetts—Charles M. Bryant, C. H. Latham, Lester Tompkins, Arthur C. Smith.

Michigan—George S. Barnes, F. L. Sewell.

Minnesota—George B. Holden, H. A. Nourse, A. A. Ziemer.

Missouri—William Miller, Henry Steinmesch, Ross C. H. Hallock.

Nebraska—H. P. Rankin.

Maryland—Buchanan Burr.

New Jersey—H. V. Crawford, Charles D. Cleveland.

New York—J. Y. Bicknell, D. Lincoln Orr, Chet Howell, William McNeil, E. M. Santee, C. C. De Puy, W. R. Curtis, Robert Slocum, M. H. Wright, William F. Brace, T. W. Corey, Henry Trafford, George H. Northup, M. S. Gardner, George H. Gillies, Mark Williams; Robert Seaman, Stauley A. Merkley, W. W. Babcock, George E. Peer, John D. Jaquins, Frank C. Perkins, W. C. Denny, Charles F. Stephenson, Fred W. Proctor, F. E. Dawley, James E. Rice, Fred Maunder, J. H. Drevenstedt, A. O. Schilling, G. S. Felner, Grant M. Curtis, Chas. E. Adair, H. L. Pelton.

Report of committee accepted and approved.

President Curtis delivered his exaugural address as follows:

Since the adjournment of the thirty-first annual convention of this association, held at Auburn, N. Y., January 10-11, current year, considerable progress has been made.

First in order of occurrence was the election by mail. The facts of that election make it plain that voting by mail for officers of the American Poultry Association is a popular success. Facts talk, whereas opinions often are quite tedious.

Out of a total membership of 793 who were believed to be entitled to vote for officers of the association and the time and place of holding the annual meetings, 518 members sent in election ballots that were counted by the election commissioner. Additional to this number about forty ballots were received, but were not counted because of being defective.

It is known that 10 per cent of the names and addresses on the membership list at the time the election ballots were sent out were incorrect or inadequate. Mail under first-class postage sent to these addresses was returned unclaimed. We may safely conclude, therefore, that eleven out of every fourteen members who were given a chance to vote by mail for officers of the association exercised that privilege at the first opportunity.

It is natural that we should compare this result with the old plan of electing officers at our annual meetings. The average attendance of members at the last seven annual meetings at which elections took place was forty-six plus. This means that during a period of seven years—from 1900 to 1906 inclusive—it was left to an average of forty-six members of the association to decide who should be the officers of the organization and have virtually full charge of the management of its affairs. Furthermore, at these annual meetings one-third of the members present and voting were new members. On the first trial of the plan of voting by mail more than eleven times as many members took part in deciding who should represent them officially and be entrusted with the welfare of the association, and a large majority of the total number so voting were old members, as a matter of course.

Branch Organizations.

Next in order has been the initial work done toward the organization of branch associations. When we recall that but seven months have elapsed since the adjournment of Auburn meeting at which the new constitution was adopted authorizing the creation of branch associations; that our late secretary-treasurer was stricken with his last illness soon after the close of that meeting; that as a result of his illness and death practically all work in behalf of the association was at a standstill during February and March; that the printing of the new constitution and by-laws was not completed until in April and that the real work of organizing branch associations was not gotten fairly under way until in the month of May, it must appeal to you that remarkable progress has been made.

What are the facts? Am pleased to be able to report that to date no less than ten branches have made application for membership and in a majority of cases have elected temporary officers, these branches bearing names as follows:

New York State Branch.

Mid-West Branch.

North-Western Branch.

Ontario Branch.

Ohio State Branch.

South-Central Branch.

Connecticut State Branch.

South-West Branch.

Massachusetts Branch.

Washington Branch.

Our constitution provides that, "Any state or province, or any district composed of any combination of adjoining states or provinces, not exceeding six in number, may be organized into a branch association, subject to the constitution and by-laws and the rules and regulations of the American Poultry Association.

The important question of the apportionment of territory among the branches is left in control of the executive board. The above named branches, if not disturbed as to territory, will have jurisdiction over and may draw members from twenty-four states, one province and one territory. In other words, branch organizations covering more than one-half of the total population of the United States and Canada, have been effected thus far, regardless of untoward conditions, notable among which was the death of our secretary-treas-

HOUSTAN PULLET.

Bred and owned by Rev. C. E. Petersen, Pembroke, Me.

urer and the unseasonable time of year for special activity among poultrymen.

Pardon me for injecting here my opinion that next to the preparation, publication and improvement of the American Standard of Perfection the organization of branch associations is the most important step taken by this association since the date of its inception, a third of a century ago. In a letter written by me May 31, as president of the association to a member-elect of the new executive board for use in creating interest in branch organization, appeared these words:

"Localization of all present and future benefits of the American Poultry Association, on the basis of actual membership, is the chief object of branch organization. By means of branch associations we shall be able to understand better the local conditions and thus can get in closer touch with poultrymen and poultry interests throughout the United States and Canada. It follows logically that if the work at hand is well done locally, and the entire field is well organized, we shall awake some fine morning to learn that our great task is well-nigh completed; that through organization, through united effort, the American Poultry Association and its affiliated members will be in a

position to promote and apply the proposed benefits to an extent scarcely thought of today."

Increased Membership.

It will be conceded that new members are what we want and that we cannot have too many of them, provided they are of the right kind. We should feel much encouraged by what has been accomplished in this direction during the last one hundred days. At this meeting we have received 203 applications for membership. This number represents three times as many as ever before were presented at a meeting of the organization.

During the last seven years the average number of new applicants for membership at annual and adjourned meetings has been forty, excluding this meeting from the count, of which number an average of twenty-eight were life and an average of twelve were annual members. All applications to be acted upon at this meeting are for life. This showing will not be regarded as a poor one when we take into account the fact that it was made during harvest and vacation days, at a period when there are no poultry shows and when poultry enthusiasm is supposed to be at low tide. Your president, one hundred days ago, ventured the opinion that by the close of this meeting we would have added two hundred new members to our list. Today he predicts with even a greater degree of confidence that by the end of the show season of 1907-1908 we shall have doubled our membership of one hundred days ago. Let us set that achievement as our goal and be satisfied with nothing short of it.

Cost of Membership.

A few words regarding the cost of membership. Doubtless some persons feel that the present membership fee is too high. Unquestionably if the fee were \$1 or \$2 or \$5 we could secure a larger list than by asking \$10. If mere members were all that is wanted, then a \$1 or \$2 fee would be in order. But it was said of old, and the same vital truth holds good today, that where a man's treasure is, there his heart will be also. Personally I strongly favor the \$10 life fee; first, because we should make a membership in this association well worth that sum to every person in the United States and Canada who is engaged in making money from the breeding, exhibition and sale of standard poultry, or from any branch of the poultry industry that is more or less dependent upon the welfare and promotion of the standard-bred interest, and it will cost money to do this; second, we want enough of every new member's "treasure" paid into the association to insure his putting "heart" as well into the work of the organization. In other words, it is not members alone that we require for the work in hand, but the right kind of members—earnest, active, zealous men and women who will value their membership and gladly do their part toward the upbuilding of this association and the promotion of the great and growing industry that it is seeking to represent.

What can readily be done in the way of securing new members has been demonstrated recently in the province of Ontario, in Tennessee, Kentucky, Georgia, Alabama, Florida and Mississippi, representing the proposed South-Central branch, and in Missouri, Kansas, Arkansas, Oklahoma, Indian territory and Texas, representing the territory of the proposed South-West Branch. I mention these cases as examples without in any way discrediting the valuable and loyal work done elsewhere to date.

One hundred days ago we had but fifteen members—fourteen life and one annual—in all of Canada, with its eight millions of inhabitants, its thousands of poultry keepers and its hundreds of genuine fanciers. At this meeting twenty-eight applications for membership from the one province of Ontario have been presented, a gain of more than 150 per cent.

One hundred days ago we had sixteen members in the five states it is proposed to include in the South-Central branch. Applications are now before you for the admission of seventeen new members, from this heretofore non-responsive territory, a gain of over 100 per cent. Of the seventeen new applicants presented at this meeting eleven are from Tennessee. One hundred days ago we had but three members all told in the state of Tennessee, with its more than two and one-quarter million of inhabitants, which plainly shows what two or three earnest workers can do in a single state.

One hundred days ago we had forty-four members in the five states it is proposed to include in the South-West Branch. Thus far at this meeting our executive board has been asked to act favorably upon 48 new applications for membership from these five states and one territory, another increase of more than 100 per cent. As before stated, facts talk!

If increased membership means increased prestige, increased influence and greater opportunity and power for doing good work in behalf of poultry culture, then it would appear that we are on the right track.

Amendments to Constitution.

A few words of caution about making amendments to our so-called new Constitution. No doubt this document will need amendment from time to time, but when you come to undertake this it is highly important that you consider, with all possible care, the significance and probable effect of such amendments. Persons have criticized our Constitution in my hearing who have admitted frankly that they had read only parts of it. Let us bear in mind that twelve earnest and capable members of this body spent eight days of continuous, wearisome labor in considering and formulating our present fundamental law, not alone in its separate parts, but as a whole—as a working organism that would give us a live organization, an association capable of self-support, of a rapid and healthy growth and possessed of power to bestow real and tangible benefits upon its several classes of membership. I commend to you a careful reading and rereading of this document—embodying as it does the highly important and far-reaching work this association has now set itself to accomplish.

In order that I may get into the records my best judgment, as your retiring president, outlining the general plan I believe you should follow in promoting further the work now well under way, I ask your indulgence for quoting the concluding paragraphs of the circular letter before mentioned:

"Our new Constitution, while we regard it as a substantial advance on past efforts, is but a foundation upon which to erect a superstructure, the value and permanency of which should be not only monumental to the earnest men and women who today are entrusted with the work, but that sooner or later will adequately represent a truly great and rapidly developing industry that already is a chief source of national wealth and a day-by-day blessing to all civilized mankind.

"Lastly and frankly, I am convinced that without branch organizations, without thus localizing the work and benefits of the American Poultry Association, the case is practically hopeless. I believe that in no other way can the American Poultry Association, or any similar organization, achieve the very desirable objects naturally sought by an association of poultrymen. The great work at hand, in order that it may be done properly and with a fair chance of success, simply demands organized effort, and this effort must be localized, together with the benefits, in order that we may reach life-giving, legitimate self-interest. In other words, to win and deserve success we must plan something really useful—we must do something actually worth while.

"It is clear that the general plan of this organized effort should be much like the form of popular government now existing in the United States and Canada, where broad domains are divided into states and provinces, these into counties and the counties into towns or townships. Then local representation, on equal terms, in the general governing body, with the maximum practical legislative authority left to the local organizations, as regards all local matters, will do the rest.

"To a person familiar with representative, popular government, such as exists today in the United States and Canada, I need say no more. The American Poultry Association, so it seems to me, has laid a solid foundation for a large and properly influential organization and it is to be hoped that five to ten thousand men and women now actively engaged in different branches of poultry culture and its allied interests will soon join in "the new movement," doing so because they feel that by this means they can help improve conditions in the poultry world and thereby benefit themselves as well as others. If this is brought about within the next two or three years, I believe results can then be obtained that will very materially benefit the poultry industry in all branches and every worthy person engaged therein."

I believe it is proper that I should refrain, at this time, from expressing opinions on the several important matters that are to come before you at this meeting for legislative action. From my position in the ranks I shall be pleased to render the best service I can. In concluding this address, I wish to thank, very earnestly, all those who have taken an active part in the work that has been done during my term of office as president. To each and every one of you I extend my hearty and grateful personal thanks. Without your valued assistance comparatively little could have been accomplished.

So much for my feelings in the matter. Of much greater importance, fellow members, is the thanks due these willing workers not alone from the American Poultry Association, but also from poultrymen and poultry women generally. If I were to try to mention those who are richly deserving of the thanks of this organization, I should find myself naming all who are present here today and many others who would have been here had it been convenient for them to come. Let my last words as retiring president be used in framing a request that you give the incoming president and his official assistants your loyal support, your earnest, aggressive help, first to last.

Acting Secretary-Treasurer Grant M. Curtis submitted his report, as follows:

Cash on hand August 14, 1907.....	\$9,529.01
Obligations	1,425.41
	\$8,103.60

The report of the Board of Review was presented and accepted. This report told of the hard, faithful and good work done by Election Commissioner Kimmey and found the result of the election to be in accordance with Mr. Kimmey's report.

Geo. H. Burgott asked if the original ballots were in the hands of the committee.

President Curtis replied that the original ballots were in the hands of the Executive Committee and could be inspected by any member in the lawful and prescribed manner.

Mr. H. V. Crawford tendered his resignation as first vice-president. Mr. Crawford said that under the existing peculiar conditions, well understood by all members, the office of first vice-president properly belonged to H. B. Donovan.

Miller Purvis raised the point of order that as the convention was acting under suspension of rules for a specified purpose the motion to accept Mr. Crawford's resignation was not in order.

T. F. McGrew thought the matter of the resignation of Mr. Crawford should be sent to the Executive Board.

On motion of H. B. Donovan the rules were suspended to receive the resignation of Mr. Crawford.

Mr. Crawford tendered his resignation as first vice-president.

Arthur Smith held that Mr. Donovan was not eligible to the office as he was president of the Ontario branch association.

President Curtis replied that he had received the resignation of Wm. McNeil as a member of the Executive Board. What seemed to Mr. Curtis to be the best way out of the dilemma was to accept Mr. Crawford's resignation and that of Mr. McNeil. Then let the Executive Board elect Mr. Donovan first vice-president and Mr. Crawford member of the Executive Board, thus securing the services of these three able and hard-working members. The resignation of Mr. Crawford was accepted, as was that of Mr. McNeil, and the Executive Board later acted in accordance with the suggestion of President Curtis.

Adjourned until 2 p. m.

Wednesday Afternoon.

Met pursuant to adjournment, President Curtis presiding. President Curtis stated that it was now in order that he should vacate the chair, his term of office having closed. He thanked all members for the support given him during the past year and a half and predicted that ere long the association would be composed of practically all the poultry breeders and fanciers of America. He called to the chair President C. M. Bryant.

Upon request of President Bryant Mr. Curtis remained in the chair until all old business was disposed of.

The report of the committee on proposed Standard for judging dressed poultry and market eggs was presented by Henry Trafford, chairman. The committee advocated the publication of a book of about 100 pages, showing what dressed poultry should be, how eggs should be shipped and a whole lot of other things new and startling and very curious. It was evident long before Mr. Trafford had closed his report and the reading of a long list of letters that the members of the association were opposed to the plan.

Report received.

Adjourned until 8:15 p. m.

Wednesday Evening.

The following program was followed during the evening session:

Paper—What the United States Government has done, is doing and now proposes to do for the benefit of the poultry industry.

Robt. R. Slocum, Washington, D. C., Poultry Assistant, United States Department of Agriculture, Bureau of Animal Industry.

Questions and Discussion.

Paper—Work and opportunities of American Poultry Association Bureau of Lecturers.

Hon. F. E. Dawley, Fayetteville, N. Y., Director Bureau of Farmers' Institutes for State of New York.

Questions and Discussion.

Address—Character and value of work being done in behalf of poultry culture at Agricultural Colleges and Experiment Stations in the United States. Illustrated by lantern slides.

James E. Rice, Ithaca, N. Y., Assistant Professor of Poultry Husbandry, New York Agricultural College.

Adjourned until Thursday morning at 9:30.

Thursday Morning.

Met pursuant to adjournment. Chairman Curtis called President Bryant to the chair. President Bryant said he had no inaugural address to deliver at this time. At the expiration of his term of office he hoped to be able to report that the association had made much progress. "It is deeds, not words, that count," said Mr. Bryant.

The report of the committee on the proposed standard for dressed poultry and market eggs was taken up.

T. F. McGrew thought such a book should be printed. He would guarantee the sale of 5,000 copies. Henry Steinmesch, Charles McClave, M. S. Gardner and several others thought

S. C. BROWN LEGHORN.

Scored 95½ by Warnock. Owned by A. E. Banta, Wheatland, Iowa.

this was a proposition which the American Poultry Association should turn down.

The matter was referred to the Executive Board.

The committee appointed at the Auburn meeting on the advisability of using color plates in the 1910 edition of the Standard reported as follows:

Your committee after careful consideration reports that it is expedient and advisable to illustrate the next edition of the Standard, to be issued in 1910, with illustrations in natural color.

Fred L. Kimmey,
T. F. McGrew,
Thos. F. Rigg.

On motion of Charles McClave the report was accepted.

The following motion was made by Grant M. Curtis and seconded by J. H. Drevenstedt:

That this association undertake the publication of separate breed Standards, i. e., of separately bound Standards of Perfection for the Plymouth Rocks, the Wyandottes, the Leghorns, etc., beginning with the breed that is most popular in the United States and Canada at the present time and taking up other breeds one at a time, in the order of their popularity.

That each of these Standards shall be complete in itself as regards everything the purchaser and user should receive in the form of a Standard for determining the individual and comparative merits of standard fowl, including an appropriate introduction telling of the origin and work of the American Poultry Association and citing the history of the breed and of each variety thereof, containing a nomencla-

ture fowl and a suitable glossary, which shall define the technical terms used in the text of the book, an official score card, a list of the general disqualifications applicable to the breed, a list of special defects, with prescribed discounts, the usual instructions to judges, so far as they apply to the breed, also quite full general remarks treating of breed characteristics and the beauty and utility values of the varieties of the breed.

That each of these breed Standards shall be illustrated in black and white, to the best advantage, and shall also contain illustrations showing the natural or standard colors and shades of color of the different varieties of the breed, these colored illustrations to consist, so far as may be found practicable, of separate ideal pictures of a standard shaped male and female of each variety, said pictures to be shown in full profile, and in the event that it is not found practicable or satisfactory to show the complete specimens in color, then sample feathers shall be shown and should these be found impracticable, then patches of color illustrating the correct shades, as per Standard requirements, shall be used.

That each of these breed Standards, which treat of the so-called utility or semi-utility varieties, shall contain text and illustrations descriptive of the standard size, standard shape and the standard color for eggs laid by the breed and the varieties thereof; also text and illustrations descriptive of standard requirements, as regards shape, color of skin, etc., for dressed specimens, together with sample forms of score cards to be used in judging eggs and dressed fowl of the breed and of each variety thereof.

That the method of deciding on the popularity of breeds shall be as follows: The secretaries of all poultry shows held in the United States and Canada, between the dates October 31, 1907, and March 1, 1908, shall be invited by the secretary-treasurer of the American Poultry Association to furnish him, in his official capacity, a certified list of the number of entries of each breed shown at the respective exhibitions for which the regular entry fees shall have been paid and on April 1, 1908, these lists shall be footed up and the breed that was exhibited in the largest number, at the shows thus reported on, all standard varieties of each breed to count, shall be supplied first in order with a separate breed Standard as herein outlined and ordered; and that during the winter show season of 1908-1909, the same method shall be followed in deciding upon the popularity of the second breed to be supplied with a separate Standard, and so on year by year until such number of breeds have been supplied as may be deemed advisable by this association, said separate Standards not to be undertaken at a rate of more than one each year.

That the method of preparing and revising the text and illustrations of each of these breed Standards shall be as follows: If specialty clubs representing the breed, or any variety thereof, are in active existence and are members of the American Poultry Association, each such club shall be invited to delegate a member to serve on a revision committee, the work of which committee shall be to prepare, for submission to the Executive Board of this Association, the text and illustrations it is proposed shall comprise a separate breed Standard, and the Association, by action of its Executive Board, shall appoint a sufficient number of its members who are not members of any of said specialty clubs, to give the Association a majority of one on said committee, provided that if two specialty clubs exist for the same variety, the club having the largest bonafide membership at the time of formation of the committee shall be entitled to appoint the club delegate for such variety to serve on the revision committee for the breed.

That the report of each revision committee on separate Standards shall be made to the Executive Board of this association, the final report of each such committee to be made to the association by the chairman or secretary of the Executive Board.

That the expenses of each revision committee on separate breed Standards shall be borne by the American Poultry Association and the specialty club on a prorata basis of membership of each such committee, said expenses to include traveling and hotel expenses to regularly called meetings of each committee and only such other expenses as are found necessary in carrying out the provisions of this resolution and the instructions of the Executive Board, all such expenses to be approved by the Finance Committee of this association.

That the preparation and publication of these separate breed Standards shall not forestall nor interfere with the work of properly revising the text and illustrations of the present Standard of Perfection, as provided in our Constitution and as ordered at the thirty-first annual convention of this association.

In support of his motion Mr. Curtis said that it was expected of the American Poultry Association to do something for its members. He could state as a fact that at the present time 75 to 90 per cent of the members of the association are in favor of color-plate illustrations in the Standard. Prolonged cheers followed this statement.

Arthur Smith said he did not want to go against what appeared to be the unanimous desire of the convention for fear of being mobbed. But he did not want to see the color work in the Standard narrowed down too fine. He wanted breeders to have a little leeway at least. The folly of the color fad was shown in the near-destruction of exhibition Brown Leghorns a few years ago. If the motion by Mr. Curtis could be thus modified he would support it.

George D. Holden said as this was to be an experiment he favored but one breed book at a time and for the present.

Theo. Hewes was of the opinion that the committee when assembled could do the work on two or three or four of the breed books and thus save expense.

M. S. Gardner feared that it would be a detriment to Barred Rock breeders.

H. P. Rankin thought it would be best to have a variation of color as we find in Barred Rocks.

President Bryant vacated the chair to take the floor for the purpose of advocating the proposed plan.

Professor Rice said reasonable men will not expect a bird to reach perfection. This book would be the means of leading men to the ideal, however.

T. F. McGrew said breeders would continue to breed good birds and get as near to the ideal as possible.

The motion prevailed and the matter was referred to the Executive Board.

A paper on outline of plan of co-operation between General Association and Branch Associations, with form of charter for use of Branches, by Fred L. Kimmey, was read and referred to the Executive Board.

The report of the committee on educational statistics was presented and read by Chairman Rice. Accepted and referred to Executive Board.

Adjourned until 2:30 p. m.

Thursday Afternoon.

Met pursuant to adjournment. President Bryant presiding.

On motion a telegram of good cheer and fellowship was sent to Philander Williams, J. Y. Bicknell and I. K. Felch, members of the association who were present at the birth of the association in Buffalo in 1874.

D. Lincoln Orr moved that the secretary be instructed to collect a complete file of the published proceedings of all meetings held by the American Poultry Association, these to be kept in the office of the secretary. Carried.

On motion of Dr. Burr, seconded by every man and woman in the room, a vote of thanks was given Grant M. Curtis for the large amount of good work performed by him as president of the association.

Theo. Hewes, in accordance with the notice properly given, moved to strike from article 4, section 3, of the Constitution these words:

"Neither the Vice-Presidents nor any two members of the Executive Board shall be elected from the same State or Province."

The proposed amendment was adopted.

Mr. Hewes further said:

Article VI, Section 13, now reads: "The Secretary-Treasurer shall devote his entire time and attention to the duties of his office, and the same shall be required of his office assistant."

I move to change this to read:

"The Secretary-Treasurer shall devote such time to the business of the Association as that office requires. He shall personally open and answer all letters directed to him as Secretary-Treasurer and perform such other duties as are required, and in no way allow his private affairs to interfere with the business of the Association."

This proposed amendment was defeated there being but two votes in the negative.

The amendment proposed by Fred L. Kimmey upon request was next taken up.

Amend Section 39, Article VI, to read:

"Duties of the Election Commissioner.—On the first Tuesday of February of each year the Election Commissioner shall mail to the last known address of every member of the Association a printed nominating ballot blank, to be so designated, naming the officers to be elected and specifying the territory from which each is eligible; the nominating ballots to be made returnable within thirty days and each bal-

lot to be dated and signed by the member whose vote it represents."

Amend Section 41 to read:

"On receiving authority to formally announce the various successful nominees the Election Commissioner shall within thirty days of the counting of the nominating ballots mail printed election ballots, to be so designated, to all members of the Association, making them returnable within 30 days. The names and residences of all candidates to be voted for shall be printed on the ballot and at the beginning of each line on which the name of a candidate is printed a square shall be printed. The ballot shall contain full instructions for the guidance of voters as to the manner of marking them and the territorial eligibility of the candidates."

These proposed amendments were adopted after the recommendations of the Board of Review had been incorporated therein. These recommendations were that each ballot be numbered; that each voter (member of the Association) be given a recorded number; that the voter's ballot number must accord with his registered number.

Amend Section 45 to read:

"The opening, counting and recording of election ballots shall take place at a specified place and hour, which place and hour shall be announced by the Election Commissioner on the printed ballot blanks and ballots mailed to each member and each candidate shall have the right to be present in person or by an accredited representative to witness the opening, counting and recording of all ballots. Each candidate, or his representative, shall be furnished a report of the number of all votes cast as opened, counted and recorded, but no other information shall be furnished. If one or more candidates should not be represented at the time and place specified this shall not postpone or delay the opening, counting and recording of the votes as thus provided for."

A letter written by Mr. Kimmey to Grant M. Curtis was read. In this letter Mr. Kimmey stated that in his opinion it was better to bear the troubles caused by publicity than to run the risk of it being held that a man's vote was not counted as cast.

The Board of Review recommended that hereafter no information as to how any member of the Association has voted shall be given to a candidate or candidates or otherwise be made public. The purposed amendment thus amended was adopted.

The Executive Board reported that judges' licenses be issued to the following named persons:

Philauder Williams, J. Y. Bicknell, I. K. Felch, Charles McClave, William McNeil, S. Butterfield, David A. Nichols, T. F. McGrew, George D. Holden, Theo. Hewes, Thomas F. Rigg, W. S. Russell, F. H. Shellabarger, C. H. Rhodes, H. H. Collier, Henry Berrar, J. C. Williams, L. N. Cobbledick, W. W. Browning, F. W. Hitchcock, F. J. Marshall, Loring Brown, S. T. Lee, J. S. Jeffrey, A. F. Pierce, E. G. Roberts, A. C. Hawkins, T. W. Southard, D. J. Lambert, O. P. Greer, P. W. Corey, W. S. Ellison, George O. Brown, H. S. Ball, T. L. Bane, Charles S. Greene, Newton Cosh, W. R. Graham, C. E. Howell, F. W. Taylor, W. J. Stanton, Frank Heck, L. O. McCord, A. J. Kummer, Elmer Dixon, Ben S. Myers, Frank L. Shaw, G. R. Haswell, George H. Burgott, H. J. Quilhot, F. B. Zimmer, Henry Trafford, A. O. Schilling, H. P. Schwab, Wm. F. Brace, George W. Webb, C. E. Rockenstyn, Halstead Scudder, S. T. Campbell, Miller Purvis, Reese V. Hicks, W. Theo. Wittman, W. H. Card, F. W. Traviss, W. C. Denny, M. S. Gardner, H. B. Savage, M. F. Delano, Charles E. Cram, J. F. Crangle, S. B. Lane, J. J. Atherton, J. H. Drevenstedt, Charles V. Keeler, Eugene Sites, H. A. Emmel, D. P. Shove, D. T. Heimlich, W. H. H. Jones, Adam Thompson, W. R. Graves, D. M. Oliver, George H. Northup, A. B. Shaner, D. E. Hale, R. E. Jones, Ira C. Keller, B. W. Mosher, C. A. Emry, W. W. Babcock, J. D. Jaquins, J. A. Tucker, W. E. Stanfield, E. C. Branch, T. M. Campbell, W. W. Zike, C. Ott, J. H. McCracken, E. W. Rankin, U. R. Fishel, Richard Oke, George Purdue, J. E. Bennett, T. F. Rackham, J. S. Mertens, H. B. Donovan, John Dudley, J. C. Gault, B. J. Hill, George Ewald, Thomas S. Faulkner, M. M. Barger, Phil Feil, F. C. Shepard.

Also that judges' licenses be issued as follows:

H. P. Rankin—Rocks and Wyandottes.
Frank McKenzie—French Class.
O. J. Easton—American Class.
John Hettick—Asiatic and Orpington Class.
Joe Coleman—Orpingtons.
George S. Barues—Buff Leghorns, Wyandottes, Plymouth Rocks.
C. S. Byers—Orpingtons.
S. B. Johnson—Water fowls, turkeys.

M. Holmes—Golden and Silver Seabright, Buff Plymouth Rocks.

F. J. Shanklin—Asiatics.

F. C. Sites—Plymouth Rocks, Wyandottes, Games, Game Bantams, water fowl.

Clarence W. King—Water fowl and turkeys.

Robert Seaman—Rhode Island Reds.

W. W. Babcock—White Leghorns.

C. E. Howell—Brown Leghorns.

Clyde Proper—Bantams.

R. Story—Minorcas.

Dr. N. B. Aldrich—Rhode Island Reds.

Lester Tompkins—Rhode Island Reds.

C. H. Latham—Plymouth Rocks and Wyandottes.

Report accepted and approved.

Announcement was made that the Executive Board had passed the following resolution:

That we offer one grand prize silver medal to all local associations who are members of the American Poultry Association for the best cockerel in the American, Asiatic, Mediterranean and English classes; also diplomas for best male under one year old in all Standard varieties.

The Executive Board appointed the following committees for the year:

Standard Revision—Grant M. Curtis, Theo. Hewes, Wm. McNeil.

The Corno Cup, given for the largest and best display of any one variety of poultry at the Jamestown Exposition Poultry Show, 1907. Presented by the Corno Mills Company, East St. Louis, Ill.

Medals and Diplomas—T. F. McGrew, S. T. Campbell, Ross C. H. Hallock.

Finance—C. M. Bryant, David Nichols, George D. Holden.

A committee to devise design for an Association button and badge was appointed (continued) as follows: Franklin L. Sewell, Thos. F. Rigg, T. M. Condon.

Grant M. Curtis, who had previously given notice that Fred L. Kimmey had been called home by the death of his granddaughter, moved that a committee be appointed to draft a resolution of sympathy for Mr. Kimmey and his family. Mr. Curtis proposed this same committee frame the proper resolution upon the great loss sustained by the death of T. E. Orr. Carried.

On motion of H. V. Crawford the resolution was adopted unanimously, it being ordered that the secretary convey to Mrs. Orr a copy of same, and that a page in the printed report of this meeting be reserved for this resolution.

On motion the secretary was instructed to cast the entire vote of the Association for Fred L. Kimmey for Election Commissioner.

Adjourned sine die.

Announcements.

The Executive Board will meet in Cleveland, Ohio, during the first week of November.

A committee has been appointed to name a bureau of

lecturers whose work shall be under the auspices of the American Poultry Association.

Thursday evening a most delightful banquet was held at the Clifton Hotel, Niagara Falls, Canada, 150 plates being laid.

Toastmaster—Col. C. M. Bryant, President A. P. A., Wollaston, Mass.

Address of Welcome—Hon. Robert Slater, mayor of Niagara Falls, Ontario.

"Anything"—Grant M. Curtis, Buffalo, N. Y., Ex-President A. P. A.

"Science"—Prof. W. H. Day, Guelph, Ont., Canada.

"Reminiscences"—Hon. Fred L. Kimmey, Chicago, Ill.

"The Imaginary Line"—L. H. Baldwin, Deer Park, Ont., Canada.

"The Ladies"—Miller Purvis, Peotone, Ill.

"The South"—Reese V. Hicks, Madisonville, Tenn.

"Iowa and the West"—Thos. F. Rigg, Iowa Falls, Ia., President Mid-West Branch.

"Use and Abuse of the Score-Card"—W. R. Craig, Pittsburg, Pa.

"A Look Backward—Mt. Clemens"—Geo. D. Holden, Owatonna, Minn., President Northwest Branch.

"A Soft Answer Turneth Away Wrath"—Mayor H. V. Crawford, Montclair, N. J., Secretary New York Poultry, Pigeon and Pet Stock Association.

"A Review of the Banquet"—Theo. Hewes, America.

size and design to enable this board to offer annually a grand prize for the best cockerel in a group to be composed of the American, Asiatic, Mediterranean and English breeds; a silver medal as a special prize for the best cockerel in each variety of the above described group and a diploma as a special prize on the best male bird less than one year old in all varieties of such breeds of standard fowl as are not named herein; provided that these American Poultry Association grand and special prizes shall be offered only at poultry shows held in branch territory by associations that are associate members of the American Poultry Association; that but one grand prize and set of specials may be offered in a single branch territory during one year; that such prizes shall not be offered two years in succession, at the same show, where branch territory consists of one state or province and where branch territory consists of two or more states and provinces, said prizes shall be offered first in one state or province and then in a different state or province until they have been offered consecutively in every state or province comprised in such branch territory; that in order to obtain the grand prizes and specials herein provided for the branch organization desiring same must have twenty-five members and the membership of said branch must have been increased during the preceding twelve months not less than ten members; that said grand prizes and specials shall be offered only at such shows as invite the American Poultry Association to be represented of-

Cockerel house, pigeon loft and flyway on Pine Top Poultry Farm, Hartwood, N. Y.

"Justice—by a Judge"—Hon. D. A. Nichols, Shelton, Conn.

"The New Judges"—Mayor Geo. R. Haswell, Circleville, Ohio.

"A Serious Talk"—Wm. McNeil, London, Ont., Canada.

Short talks were also made by Henry Steinmesch, Henry Trafford, T. F. McGrew, George S. Barnes, D. Lincoln Orr, C. A. Cyphers, George L. Leech, R. L. Slocum, Ross C. H. Hallock, S. T. Campbell and Wm. Miller.

Mrs. W. J. Denny, of Rochester, N. Y., and Miss Minnie C. Isler, J. Y. Bicknell and G. H. Gillies of Buffalo, comprised the reception committee.

A copy of the following telegram was sent to Philander Williams, Taunton, Mass.; J. Y. Bicknell, Buffalo, N. Y.; I. K. Felch, Natick Mass.:

"Association rising vote one hundred present wishes new members enrolled.

"Secretary American Poultry Association."

On motion of Grant M. Curtis the following telegram was sent to Fred L. Kimmey:

"Re-elected commissioner. Association by rising vote extends earnest sympathy you and yours.

"Secretary American Poultry Association."

The executive board adopted the following resolution: That this board authorizes its committee on medals and diplomas to obtain prices on a grand prize gold medal, which medal shall contain not to exceed \$20 worth of gold; also on a sufficient number of silver medals of appropriate

size and design to enable this board to offer annually a grand prize for the best cockerel in a group to be composed of the American, Asiatic, Mediterranean and English breeds; a silver medal as a special prize for the best cockerel in each variety of the above described group and a diploma as a special prize on the best male bird less than one year old in all varieties of such breeds of standard fowl as are not named herein; provided that these American Poultry Association grand and special prizes shall be offered only at poultry shows held in branch territory by associations that are associate members of the American Poultry Association; that but one grand prize and set of specials may be offered in a single branch territory during one year; that such prizes shall not be offered two years in succession, at the same show, where branch territory consists of one state or province and where branch territory consists of two or more states and provinces, said prizes shall be offered first in one state or province and then in a different state or province until they have been offered consecutively in every state or province comprised in such branch territory; that in order to obtain the grand prizes and specials herein provided for the branch organization desiring same must have twenty-five members and the membership of said branch must have been increased during the preceding twelve months not less than ten members; that said grand prizes and specials shall be offered only at such shows as invite the American Poultry Association to be represented of-

Branch Associations.

List of Branch Associations of the A. P. A. to whom charters were granted:

Connecticut State Branch—F. O. Groesbeck, secretary, Hartford, Conn.

Ontario Branch—H. B. Donovan, secretary, Toronto, Ont.

Ohio State Branch—Charles E. Cram, secretary, Carey, Ohio.

Massachusetts State Branch—A. C. Smith, secretary, Waltham, Mass.

South-West Branch, comprising states of Missouri, Kansas, Oklahoma, Texas, Arkansas and Louisiana—C. A. Morton, secretary, St. Louis, Mo.

South Central Branch, comprising states of Kentucky, Tennessee, Georgia, Florida, Alabama and Mississippi—John A. Murkin, Jr., secretary, Nashville, Tenn.

Mid-West Branch, comprising states of Illinois, Indiana, Iowa, Wisconsin and Michigan—Fred L. Kimmey, secretary, Chicago, Ill.

North-West Branch, comprising states of Minnesota, Nebraska, Montana, North and South Dakota—Ralph Whitney, secretary, Stewartville, Minn.

New York State Branch—James E. Rice, secretary, Ithaca, N. Y.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded R. H. Crosby, Markham, Ont., Canada., and the second prize to E. E. Whitney, Ann Arbor, Mich.

PREPARING BIRDS FOR THE SHOW.

The show season is now here and the poultryman is busy getting his birds into show shape. Perhaps a few hints along this line will be of some use to some amateur exhibitor. There are two chief points in preparing a bird for the show room—first, quietness, and, second, cleanliness.

By quietness is meant birds that are easily handled and will not be scared nearly to death when in a coop. The fancier can train his birds for the show just as a horse is trained for a race. Starting, say, a month before the show, the birds that are to be exhibited should be handled as much as possible, so as to get them good and tame. If the show specimens are placed in a coop at night and fed in the morning before letting them out they will soon become used to the coop. While shut up they should be taken out of the coop and handled just as a judge would handle them at the show. A short cane should be kept handy and the birds taught to pose when touched with it. If this treatment is kept up your birds will show up far better than your neighbors' birds that have not had such good preparation.

While your birds are showing themselves off to the best advantage, your friends' untrained birds are huddled up in the far end of the coop and are afraid to stand up for inspection. Thus it will be seen that much is to be gained by training your birds for the show, for even if your birds are not quite as good as the other fellow's your specimens will show up far better than the other party's scared-to-death birds. Every one who has ever visited a show knows that the above is perfectly true, and while some birds were looking their best some others would be found huddled up in the back end of the coop.

In the second place your birds must be clean from beak to toe, and most birds are the better for a good washing. Of course, if your birds are not white and the plumage looks good and clean, then it is not advisable to wash them unless you understand the job from start to finish, for the writer remembers the muss he made of the first birds he attempted to wash. But most all white birds are the better for a thorough washing. To successfully wash a bird you will want three tubs. In tub No. 1 place clear warm water; in the second, warm water with a quantity of soap dissolved in it and made into suds, and tub No. 3, containing warm water with a little bluing added. An assistant is necessary, for one person cannot manage alone very well. Now bring in your birds (you should borrow the kitchen for the job) and provide a light coop for them. Catch a bird and while your assistant holds it in the water of tub No. 1 you should thoroughly wet all the feathers. Be sure and have all the plumage well soaked. Now squeeze out as much water as you can and then place in tub No. 2. And now the real work commences. Take a bunch of feathers in one hand and thoroughly wash them with the other. Don't be afraid of hurting the feathers, for a wet feather will stand a lot of rubbing. A toothbrush should be used to clean the legs and feet, being sure to get all the dirt out of the cracks and corners. The water should be pressed out of the feathers as much as possible, and the bird is now put in tub No. 1 again and all the soapy water rinsed out of the plumage. Now place your bird in the third tub, and be sure and get the blue water thoroughly into the feathers. Press out as nearly dry as possible and give the bird a toss up into the air to get the feathers loosened up and then place in the coop to dry. Be sure you get the head and feet perfectly clean. Before sending or taking your birds to the show rub up their legs with a soft cloth to which a little vaseline has been applied. The comb and the wattles should be treated in the same manner. If you don't wash the plumage be sure

and clean head and feet, for a bird with dirty legs and feet is not a nice specimen for a judge to handle, and he will give the preference to the clean bird every time. In conclusion I wish to say that I trust these few lines will be of some use to some new hand at the game, and in closing I may say that if the exhibitor has to supply the coops be sure and have a nice, clean, attractive coop.

Markham, Ont., Canada.

R. H. Crosby.

DOLLAR "ROOSTERS."

The owner of the average farm flock will seldom pay more than \$1 for a male bird for breeding purposes, it matters not whether it is November or March. If he or she cannot make an exchange with a neighbor they usually get along with a bird of their own raising rather than pay much more than the market price of live chickens for a really good bird for breeding.

At the suggestion of \$2 for a bird they look at the poultryman as though he were some swindler endeavoring to sell them stock in a far-away silver mine. If he only asks them to look at his flock and suggests that it would pay them to

First prize Barred Plymouth Rock hen at Cincinnati, Ohio, 1906. Bred and owned by C. E. Spaugh, Rugby, Ind.

buy a setting or two of eggs to improve their flock, they begin to back away. They suddenly remember that other business demands their attention and they must go.

Such people seldom read a poultry journal, so do not think this is written for the purpose of showing to any one his failings. We wish only to consider how best to deal with such people. In fact, we can hardly expect to deal with them at all. If they come seeking for stock we should set a price on our birds which we believe is all they are worth and no more. Then they may take or leave alone. It does not pay to spend much time in arguing the value of a bird with one who does not read or study about hens. They want the best, but they do not realize what it has cost in money, time and study to produce the best.

Some will say: "Why, you never can sell all your surplus stock at such fancy prices. You will finally have to take whatever the butcher will give, so why not sell cheaper and make more money in the end?" Then the breeder should say: "Very well, if I cannot get reasonable pay for raising them I will give it up. But I am confident that my stock is worth all I ask for it to any one who will use it right, who will try to breed up a nice flock and care for it decently. Of course, if you want a male bird simply to put in with a lot of scrubs and mongrels and then the next year use males from any other breed that happens to be handy it will not pay you. Anything will do."

No more "dollar roosters" for me and no more "roosters" which are fit for breeders for a dollar from my flock after November 1. I have made some mistakes along this line,

but I intend to do better in the future. I would suggest a schedule of prices which might help to sell cockerels before time to arrange winter quarters for them. It is about as follows: In September, \$1; in October, \$1.25; from November 1 to 20, \$1.50; from November 20 to March 1, \$2. That is for cockerels worth keeping for breeders. For better ones charge accordingly. With this plan those who want cockerels at a low price can get them. These prices in autumn would be better for the breeder than to sell for the prices usually obtained when the breeding season arrives.

Every bird kept into winter should be growing in value or else yielding an income. The pullet which begins to lay in November or December, if well bred, is worth \$1, and has not consumed as much feed as a cockerel of the same age. Where an equal number of pullets and cockerels are raised there may not be one really desirable cockerel to three or four choice pullets. There is no profit on the remaining cockerels. They must go for meat. The breeding cockerels should be sold at prices to insure a reasonable profit on the whole lot.

Every poultryman who sells fowls or eggs for breeding should try to make the purchaser realize that he or she is securing not only the birds paid for, but the benefit of years of study and experience, for which they pay only a small advance above the cost of ordinary fowls.

Ann Arbor, Mich.

E. E. Whitney.

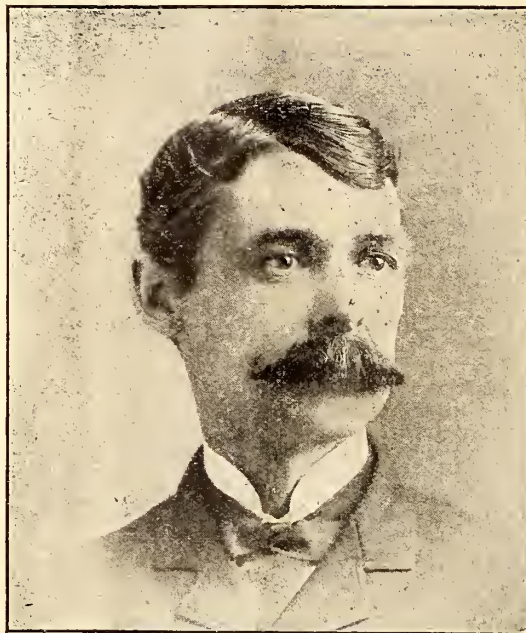

NEXT WINTER'S EXHIBITION BIRDS.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Me.

It is too late to prepare your winning birds for exhibition a week or so before the exhibition occurs, or perhaps I should have said, the birds might have won, if the right care and consideration had been given them much earlier in the season and so for that reason, if it has not already been done, begin now; and first of all, separate every promising bird from the rest of the flock and bestow upon these few birds your best efforts, so that when the season opens they

say here that after a bird has got its plumage dirty and badly sullied before maturity, if a white bird, all the washing you can give it, will never put on the newness and scintillous life of a naturally well-preserved plumage where Nature itself has been the successful operator.

I do not mean to say that a final washing will not be

J. B. HOWE, KENTLAND, IND., WHITE ROCK SPECIALIST.

Commenced breeding poultry in 1878, taking up one breed after another until one time he bred thirty varieties of land and water fowls. During the many years he has been engaged in the poultry business he has shipped poultry and eggs for hatching purposes to every state and territory in the United States, also to Canada and foreign countries; but of late years he has discarded all varieties but the famous White Plymouth Rocks, America's best general purpose fowl, and is making a specialty of this one grand breed.

necessary; but that all the washing you will finally give the bird will not restore to its plumage the lost splendor, if while putting on its mature feathers these have been badly dirtied up.

It is, of course, needless to say that the cockerels and the pullets must be separated if best results are to be obtained; all the pullets can run together, but wherever it can be done when the cockerel gets to be four months old it will be better prepared for exhibition if given a run for itself with plenty of grass and shade, if possible of the kind of shade already advocated.

Where this cannot be done, a careful watch must be kept, so that no fighting among themselves will occur, as a single scrap of that kind may ruin for good the most promising bird in the lot.

Therefore if any of them be quarrelsome, separate such birds from the rest, or put among them an old cock-bird with lots of grit and he will keep order, as he will not allow any fighting on the premises. Care should be taken to place the roost in the house in such a way that it is not possible for the cockerels to damage their tail by rubbing it against the back wall of the house.

Another precaution as far as the house is concerned, is to keep a lot of clean straw on the floor, and, of course, to keep the house neat and clean at all times.

One of the best means to keep the feet in good color is to let the birds out early in the morning, several hours before the dew is off the grass. It is nature's own preventive for a number of ills, and among them, for the fading out of the color in the yellow-leg varieties in particular, though in every other variety it helps to keep the fresh, glossy look of the leg intact.

Some breeders do not advocate any roost till the birds get to be three or four months old, but this is a mistake where the breeding of exhibition birds is an object of some magnitude, for if the breastbone is not bred right it will not stay right, roost or no roost, as it will crook by the bird's own weight, which we have proven to our own satisfaction a good many times over.

Then, again, where a number of the large-combed chickens are allowed to crowd together it will be detrimental to the perfect development of the comb, as we never had the

HOUDAN COCKEREL.

First at Boston both as cockerel and cock. Bred and owned by C. E. Petersen, Pembroke, Me.

will be as near perfect in feather and condition as you can make them.

After having separated these birds from the flock, give them a yard to themselves, where they will have plenty shade, and if possible where there are a lot of low bushes and shrubs, as there is nothing better to give the desired brilliance to the plumage and to keep it clean, and I may

slightest doubt in our own mind, that a good many crooked combs were not derived from the parent stock, but from letting chickens eight and ten weeks old run with the hen, and in crowding under her, with combs half an inch high, the weight of the hen's body will force the comb over, and where a number of young birds are crowded together in a small coop the heat will force their combs out of all proportion to standard requirements. There is as much to be looked after in the caring of the young stock bred for exhibition purposes as there is in the mating and breeding for the same purpose.

Give much attention to the slow-growing cockerels, those ungainly, unshapely youngsters that do not seem to promise much, for these very birds will more than likely produce your next winter's winners.

It is the "cocky" youngsters that are no good; the bird that has a comb as big as his crow when six weeks old, and all the style and shape of an old bird when his legs are three inches from the ground. He is immense to look at, but he is no good, so fling him out.

And while we are on this subject of early maturity, too early for a proper development of all parts, I may give you warning to refrain from giving any stimulating food to the pullets selected for exhibition development in feather, size, style and finish, for a pullet that begins to lay when quite young never makes a fine bird for exhibition.

Keep her growing and shaping out till she gets her full size and if then she is ready to lay just before wanted for exhibition she is in the best of condition and will show off all her youthful charms to the best advantage and capture the judge by her good looks.

The pullet that has been laying months before the show is "henney," and has lost the bloom of her plumage and nothing can put it on again.

Good, sound, hard grain and a little oily matter to help force the pigments into the plumage, plenty of shade when growing it, for otherwise a white bird will not be white and a black bird will not be black and a buff bird will not be buff, for when exposed to the rays of a too strong sun, the white will turn to gold and the black to a reddish brown and the buff will fade into a mealy yellow.

If a good dead glossy white, a fine beetle-green black, and a rich deep buff is the desired feature to be obtained, then provide plenty of shade when the plumage is forming.

At the time of selection of the young birds supposed to be fit subjects for future show honors, go carefully over the bird's plumage and pick out all awry and broken feathers, and if dry at the quill no harm will be done, and the bird will not suffer.

It has been stated that where a soft feather is plucked out of a black bird, that the chances are it will come out again white, but I do not believe that this is a fact, though I shall not dispute it, but I have seen birds pick one another till they bled, and the feathers would come out all correct in color at the next growth. Yet we will not say that under some conditions an injury of the flesh from which the feather was pulled might cause a white feather to come out in an otherwise black-plumaged bird, same as sometimes occurs when a cut on a person's head heals, gray hair will cover the scar.

Make all your birds fearless at the approach of human beings, and this can only be done by establishing confidence in the birds toward you.

Pick them up at every chance, just a minute or less, then drop them, then when they get used to being handled call them to you, make them pose for you. I have cockerels that will stand up straight and let me put them into any pose I want to, and sometimes they will add a crow or two

to the pose, for after a while they seem to like it and will be only too willing to be handled.

But what a difference in style and attitude it makes when such a bird is cooped in the show room; he will stand boldly upright in the front of his coop, court the attention of the lookers on, and when the judge comes to handle him, there is no kicking or squawking, and as soon as he is out of the judge's hand he is up again to the front, more than likely with a crow of defiance or of confidence in humanity; anyhow, the judge likes a bird of this kind, and generally tickles him under the bill again to make him pose, looks backward again to the coop while leaving him, sometimes comes back again for another look, marks his card and feels satisfied that whoever bred this bird knew how to prepare it for exhibition.

In contrast to the bird mentioned, look at the one next to him; crowding into all four corners of the coop in turn, scarcely able to keep his legs under him, afraid of the approach of anybody, plumage badly crumpled, and no possible way of finding out anything about his carriage or shape, and kicking and struggling in the hands of the judge, crying bloody murder. Well, he is generally flung back into the coop and that ends it; but many an otherwise good bird has lost the day by this timidity which his owner could easily have overcome if he had handled the bird in time.

Condition is by no means everything in a show-bird, but it is a great deal, and all his other qualities cannot be shown off to advantage without it.

Lots of birds at our large shows have sold themselves, while with others all the talking by their owners never would have done so, though perhaps they were better birds, but they lacked the style and the finish that comes to a bird trained to show off his good qualities to best advantage. But in your admiration for the stately cockerels and sprightly pullets let me advise you to remember the old birds from which they came, and that if these birds are supposed to come home from the shows of next season laurel-crowned they, too, need your closest attention at this time.

The cock-birds should have practically the same care as the young cockerels and after their exclusion from the breeding pen given a good liberal bill of fare, as they will need it to build up their system.

The females should also be attended to and be kept scrupulously clean, as a bird cannot molt out a good plumage if hampered with lice, which generally is the sole cause for what is termed "hanging in the molt."

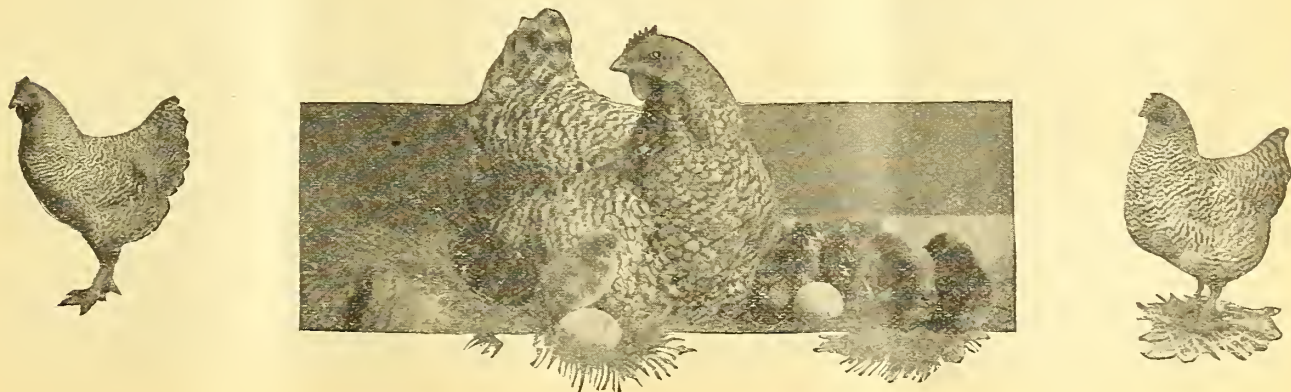

A slow-molting bird seldom gets into good feather. It is the bird that molts easily and rapidly that comes out in fine plumage, and simply because it shows that her general health and condition is good and such constitution helps the natural process of the annual molt.

Be particularly careful about the legs, examine frequently, for it is at this time of the season the scaly mites get in their work, and once badly affected the damage is done for good.

Sweep up daily the old feathers shed. They are a fruitful source of increasing the winter lice supply. The nits on them will hatch as well off the hen as on her at this time of the season.

Provide plenty of good food, and plenty of cool, clean water. They have earned your best attention by doing their best for you; now you do your best for them. They will appreciate it and will pay you back next winter when the show season opens for all the attention you gave them.

And it may help out matters by telling you that very few breeders this season got out very many early birds, so look out well for your old birds; they will be your next season's breeders if you don't want to go backward in the production of exhibition birds.

AMERICAN POULTRY JOURNAL

Issued the first of each month.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

American Poultry Association Meeting.

The thirty-second annual convention of the American Poultry Association, held at Niagara Falls, August 13-15, was, in many respects, the most important meeting of the association ever held. In the way of attendance this meeting was a record-breaker. More than three times as many new names were placed on the membership roll at Niagara Falls as were ever before recorded at a meeting of the association. These recruits come from nearly every state in the Union and province in Canada. We have no longer reason to doubt whether or not the new constitution is acceptable to the breeders of the United States and Canada. It has succeeded in bringing together all those interested in the production of fowls—the marketmen and the fanciers. At this meeting representatives of these two departments of the poultry business found interest and benefit

in every feature of the program. This of itself is enough to justify the claim made by the friends of the new constitution.

The new machinery worked smoothly. There was no hitch or friction. So well did everything work that there was no indication that the association was working under a heretofore untried plan of procedure.

By far the most important legislation enacted was that in regard to issuing breed Standards, illustrated with color plates in natural or Standard colors of fowls shown. This action was taken for the purpose of meeting the wants of at least 90 per cent of the fanciers and breeders of America. In each breed Standard all varieties of the breed will be shown, as with the Wyandotte the eight varieties will be properly cared for in one book.

The American Poultry Association is now a representative body. It is now organized in the interest of all breeders and fanciers. It is going to fill the field of its legitimate endeavor full to overflowing.

After Many Years.

The fact that the American Poultry Association at its annual meeting last month resolved to issue an illustrated Standard, fowls to be shown in natural or Standard colors, must be especially gratifying to Fred L. Kimmey. Those acquainted with the affairs of the association know that Fred L. Kimmey was the pioneer in the work having for its object an illustrated Standard. He talked it and argued it years before he could get even an audience in a meeting of the association. Time after time the proposition was turned down. Yet each time the movement was strengthened. Mr. Kimmey continued to work. Few men in all America have the ability to so clearly, forcibly and pleasingly present an argument to a body of men as has Fred L. Kimmey. As a result the American Poultry Association voted to issue an illustrated Standard. Mr. Kimmey contended for one containing color plates. Again he was in advance of the times, and a majority of the association ruled that the illustrations be made in black and white. Now the association votes to do what Mr. Kimmey said it should do, implored it to do, more than seven years ago. There ought to be something very pleasing in all this to Fred L. Kimmey.

Exhibition Stock Scarce.

The demand for exhibition stock this season is bound to far exceed the supply. The spring season the country over was a very unfavorable one, and in nearly all localities the summer has not been such that stock could be properly grown. In this connection the Stock-Keeper, Boston, Mass., says:

"The East is being thoroughly searched for early show birds by wide-awake exhibitors. But early birds are mighty scarce and where there are any, the owners feel reluctant to part with them as a rule, believing prices will go higher as the weeks roll on. The Jamestown Exposition show the end of October, several important shows in November followed in the middle of December by the Madison Square Garden exhibition will put well-matured show specimens at a premium. Many

exhibitors will have to depend on their old birds to make a good showing next fall, and the old winners are receiving more attention than is usual this season of the year."

Conditions are a trifle better in the West than they are in the East, and the East will take, at greatly increased prices, all the good show stock the West can supply. The fortunate few, scattered here and there over the country, are going to reap a rich reward this fall and early winter.

The American Poultry Journal, the pioneer in color plate printing of fowls, congratulates the American Poultry Association upon its resolution to show fowls in the Standard as Standard fowls appear in life.

President Bryant promptly and successfully met the first attempt to pull down the flag and violate the constitution. It is a safe prediction that no such attempt will again be made during President Bryant's term of office—at least not by the fellows who know the president.

The American Poultry Association at Niagara Falls read the handwriting on the wall, and voted to issue breed Standards.

We await the criticism of John H. Robinson.

The price of corn, oats and all feeds will rule high for the next twelve months. The breeders who have learned to economize on feed, to get the largest amount of good out of foodstuffs, will be doubly repaid.

Put it down as a fact that the next revision of the Standard of Perfection will not be "a fight between two editors" to the detriment of the Standard and the men who buy and use it. William McNeil will be there.

The American Poultry Association and the National Butchers' Association met in adjoining rooms at Niagara Falls. It was common remark that Henry Trafford read his report on a standard for dressed poultry to the wrong set of men.

But little politics was talked at Niagara Falls. The most heard was about a ticket with a Western man for president and a New York man for secretary-treasurer.

First Annual Summer Picnic of the American Poultry Association for the Officers and Members.

With Apologies to Life.

Written for A. P. J. by D. Lincoln Orr.

The American Poultry Association's first summer picnic took place last week. The weather was threatening at first but the Rev. Ross C. H. Hallock offered a prayer, and it rapidly cleared off, a charming day being the net result.

It was decided to have the picnic at Niagara Falls and camp out on the beautiful grounds overlooking the falls. The program was carried out faithfully.

Mr. Grant M. Curtis managed all the details with great ability. He deserves the thanks of all. During almost the whole time he was the life of the entire party.

An invitation had been extended not only to the association members but also to all those whom the association had benefited in times past. This made a large attendance. Among those present were John H. Robinson, A. F. Hunter and others too numerous to mention.

Mr. Grant M. Curtis also had charge of the hampers. The lemon pies he handed out were the best ever, and the ice cream cold storage standards were much admired. Several indeed tried to take them home but they melted away too quickly.

H. V. Crawford and Wm. McNeil ran a bag race for resignation stakes. McNeil reached the goal first but the prize was awarded to Crawford. Crawford did not want the prize but he watched the judges closely till the award was posted, then he took French leave, not wishing to add any more expense to the already soaked treasury. Fred L. Kimmey shocked the members by handing his resignation in as he had just received a very flattering offer from the election bureau of the New York life insurance companies. He was re-elected, however, without any audible opposition although Thomas F. Rigg, Geo. E. Peer and Grant M. Curtis were unknown candidates. Lester Tomkins was there and when he had anything to say everything was as still as night. Georgie Burgott and Lillian Russell ran the potato race for the consolation stakes. They were disappointed, however, in the extreme. Just as the second lap was about finished they discovered another in the field. They lost, being handicapped by over weight. Hallock won the race. Among the also rans were Russell and Burgott. Russell has not been heard from since and Burgott went over the falls and is now in the whirlpool going round and round. Geo. Hewes pretty close to the line now. Break away, George!

One of the most exciting contests of the outing was a grand game of football, J. H. Robinson vs. All America. It was hotly contested for the first half and it would have ended in a complete rout for the victor had not Referee Purvis decided in favor of Robinson who finally won by a score of 23 to 0.

The feature of the game was the magnificent center rushes of Robinson and his brilliant knowledge of the game "kicking."

Owing to the roughness and harshness of the game it was promptly decided to have no more. The Hon. Dave Nichols had been appointed chief of police. Through oversight he left his badge off and went in behind the white and red for a shave to the tune of 75 cents. Isn't it funny how easily a hayseed can be spotted, and funnier yet how easily it is to separate him from his coin. David was hungry Thursday evening, so he sneaked the banquet and went to his hotel for something to eat. The Nutmeg State has smart men in some ways. One of the long advertised events did not come off, the 4-ounce glove bout between Schureman and McReynolds. Many were disappointed and as the referee announced he had received word that inasmuch as

both contestants had not been in training long enough they were not in condition, rain checks were handed out. We hope this event will be a leading feature next year. Donovan climbed the greased pole. A receipted bill to this and the next picnic was at the top.

President Bryant gave a spectacular exhibition of Thomas Brackett Reed, once famous as speaker of the House of Representatives. It was very unkind of him to assert by his actions and words that he had opinions of his own; it was simply disgusting, and I felt that at one time his decision would be appealed from but several who had no business to butt in also expressed their opinions and somehow (owing to the great applause that the Butchers' Association was giving Trafford on account of his masterly essay regarding fat stock) I lost track, but the appeal was withdrawn and in a mild way a soft resolution was resolved. It's hard for one to jump at the crack of the whip when they like to crack the whip themselves.

I could not afford a ticket for the side show but they tell me it was very pleasant and everything was just lovely. Prof. Rice's words may be true. And, dear me, I must not forget Professors Rice and Graham had charge of the kindergarten, ably assisted by Deacon Sewell, who with his chalk drew sketches that were pleasing, especially to the butchers.

This is a fat steer. One cruel member made the remark. "If Prof. Rice only spoke as well at the meeting as he did at the banquet I could listen to him all evening and away into the night." Two hundred new members paid admission to see the sights next year and help pay the expenses of the magnates.

One of the side attractions was the 15-cent standard booth in charge of McGrew, having been given that honor by the once President Curtis.

Understudy Schilling was there taking a few lessons on poultry sketching and incidentally on being a good boy. There isn't much difference between a shilling and a franc. See?

The only Drev was there, bless his dear soul! He was not so much in evidence, eh? But, my, his ammunition was used all along the firing line. Meeting called to order Tuesday a. m. The Stockkeeper had the news of the first day's session to its readers Saturday. A regular Hearst reporter, only no faking. Drevstedt is a candidate for president next year, so I'm told. Has entered in the long distance running race if he can borrow Trafford's lungs.

Eugene Sites returned to the ballroom after dinner and took the president's chair; looked around proud as a peacock, rapped the table, and with a smile that would make the Horse-shoe falls look insignificant, said: "I'm chairman; come to order, please."

You're all right, Sites, but it might make some of the members nervous.

There were many interesting features not on the published list and I would advise those who like picnics, circuses and wild west shows to buy a life ticket.

I understand the site chosen for the picnic next year is at the same place and those who intend to take in the banquet to bring their lunch along.

In the meantime the present picnic

**EASY
TO
USE
QUICK
ACTION**

That's what you want when you have vermin and lice in your poultry pens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultry pens, on stock, or bugs from vines.

Lewiston, Me. Apr. 19. 05.
Mr. D. J. Lambert, Apponaug, R. I.
Dear Sir:

There are plenty of other kinds "just as good", but I want the "old Reliable"

(Signed) JOHN S. HYDE.

100 oz. \$1. Sample 10c.

The safest and most certain louse killer made. Ask for booklet. Sold by all dealers.

was a great success. All were home for Sunday morning prayers, somewhat tired, but as ever jolly and satisfied with their outing and themselves.

From the great divide there came a voice, "Remember, boys, you're making history."

DUCKS—EASY TO RAISE—QUICK RETURNS.

Very little is written in the poultry journals about duck culture by those who breed them extensively. As a rule they are too busy or don't care to have others know what they have learned by hard experience.

I have more inquiries as to raising them than I do on all other lines in the poultry industry. By following a few simple rules a person can raise to maturity almost every duck hatched every year and that by a beginner.

They require less brooder heat, for a much shorter period, than chickens and take only about half as long to reach broiler size, making four pounds in eight weeks. I am speaking of Pekin ducks. Are not subject to diseases, not having lice, cholera, roup nor gapes.

To make them grow fast and mature into fine big birds, sometimes even reaching ten and twelve pounds, they should be fed a mixed ground feed consisting of one part beef meal, two parts corn meal and one part of barley feed, like bran or clover meal, with 5 per cent coarse sand mixed in it. This I feed quite wet, even making it into a slop in hot weather.

It will surprise you how they will live and grow, also what a quantity of this feed they will get outside of. But don't get scared, the more they eat the sooner they will be large enough to market. It doesn't take a bit more feed to make a pound of duck than chicken, and if hatched in March and April will bring from 18 to 22 cents per pound in Chicago up to about the middle of June.

I have known a large number of persons try to raise them by stinting them in feeding. They require very little feed when grown up to the time when you wish them to begin laying, provided they have range with ponds to run to. The laying stock, in fact, is much better off if fed sparingly from July 1 to January 1. They will begin to lay sooner, live better, and the eggs are more fertile. The laying stock should be fed same as growing ducks except the sand. Oyster shell should be kept by them.

A person wanting several matings to run in same pasture can mate up the pens by penning up the ones you want mated in a small pen so they can be housed in the house you want them to lay in for a couple of weeks and you can hardly drive the flocks together during the laying season. This mating should be done about February 1, using one drake to seven ducks in large flocks and one to five in small flocks.

I keep about fifty ducks in each flock. The house don't need to be anything fancy nor need it be very tight, but should be kept dry with plenty of good bedding so eggs will keep as clean as possible.

For nests I place ten foot boards about one foot from sides of building, so ducks can get in and out at both ends. Keep the bedding deep

MILK CANS ROB YOU

Look through a microscope at milk set to cream in pans or cans and you'll see how they rob you. You'll see the caseine—the cheese part—forming a spider web all through the milk. You'll see this web growing thicker and thicker until it forms solid curd. How can you expect all the cream to rise through that? It can't. This

caseine web catches a third to half the cream. You stand that loss just as long as you use pans or cans for they haven't enough skimming force to take out all the cream. But, just the minute you commence using Sharples Dairy Tubular Cream Separator, you stop that loss.

Sharples Dairy Tubular Cream Separators have 10,000 times more skimming force than pans or cans, and twice as much as any other separator. They get all the cream—get it quick—get it free from dirt and in the best condition for making Gilt Edge Butter. Caseine don't bother the Tubular. The Tubular is positively certain to greatly increase your dairy profits, so write at once for catalog I-205 and our valuable free book, "Business Dairying."

back of these boards and when you go to gather the eggs you cannot see a sign of one until you begin digging in the straw.

Ducks can be made to lay by the middle of January, and after a week or two will almost lay an egg a day till the middle of June. Keep them shut up until 7 or 8 o'clock in the morning and they will have mostly done laying.

Duck eggs need more air in incubator and most people use some moisture under them after the sixteenth day.

The green duck business has become very popular in the west in the last few years and the Long Island men are shipping their iced ducks into Chicago. These might just as well be raised in this vicinity as not, as ducks for broilers are just as well off without water to swim in.

Taking everything into consideration ducks don't have as many drawbacks and discouragements as other lines of poultry.

One more word as to exhibiting ducks. Don't use soap on them, as it takes all the oil out and gives them a dull brown color. Just give them a clean pond of water and let them do the work, or if you don't have that just use fresh water. They are very nervous and should not be caught up till as late as possible before sending to show. Osear Wells.

Fariua, Ill.

A New Paper for Fanciers.

The first number of the Poultry Fancier will make its appearance September 15. It will be published at 357 Dearborn street, Chicago, under the business and editorial management of Frank Heck. The new paper will be an entirely separate and distinct publication from Successful Poultry Journal, also published by Mr. Heck. It will be devoted entirely to the fancy side of the poultry industry, and, therefore, ought to prove of value to all fanciers. Fancy Fowls, published at Hopkinsville, Ky., for the past ten years, has been secured as a foundation for the Poultry Fancier, the subscription list and the entire business of the former being taken over by the new enterprise.

TWENTY YEARS' EXPERIENCE RAISING POULTRY.

When a man has devoted practically all of his adult life to doing one thing, it certainly stands to reason that he would become thoroughly posted and expert in that line.

Mr. Henry Steinmesch, president of the Steinmesch Feed & Poultry Supply Company, St. Louis, Mo., has been raising poultry for over twenty years, and the result of this practical experience has qualified him in many ways to produce the finest results. He states that he has come to the conclusion that there is more in feed than breed as regards the profitable outcome of those who raise poultry.

For this reason he has given a great deal of time and thought to the selection and preparation of chick and poultry feeds. His unusual success in his own poultry yards led him to start the manufacturing of poultry feeds several years ago, and the growth of this company's business has been phenomenal from the beginning. This can only be attributed to the fact that Mr. Steinmesch knows from long, practical experience how to make chick and poultry

feeds that give unusual satisfaction. The fact that the leading poultrymen of this country are feeding Steinmesch feeds is another good evidence that they are of exceptional merit.

Elsewhere in this issue will be found their advertisement, and it will pay our readers to look it up.

This company handles a full line of feeds and poultry supplies and will be glad to mail one of their handsome catalogs free to any who write for it. They also pay the freight on orders of 200 pounds or more. When writing please mention this paper.

"Petersen's Houdans" is such a well established strain, and breeds so uniform in color, size and shape, and with such a wonderful crest development, that it is known the world over. It holds two championships and has won more medals, silver cups and blue ribbons than all other exhibitors competing, and at the Nation's Great Shows and in the strongest competition, no chance winnings, but a continuous record covering many years. Mr. Petersen is the acknowledged authority on the Houdan fowl in this country, and the first one who has written an authoritative treatise on the breeding and management of the Houdan fowl. Address Rev. C. E. Petersen, Pembroke, Maine.

More Than Her Own Weight in Eggs Every Month

Such big egg production can only be had when the hen is in good condition—strong, healthy and properly fed. To insure a willingness to lay regularly, you must supply the proper feed but more than enough to just sustain life. The yield of eggs from a hen properly and sufficiently fed is only limited by the capabilities of the individual bird, *but in order to reach that limit*, whatever it may be, use

CORNO HEN FEED

It has been proven to contain the proper variety of grain, containing sufficient nitrogenous matter, and if fed in conjunction with the usual grit will insure the best results at all times. We don't ask you to buy "Corno Hen Feed" on faith, we want you to see it—then you'll buy it.

WE WANT TO PUT A SAMPLE

right into your own hands so that you can examine it—see how clean it is—and note the goodness of the grain it's made of.

All you have to do to get this sample is to drop us a postal giving us your name and address and that of your dealer.

If your dealer doesn't sell Corno Hen Feed, we will quote a price on any quantity delivered at your nearest railroad station.

THE CORNO MILLS COMPANY
900 Baugh Avenue East St. Louis, Ill.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Editor American Poultry Journal.

Dear Sir: Kindly answer these questions in your next issue, and oblige: (1) Are black feathers on the R. C. R. I. Reds a disqualification? (2) What is the best way of preserving eggs for winter? (3) How many nests do you think would be necessary for about 25 laying hens and about how high from the floor? How high would the roosts have to be from floor? Do you think if about five or six pullets were with one cockerel for breeding that all the eggs ought to be fertile? (4) How long would two different breeds have to be separated to get best results for hatching? (5) Are ashes good for hens to dust themselves in? (6) How large a place should be necessary to keep eight or ten pullets and one cockerel? (7) How long could you keep eggs for hatching before setting them? (8) At what age should R. I. Red pullets begin laying? O. P.

Greenville, Me.

Answer.—(1) The color of wings in R. I. Red, male, should be: Primaries, lower web, black; upper web, red. Secondaries, lower web, red; upper web, black. Flight-coverts, black; wing-bows, free from black. Those of the female practically the same. All information of this character is contained in American Standard of Perfection, price of which is \$1.50. (2) Water glass is now considered the best way of preserving eggs. See advertisements in this issue. (3) You

should have at least twelve nests for 25 hens, located from 8 to 12 inches from the floor. For medium heavy birds such as R. I. Reds the roosts should be 18 to 20 inches from the floor. At least 95 per cent of all eggs should be fertile where five or six pullets and one male are kept together. (4) From ten days to two weeks. (5) Coal ashes is all right for fowls to dust in but wood ashes spoil their plumage. (6) A building containing 100 square feet will be large enough for eight or ten pullets and a cockerel. (7) From two to three weeks. (8) From five to eight months.

Editor American Poultry Journal.

Dear Sir: As a subscriber I would like to ask the following question. I am breeding White Wyandottes and one of my hens seems very healthy, comb red and she lays right along, but every few minutes she sneezes, just about the same as poultry with a cold. Please give remedy. H. M. W.

Genoa, Ohio.

Answer.—Your hen has probably got a slight cold and by giving her a little lard and kerosene oil and rubbing some of the mixture on her head and throat she will probably be relieved in a short time.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following: (1) Is it necessary to have

laying house double boarded on roof or sides when house is absolutely tight on roof and three sides? The house is 12x24 feet, divided into four pens 6x12 feet, with glass window in each alternate window, balance muslin; windows, 2 ft. 6 in. by 2 ft. 8 in., 2½ feet from floor, 4 feet from roof. Is this house built right for our climate; if not, perhaps you could suggest a better one? (2) Why do the poultry journals advocate hemlock in preference to other lumber for poultry houses? J. R.

Auoka, Minn.

Answer.—(1) No. We do not see where your house could be improved upon. (2) We do not know why poultry journals advocate hemlock to other lumber unless that some people claim that mites and lice will not thrive so well where hemlock is used.

Editor American Poultry Journal.

Dear Sir: Would like to ask a few questions. Please answer in your September issue: (1) Is there any danger of eggs spoiling before six months when using water glass? (2) Can water glass be bought at drug stores? (3) Does it make any difference what the eggs are put in for keeping, as long as it is water tight? (4) Will a common beer keg be all right? H. C. F.

Houghton, Mich.

Answer.—(1) Not if they are strictly fresh when put in water glass. (2) All druggists do not keep water glass but they can easily procure it for you. (3) Stone crocks are the best to use. (4) Common beer kegs can be used but they must be thoroughly scalded and cleaned before the water glass is put in them.

Editor American Poultry Journal.

Dear Sir: Please tell briefly how I can build up a strain of Orpingtons which will produce stock good enough for show purposes? (2) What is meant by

You Ought to Get More Eggs

And You Can Save Feed Bills

EVERY atom that hens use in making eggs, comes from the food they eat. They can't get it anywhere else. That being true, you must, if you expect eggs in abundance, feed foods rich in egg-making materials.

Analysis shows that not only eggs, but the bones, the lean meat, and the feathers of fowls are all made up of what the professors call "protein."

Hence, fowls must have protein if they are to give you the best results.

But protein is found only in small quantities in most grains and vegetables, but in large quantities in animal food.

That's why all fowls crave worms and bugs. Instinct teaches them that they need such food.

Of course, they can't catch "the early worm" in winter nor when they are yarded, so you must give them this protein in some other form.

The best substitute is fresh-cut, raw, green bones—the trimmings from the meat market, with meat and gristle adhering to them.

In its raw state it contains exactly the same food elements as the worms and bugs. It contains over four times as much protein as grain, and is rich in lime and other egg-making materials. That's why fowls like it so well and why it doubles the egg-yield, increases fertility, makes larger hatches and stronger chicks, develops earlier broilers and layers, and makes

heavier market fowls—Because it "balances the ration" by supplying what is most scarce in grains. You can't get the best results without it.

But don't confuse fresh-cut, raw bone with so-called "beef scraps," from which most of the nutrition has been removed by the process of preserving.

It's the raw, live worm that the hen likes—not the dried up one.

It is fresh, raw bone that does the work—not dried "beef scraps" nor "bone meal."

Green bone is obtained for almost nothing from your butcher, and easily and quickly prepared, with Mann's Latest Model Bone Cutter. We want you to try this machine. You don't have to buy it unless it suits—just try it first.

To prove to you exactly what it will do, we will send you any Mann's Bone Cutter which you care to select from our catalog on

10 Days Free Trial (No Money in Advance)

It cuts all bone with adhering meat and gristle, never clogging, and wasting nothing.

It automatically adapts itself to your strength so that any one can use it.

It is strong, durable and does not get out of order. But try it and see.

SEND TODAY FOR CATALOG—select the machine you want to try—we'll do the rest. Can we make a fairer offer?

MANN'S LATEST MODEL
Bone Cutter

Make no mistake; you can find no other poultry food that will give as great results at so low a cost, and you can find no other machine that does as good work, so easily. Let us send you one without cost to you, that you may prove our claims.

F. W. MANN CO., Box 56, Milford, Mass.

line-breeding? (3) I have pullets out of two separate strains on female but all out of same male; could I breed back to same male with good results? (4) Do Black Orpingtons mature earlier than White or Buff, and what are the Jubilee Orpingtons?
G. G. G.

Winnetka, Ill.

Answer.—(1) It would be impossible for us to tell you in this department how to build up a strain of Orpingtons, this would take too much space. (2) Line-breeding cannot be explained in a few words, but it is breeding fowls in line year after year without introducing outside blood into the flock. (3) Yes. (4) We do not believe there is much difference in the maturing quality of different Orpingtons. Jubilee Orpington is a name given by Wm. Cook & Sons to that variety.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber to your paper, would like, after seeing W. Y. G. letter, to give some of my experience with sores on chickens' heads. We had no trouble until the mosquitoes got bad. After losing the larger share of our chicks, made a coop and screened it with wire netting and that put a stop to what I consider without a doubt to be mosquito bites. I cured a few by dipping their heads in fuel oil. I keep my coops clean, disinfected and have no mites or any such thing and am positive it is mosquito bites. The oil took the feathers off of their heads and some of them have only one eye, the other having bursted

and run out. Now, I hope this may help some one else. We shall screen our chicks good after this in time and not after we have lost most of our chicks.
Honston, Tex. C. C. H.

Editor American Poultry Journal.

Dear Sir: Will you please answer through the columns of your valuable journal the following: (1) What causes limberneck? (2) Treatment? (3) Prevention? (4) Is it contagious? (5) Will too much moisture during incubation cause weakly chicks?
G. H. B.

Burnt Prairie, Ill.

Answer.—(1) Limberneck is caused by a maggot which the fowls pick up from dead carcasses that have been exposed to a temperature of 90 degrees or over. (2) There is no treatment. (3) Burn

or bury all dead bodies of fowls or animals. (4) No. (5) Yes.

Editor American Poultry Journal.

Dear Sir: We have several hens that have a hoarse rattling and difficulty in breathing. Their eyes also are affected. We diagnosed this roup. Were we correct, and if so, what treatment should we pursue? Very truly yours,

McMinnville, Tenn. Mrs. T. O. B.

Answer.—Procure some one of the various roup cures advertised in these columns and give as directed.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your journal: (1) At what age do S. L. Wyandottes get their

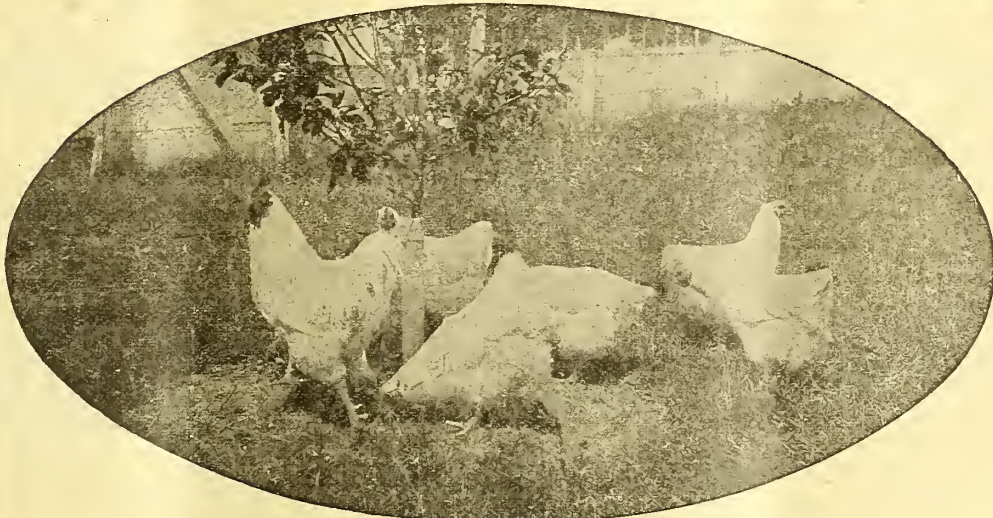

Purina is Not a "Cheap" Feed

—but it gets results! Purina Scratch Feed is made especially to keep hens in laying condition.

Feed Purina to Your Chickens and it Will Make You Big Profits in Results

Made of a big variety of grains and seeds, combined in just the right proportion to make hens lay. No grit—no drugs—no trash. Ask your Grocer or Feed Dealer for the Checkerboard Bag and you'll be sure to get the BEST. If they don't happen to have PURINA, send us their names and we'll send you FREE sample.

true lacing? (2) At what age do they begin to lay? (3) At what age do they start to crow? **W. W.**

Chicago, Ill.

Answer.—(1) When they put on their second coat of feathers, which is when they are about six months old. (2) From five to eight months. (3) From three to six months.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) Can you tell me what is the matter with a chicken three months old. It looked deformed, like hunch back, is under size and has its largest feathers, but not feathered fully. Its neck seems long and thin and is scabby, also its head. Seems well otherwise and eats well. (2) What is the matter with a chicken four months old; its back seems to be flat and wider than naturally. We thought it was hurt and got better for a few days and then got worse. It was very difficult for it to walk, the lower part of its back was on the ground and legs bent, as if it had leg weakness. Had some diarrhoea, dark brown droppings. We killed it and when we lifted it up by the feet, some light matter, like the white of an egg, came out of its neck. (3) We have irrigating ditches, so the fowls won't drink water from a dish with copperous kerosene (or whatever medicine we need to use in water). Would skim milk be just as good as water, or rather the medicine have just as good effect as when given in water? (4) We feed whole wheat, Pratt's Pure Food and a mixed feed all ready for use. They have full run in alfalfa and plowed ground. Some of the droppings are almost black, large and solid, as large as an egg, while others are like mucous, all at the same time. Are we feeding the right feed? (5) Are the prepared poultry foods which are for all diseases for poultry good for diarrhoea and constipation? (6) We use Lee's Lice Killer; it is very strong in odor and will it hurt one month old chicks? **M. F. H.**

North Yakima, Wash.

Answer.—(1) We are unable to say what the trouble is. (2) Symptoms given are those of liver trouble. For treatment give sulphate of magnesium or sulphate of sodium in a purgative dose (20 grains to a dram) and follow with sulphate of magnesium, 10 grains; bicarbonate of sodium, 2 grains, repeated daily for a week. (3) Yes. (4) Your fowl should have access to plenty of good sharp grit, which will overcome this difficulty. (5) Prepared poultry foods are not medicines and should not be expected to correct or influence diarrhoea and constipation. (6) Lee's Lice Killer should not be used for chicks one month old. A little lard to which has been added a few drops of kerosene oil rubbed on top of chick's head will rid them of all lice.

Editor American Poultry Journal.

Dear Sir: Kindly oblige by answering the following questions: (1) Is there any kind of publication as a good doctor book, with home remedies, or a book of authority on poultry? (2) Does it hurt the chicks to mark in web of foot very much? When is proper time for marking? (3) What kind of a bird would it give to cross-breed a Leghorn hen with a Columbian Wyandotte? **L. W.**

Irvington, N. J.

Answer.—(1) "The Diseases of Poultry," by Dr. Salmon, is the best book

Editor American Poultry Journal.

Dear Sir:—Please answer the following in your next issue: (1) What is meant by inbreeding? (2) What is meant by out-breeding? (3) What is meant by line-breeding? (4) Will eggs shipped several hundred miles as a rule hatch well? C. W. W.

Durham, N. C.

Answer.—(1) Inbreeding is using the same stock year after year without introducing any new blood into the flock. (2) This is breeding back to the original blood which produced certain specimens. (3) This is another form of inbreeding, but is done by careful selection, so as not to impair the health and growth of the offspring. (4) Yes.

Editor American Poultry Journal.

Dear Sir: Please publish the answers to the following questions in next month's issue: (1) How can the sex of young Plymouth Rocks be determined? (2) Would it be advisable to put a cockerel with a pen of hens now? Or would it be better to separate them till fall? (3) What is the best feed for fattening? (4) Where can I get dried chipped beets, as I hear that it is a good, cheap winter feed? (5) How old should a cockerel and pullet be before being bred?

Beilevue, Pa.

Wm. J., Jr.

Answer.—(1) This can only be determined as the chicks develop. (2) Keep the male bird away until the breeding

season. (3) A mash consisting of ground corn and oats. (4) We do not know. (5) Seven to nine months.

Editor American Poultry Journal.

Dear Sir: Kindly advise me in your next issue if it would not be a good plan to line the walls of the poultry house with two ply tar roofing paper, both to make the house warmer and to keep lice out? G. E. G.

Ft. Wayne, Ind.

Answer.—We believe this is a good plan and we have practiced it for a number of years.

Editor American Poultry Journal.

Dear Sir: (1) Will you please tell me through your columns the best way to breed chickens of the same hatch? I have some young White Plymouth Rocks from U. R. Fishel's eggs, and want to keep the strain pure. Can I mate the pullets to one of the cockerels? (2) Have a White Wyandotte cockerel which is a fine chicken, except there is a faint mark as of a lead pencil across the ends of wing feathers. Will these marks disappear and would he make a safe breeder? W. R. F.

Seattle, Wash.

Answer.—(1) Yes. (2) Would not advise his use as a breeder.

Editor American Poultry Journal.

Dear Sir: Will you please answer this question: We had 75 R. C. Brown Leghorn pullets and hens and 60 Barred Plymouth Rocks. They laid splendid all winter and spring until they got sick. We lost three or four during the winter. Symptoms: They droop around with feathers ruffled and seem sleepy, and

some have diarrhoea, droppings yellow to a greenish cast, and some seem to be affected in throat, make a rattling sound. Only one of our cocks died; one more had it and got well; they scratch a good deal in the shredded fodder. Could it be the dust or would it affect the bowels? I have lost about 30, mostly Plymouth Rocks. Some die standing up; fall over dead. Most of them droop around a good while and have bowel trouble. Now the ones that have died are last year's raising or older, all but two; lost two young ones. Is it cholera and what will cure it? E. R.

Orleans, Ind.

Answer.—The symptoms you give are those of intestinal catarrh, which is no doubt due to some irritating matter they have access to and may come from shredded fodder. In treating this disease it is especially important that the cause be discovered and removed, otherwise treatment will be of no avail. Give a tablespoonful of olive oil as a laxative to carry off any irritating matter that may be in the intestines; then follow with $\frac{1}{2}$ to 1 grain of bicarbonate of soda and 2 grains of subnitrate of bismuth in a little water three times a day. If the diarrhoea persists after the fever has disappeared and the appetite is returning, it may be checked with laudanum, 5 to 10 drops.

Editor American Poultry Journal.

Dear Sir: I would like for you to answer in the next issue of your journal the following questions: We have about 100 acres of ground and on this space run at large about 50 hens and roosters, 50 young ducks, 450 young chicks and nine young geese. The poultry are in

Chimney Flashing—Roof Book, page 16, tells how to do it.

No-Tar Roofing

Defies Time, Water, Sparks, Cinders, Wind

"No-Tar" Roofing has a surface as hard as flint—it is flint! Can't catch fire from sparks or cinders. It's as flexible as rubber—and absolutely waterproof. It's tougher than leather. Costs less and lasts longer than shingles, iron or steel. Won't run in the hot sun. The building that has a "No-Tar" Roof protection will last longest.

Accepted by all Fire Insurance Companies, who charge 25 per cent less for insuring buildings protected by "No-Tar" Roofing than for buildings with shingle roofs.

For Store Buildings and Factories "No-Tar" Roofing is durable and satisfactory for flat or steep roofs than tin or gravel roofing. Will not rot, rust or run.

For Barns and Outbuildings "No-Tar" Roofing is made in various weights, for all sorts of buildings. Nothing better or cheaper for sliding houses, outbuildings, etc. All joints water tight. "No-Tar" Roofing keeps stock and poultry snug, safe and warm in coldest weather. Quick and easy to lay. Exceedingly popular among farmers, stock raisers and poultrymen.

For Houses "No-Tar" Roofing will add immensely to the appearance of your residence. Use it on your new house or cover the old, leaky shingle roof with "No-Tar" Roofing and avoid disaster from water or fire. "No-Tar" Roofing is a non-conductor of heat or cold. Keeps your house warm in the winter and cool in the summer. Try it on your porch or kitchen.

Free Samples to Test When we send you the Free Sample of "No-Tar" Roofing we will tell you ten ways to test it and prove its superiority to any other roofing.

Free Roof Book This book tells "How to Do Your Own Roofing." It tells how to make Valleys, Gutters, Flashings, etc. How to Measure a Roof. Explains the whole roofing proposition. We send the book FREE, postpaid, on request. Get "No-Tar" Roofing from your local dealer. Special nails and cement FREE.

The Heppes Co., 3042 Fillmore Street, Chicago

Dealers, Attention—Write for FREE PLAN, by which you can quickly build up a profitable Roofing Department.

the orchard and garden around the house, and if they are left to run at large, do you think the disease which starts in the young chicks or old hens is contagious for ducks and geese? We have lost seven of the young geese, 40 ducks, 25 hens and roosters and 300 of the young chickens. The young chicks about a week old died with bowel trouble, or something which we suppose was bowel trouble. The chicks three and four weeks old and frying size, have died from a disease which we suppose is limberneck, but are not sure. They drop their wings and cannot use their feet, and their necks drop to the ground. Combs, however, are bright red until death. The old hens, ducks and geese are affected in the same way. The first notice of the disease in the old fowls is dropping the wings and then sitting in the corners of the fence. They cannot use their feet nor raise their heads, and upon approaching them, they simply flap their wings and are helpless. We feed wheat and corn, and clabber cheese that is scalded and had the whey taken from it. The young stock and some of the old fowls seem to eat a great many green grapes. About three weeks ago, fed some mouldy wheat. Ducks and young and old chickens drink out of the same water founts. Water is changed every day. Two or three hens had swelled heads and swelled eyes when they died. Please tell us what the disease is that is affecting our poultry and give us the name of some good remedy.

Mt. Vernon, Ind. Mrs. H. M.

Answer.—The main cause of your trouble is improper feed and care. Thoroughly scald and disinfect your feed and drinking vessels and give good sound grain as food. Also procure some one of the various tonics advertised in these columns and give as directed. You have allowed your stock to get in a very bad condition and proper feed and care will do more good than all the medicine you could pour into them.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions and oblige: (1) Do the best White Orpington fowls have the yellow on wings or back? (2) Which should be selected for breeding cock to be used next year—a long legged, lanky, or a thick set, short legged one?

Chagrin Falls, O. W. C. F.

Answer.—(1) No. (2) The thick-set, short-legged one.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions: (1) I have some Houdan chicks hatched June 26, 1907. What age male do I want to mate them with next year? Will mate by January 1, 1908. (2) Will the cockerels in the bunch do to mate with hens and pullets to get fertile eggs and strong chicks next season. Will mate same date. The pullets in question are older by a month or two than the cockerels. The hens will then be two years old.

Carlsbad, N. M. W. R. H.

Answer.—(1) A two-year-old cock. (2) The cockerels should be mated to the two-year-old hens.

Editor American Poultry Journal:

Dear Sir: In your July number I note question by W. Y. G., Jacksonville, Fla., i. e., what you term chicken pox. Here in Jamaica the natives call this same disease yaws, and they do not know the cause of it. Some say one thing and

Owen Farms 1907 Chicks

are even golden Buff in Orpingtons and Rocks; pearly White in Rocks and Wyandottes; iridescent greenish Black in Orpingtons; cleanly and sharply Barred in Rocks.

IN ALL VARIETIES

We have chicks approaching perfection in type; we have chicks approaching perfection in color; we have chicks approaching perfection in heads; we have chicks approaching perfection in minor details.

IN ALL VARIETIES

We have chicks combining most of the above characteristics, and approaching PERFECTION.

LUMBER BARGAIN PRICES.

A wonderful opportunity is offered you to buy lumber and building supplies of every kind at **Prices that will save you big money.** Such a chance seldom occurs. Lumber for your house, church, barn, meeting house, crib, store, factory, and in fact, buildings of every kind. We can furnish absolutely everything needed in construction material. Have your carpenter or builder make a complete list of everything you require, including Lumber, Sash Doors, Nails, Roofing, Siding, Ceiling, in fact, anything you may need in building material or merchandise of any kind.

Send us your Lumber Bill for Our Estimate.

We bought at Manufacturers' Sale over 50,000,000 Feet of all kinds of Lumber and Finishing Material. We are making special concessions, to those who buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. Our prices will save you 30 to 50 per cent.

We cheerfully invite inspection of our Lumber stock and will be glad to have you come to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all what we say of it; make your own selection and see it loaded. It is not necessary to come to Chicago; we can easily sell you by mail. We can quickly convince you of the wisdom of placing an order with us. Just send us your lumber bill, and we will easily "Show You." On application we will send copies of letters from customers who have bought. They saved money why can't you? Write us to-day. **WE PURCHASED EVERY EXPOSITION, INCLUDING THE \$90,000,000 ST. LOUIS WORLD'S FAIR. ASK FOR OUR FREE 500 PAGE CATALOG, No. C. H. 186. IT QUOTES LOW PRICES ON BUILDING MATERIAL, MACHINERY AND FURNITURE.**

CHICAGO HOUSE WRECKING COMPANY, 35th and Iron Sts., CHICAGO.

some another. However, I have concluded that it is caused by a very diminutive insect that is carried by the wind or that is secreted in the earth and makes its appearance at certain times of the year when the proper conditions admit of its doing so. I have lost 1,200 young chicks from this same disease this year, and have spent a neat little sum to find out what it is and what to do to prevent it, and what will cure it. I am not positive what it is, neither what to do to prevent it, but I rather think by keeping the young chicks off the ground for the first two months of their lives will have a good deal to do in preventing it. I have 180 out of 200 that are two months old and have only had one case which I isolated the moment I saw it. I keep these chicks in same yard where I lost 1,200, but have them in a run with brooders attached, the floor being 22 inches above the surface of the ground. I put a few on the ground and found they contracted the sickness at from five to six weeks old. I am a new beginner here, and find a different problem in the poultry business than it is in middle states. I find that your valuable journal is a splendid companion; a teacher and a great help to my wife in her house and kitchen duties. Your question and answer columns are simply grand, and you will please me very much by advising W. Y. G., of Jacksonville, Fla., through your journal to use ointment of precipitate of mercury (white). Apply it with a stiff brush. It will cure 90 per cent of chicks affected in 60 hours, by one application daily for moderate cases and two in extremely bad cases. Trusting you will not think me too premature. A. J. Saymor.

Kingston, J. A., B. W. I.

Editor American Poultry Journal.

Dear Sir: Please answer in next issue: 1. Have P. Rock hen that acts just like a chick with gapes, refuses to eat, feathers below vent soiled, as if she had looseness of bowels. (2) Have double yard, one 35 feet by 75 feet, another 30 feet by 65 feet, the two are connected so the fowls use both; how many hens can I keep in it? Roost is 10x12, 7 feet high, scratching floor below roost. (3) Is it advisable to keep capons in with pullets? (4) If the roosting house and poles are kept free from lice are the lice liable to infest the fowls to any degree of injury? G. F. O.

Sheridan, Ind.

Answer.—(1) Bacterial enteritis. You should disinfect your premises with five per cent solution of carbolic acid. Give subnitrate of bismuth three grains, powdered cinnamon or cloves, one grain, powdered willow charcoal, three grains. This may be given twice a day mixed with the food or made into pills with flour and water. (2) About 200 fowls can be kept in yards of this size providing they are supplied with plenty of green food. Your roosting room is too small and your roosts are five feet too high. (3) No. (4) Yes, the fowls should be dusted or supplied with a dust bath.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber for your valuable paper and I think it the best of all poultry papers, I would like you to answer the following questions in your next issue. I have a pen of silver pencilled Wyandottes. I feed them wheat, corn and oats in litter, oyster shell and grit; beef scrap and charcoal before them all the time; fresh water four times

a day. I give them greens, such as cabbage, clover, etc. They have stopped laying all of a sudden, what is the cause, and how can I get them laying again?

New Durham, N. J. C. F. S.

Answer.—You cannot expect your fowls to lay all the time. They must have a rest. At this season of the year most all hens let up to a greater or less extent until they get through moulting. Keep your fowls in good condition and they will start laying again in the early fall.

Editor American Poultry Journal.

Dear Sir: I wish to ask you the following two questions, which you may answer in your next issue and greatly oblige me. (1) Are cracklings left from rendering lard good to feed chickens, allowing them to eat from the cake as they want it, instead of meat scraps? (2) I have a hen that gets on the roost instead of nest in the day time to lay, is there any way to stop her? J. D. M.

Louisiana, Mo.

Answer.—Cracklings are very good but we do not consider them equal to beef scraps. (2) Not that we know of.

BIG MONEY IN POULTRY.

Our big Poultry Book with many new illustrations tells how to make it; also how to feed, breed, grow and market Poultry for best results. Plans for houses and a great mass of useful information. Tells how to start small and grow big. Illustrates and describes the largest pure bred Poultry Farm in the world; tells about our many varieties; quotes lowest prices on Fowls, Eggs, Incubators and Brooders. Mailed for 4c postage. FRANK FOY, BOX T.B. • DES MOINES, IOWA.

"PITTSBURGH PERFECT" IMPROVED POULTRY AND GARDEN FENCE

THE BEST FENCE IMPROVED—more wires, smaller spaces—
—the fence that knows no breaking, spreading of stays or sagging and requires no top or bottom boards.

Simplest, strongest, most rigid construction possible in a wire fence.

At every contact point wires are **welded together** the only process of fastening that leaves the galvanizing intact.

Smallest chicks can't get through, largest animals can't break it. Always tight, upright, firm. Adjusts to uneven ground and weather changes.

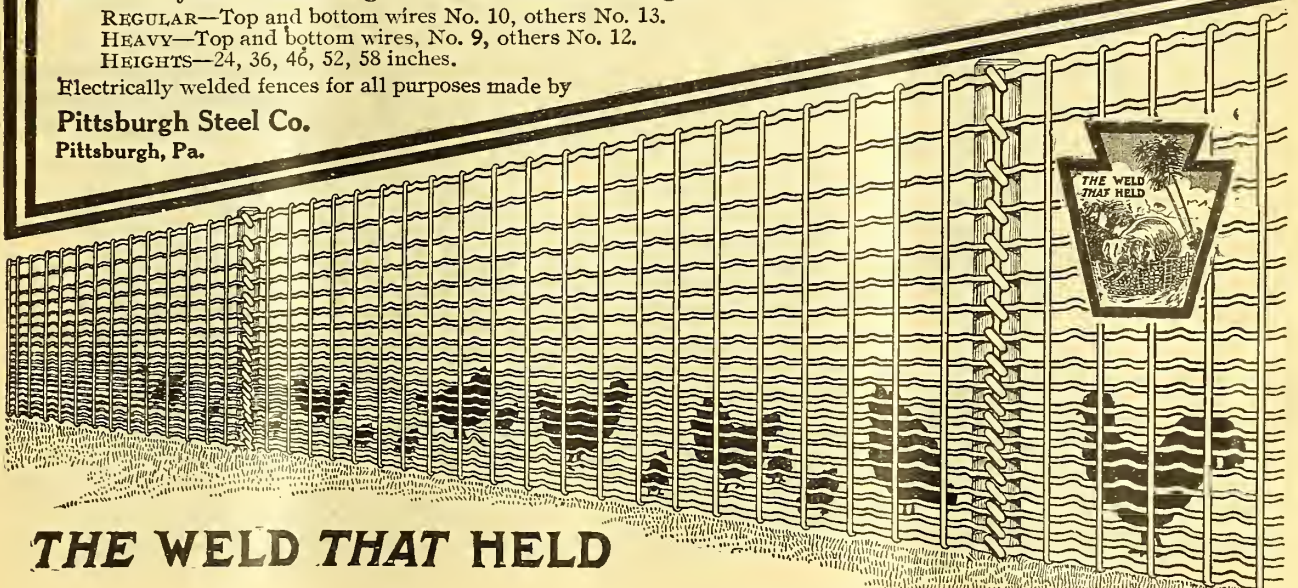

REGULAR—Top and bottom wires No. 10, others No. 13.

HEAVY—Top and bottom wires, No. 9, others No. 12.

HEIGHTS—24, 36, 46, 52, 58 inches.

Electrically welded fences for all purposes made by

Pittsburgh Steel Co.

EVERYTHING FOR THE POULTRYMAN

CLEMENT & FIKE'S WHITE WYANDOTTES.

A Trip to Libertyville—A Day Spent on the Great Wyandotte Plant Where the Greatest Strain on Earth Is Produced.

After repeated invitations and solicitations from Mr. Fike we finally took time to make a visit to this plant in the latter part of July.

Libertyville is only a little over an hour's journey from the great city of Chicago, and the farm of Clement & Fike is located about three miles from town on a beautiful country road and the drive out there is most delightful and invigorating.

We were met at the depot by a young man with a rig and in half an hour were at the farm, where we found Mr. Fike, the general manager, trying to hobble around on a pair of crutches, he having met with a serious accident about five weeks previous to our visit. It probably would be well to tell our readers how this accident happened. It seems that Mr. Fike had made so much money out of his White Wyandottes that he did not know what to do with it, so invested some of it in a blooded mare. Evidently the mare did not take kindly to her new owner and when he was not looking tried to push him into the next county with her hind feet. She did not succeed in pushing him that far, but she did succeed in putting him in bed for five weeks. Her hind feet came in contact with his right leg between the knee and hip, bruising it very badly, but not breaking any bones. This bruise caused blood poison to set in and it was thought for a time the poultry fraternity would lose one of the greatest breeders of white Wyandottes this country has ever known, but we are glad to say that Mr. Fike is now able to be around, and while the leg is still very stiff and sore, there are hopes of his recovering the full use of it.

This was not our first visit to this farm and the remembrances of our former visit probably had a good deal of influence in determining us to go again. To tell the truth, we are very fond of fried chicken and on our first visit we were treated to one of the best fried chicken dinners it had ever been our pleasure to partake of, and, of course, knew that at this season of the year the young stock was just about the frying age, and thought that perhaps we would be lucky enough to again be treated as we were on our first visit, and in this we were not disappointed, for a few minutes after our arrival Mrs. Fike announced dinner, and if our readers ever ate any of the fried chicken as prepared by Mrs. Fike we guarantee that every one of them would be raising White Wyandottes before another season.

After dinner Mr. Fike got out his crutches and hobbled out to where his men were building a new colony house, and while he rested in the shade we took a trip of inspection around the farm and incidentally took a few snapshots of some of the young and old stock, a few of which we present in this issue.

The first thing that attracted our attention was a bunch of about 200 cockerels, as white as snow and a good percent of them show birds, and many of them fit to show at the time of our

visit. The next to attract our attention was a flock of Wild Mallard and Pekin Ducks on a large pond in the center of the farm. These Mr. Fike raises for his own use and amusement. A little further on we came to a long row of colony houses on the edge of a large corn field and in these houses and in the shade of the corn was some fifteen hundred early pullets, the grandest lot of White Wyandotte pullets it had ever been our pleasure to see at this season of the year. A few of them are shown in the accompanying illustration, but as the day was warm it was almost impossible to get them out of the shade, so we had to content ourselves with getting a snapshot of only a very few, but this will give our readers an idea where early show birds can be procured if they are looking for them.

On the east side of the farm, along the bank of the river, in the shady ravines, we found hundreds of young stock of various ages, and after wandering around through this section for a considerable length of time, we came to the breeding yards, and the first one contained the male bird shown in the center of the full page illustration in this issue. Despite the time of year this bird was in fine condition and we could not resist taking a snap at him. Mr. Fike informed us that a thousand dollars could not buy this bird. He certainly is a fine specimen of the White Wyandotte variety. After a hasty glance over the various pens we made our way back to where we had left our crippled friend and prepared to take our departure.

So far we have said very little about the White Wyandottes on this farm; we do not believe it is necessary, as this firm and the quality of stock raised by them is too well and favorably known to readers of American Poultry Journal to need any further recommendation from us. We will say, however, that we never had the pleasure of viewing a better or more promising flock of young White Wyandottes, and Mr. Fike informed us that they had in the vicinity of 4,000.

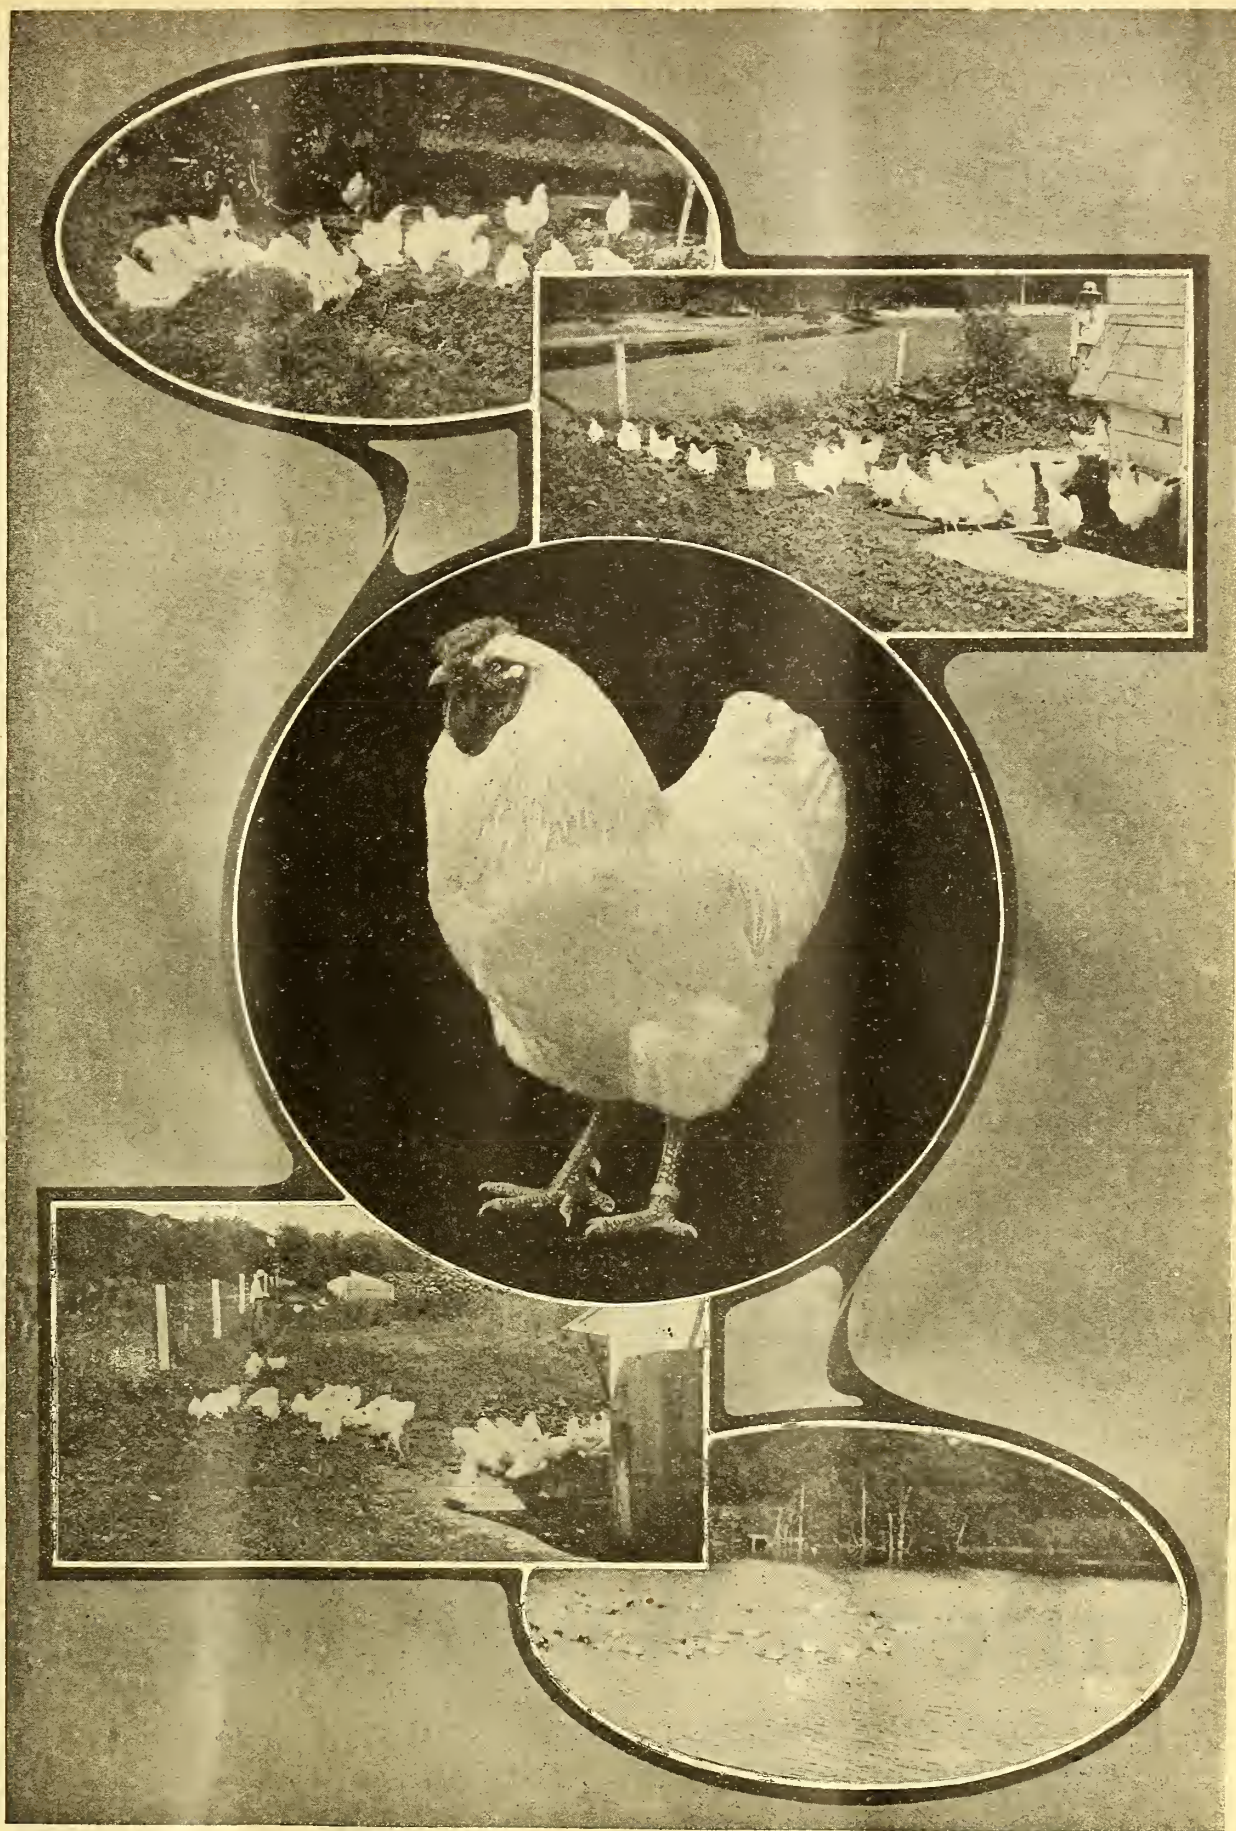

In conclusion, we wish to say that if any of our readers desire to spend a pleasant and profitable day they should make a visit to the poultry farm of Clement & Fike, Libertyville, Ill., where they will always find the latch-string on the outside. **Jas. W. Bell.**

PILLING CAPON TOOLS

Shows, Associations and Clubs

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News

THE ILLINOIS STATE FAIR.

The fifty-fifth annual Illinois State Fair will open at Springfield on Friday morning, Sept. 27, and continue eight days, closing Saturday afternoon, Oct. 5, at 5 o'clock.

The fair of 1907 will be greater and grander than ever.

The revised premium list, together with the added cash premiums, is bringing exhibitors from every section of the United States, and there will be seen many new exhibitors at the forthcoming fair.

One of the new and important features of the fair this year will be the inauguration of the new amusement grounds in "Happy Hollow." This will be to the "Greatest Fair on Earth," what the "Midway" was to the Chicago world's fair and the "Pike" was to St. Louis. All the shows and amusements will be confined to this new location, and already every available foot of space has been contracted for by some of the very best and cleanest amusement enterprises now on the road.

New Restaurant Building.

Another new improvement on the grounds this year will be the new restaurant building, 77x146 feet, which is being erected just west of the Woman's building. This will be a handsome building with cement floors, tile roof and supplied with all necessary equipment for conducting a clean, healthy place for our visitors to get their meals. The building will be divided into four distinct rooms, so that a number of concessionaries may be provided for.

Special effort will be made to provide plenty of attractions to entertain all visitors.

Other attractions will be provided,

notice of which will be given at a later date.

The prospect at this time for the success of the coming fair is the brightest ever known, so long in advance of the opening day and with good weather, old Illinois will again prove its title to having "The Greatest Fair on Earth."

MISSOURI STATE FAIR.

This institution was established by an act of the general assembly in 1899. Up to this date there has been appropriated from the revenue fund a total of \$321,000, and this sum together with \$123,000 from other sources has all been expended in buildings, equipments and improvements of grounds. The original site upon which the fair was built consisting of 160 acres and conservatively valued at \$32,000 was donated to the state and adjoins the city of Sedalia on the southwest. Including appropriations from the revenue fund and expenditures from other sources and the value of the land donated the total holdings of the state on account of this institution at this time is approximately \$500,000.

No state fair has so many practically fireproof buildings, nor buildings better adapted to the purposes intended, nor more permanently or economically constructed, and it is only a question of a few years until the Missouri State Fair will surpass all other like institutions in the way of high class buildings and valuable equipment.

The fair this year will be held at Sedalia, Mo., Oct. 5-11.

Special poultry classes, embracing all standard and most valuable breeds of chickens, turkeys, geese and ducks most generally bred in Missouri, have been made and are open to Missouri

breeders only. Missouri breeders may also exhibit in the classes open to the world.

The fair will be held October 5-11. Write Secretary J. R. Rippey, Sedalia, for premium list or other information.

JAMESTOWN EXPOSITION POULTRY SHOW.

The Jamestown Poultry Show will be held in the Convention Hall, just inside the main entrance of the Exposition grounds at Norfolk, Va., Oct. 22-Nov. 1, 1907. It will be a show national in its character where the poultry breeders of the North, South, East and West will meet in one great contest where the best birds will win and where the good hand of fellowship will be seen on all sides. It will be an American show for American poultrymen, all working together for the betterment and upbuilding of the greatest industry on the face of the earth. All together for Jamestown and make it a notable success, a memorable occasion, a new epoch in the history of our business that will mark the beginning of greater and better things! Applications are being received at headquarters for premium lists and entry blanks from every section of the Union which indicates a widespread interest in this important poultry event.

The Jamestown Poultry Show will take place at a time of the year when the weather along the coast will be ideal, and the attendance at the great exposition will be at its best. The opportunities for pleasure and sight-seeing around Jamestown are not surpassed by any other location on the globe.

The following judges will place the awards: T. F. Rigg, J. H. Drevenstedt, F. J. Marshall, A. F. Kummer, W. C. Denny, George M. Knebel, T. Reid Parrish, W. J. Stanton, Charles T. Cornman, R. E. Jones, W. S. Russell, Frank Shaw, T. M. Campbell. First assistant superintendent, Theodore Hewes, Indianapolis, Ind.; second assistant superintendent, E. L. Doak, Nashville, Tenn.; chief of poultry press, Reese V. Hicks, Knoxville, Tenn.

The following specials have been added to the list: Corno Mills Company,

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE; BOTH OLD AND YOUNG.** Illustrated circular free.

Stokes, silver medal; Feathered Warrior Publishing Company, two \$25 gold and silver trophies. Other associations, clubs and individuals are arranging to offer valuable specials.

For premium list, entry blanks and other information, address John A. Murkin, Jr., superintendent, Nashville, Tenn.

NASHVILLE, TENN.

The Tennessee State Fair Association will hold its second annual fair in the city of Nashville, September 23-28, 1907. You are no doubt aware of the fact that this fair is recognized as one of the greatest fairs in the United States.

The management were so well pleased with the reception accorded the poultry show at the fair last year and the tremendous success attending same and realizing as they do the importance of this great industry to the people of the state and South they have decided to offer \$1,150 in cash premiums in this department this year, besides there will be a \$50 silver cup, \$25 banner gold special and other attractive special premiums.

The Pigeon and Pet Stock Department of the big poultry show will be a prominent feature.

A poultry institute will be another big feature of this show, free to those interested in raising poultry. The best lecturers and demonstrators have been engaged to instruct those attending the institute which will be located on the grounds and continue the entire week of the fair.

Another feature will be the exhibition yards, where flocks of the various breeds of thoroughbred poultry will be exhibited under natural conditions. A big egg laying contest is now being arranged.

All of these besides other attractions, aside from the great poultry show, will make the poultry section the greatest

poultry event ever arranged by a state fair.

Nashville besides being the greatest poultry center of the South is now recognized by the breeders over the entire country as one of the greatest poultry show cities in the Union. A winning at Nashville means much to the poultry breeder. A winning at Nashville is a valuable asset to any poultry plant. Come and bring your birds. John A. Murkin, Jr., superintendent poultry department.

For premium list and entry blanks, address J. W. Russwurm, general manager, Nashville, Tenn.

ST. LOUIS, MO.

At the meeting of the St. Louis Poultry and Pet Stock Association, held July 2 in the Missouri Athletic Club, St. Louis, it was decided that their first annual poultry show will be held in St. Louis November 25 to November 31, 1907. The committee on judges have selected Ross C. H. Hallock of St. Louis and D. M. Owen of Athens, Tenn., another poultry judge, and the pigeon judges will be decided on at the next meeting. The advertising committee is at work on the programme catalogue, which will be up to date in every respect. Twenty thousand of these catalogues will be distributed at the show room and through the mails free. Entry blanks can be obtained after September 1 and entries will close November 10. All requests for entry blanks, space in show room for exhibiting poultry appliances and advertising space in catalogue should be addressed to T. W. Orcutt, secretary, 4711 Page avenue, St. Louis, Mo.

WISCONSIN STATE FAIR.

The poultry exhibit at the coming Wisconsin State Fair at Madison, Sept. 9-13, 1907, bids fair to exceed in every particular that of any poultry exhibit ever held in the state. Nearly \$1,800 is offered in cash premiums in this department. The judging will be done by Mr. Sharp Butterfield, Windsor, Canada. Premium lists and entry blanks

on application to John M. True, secretary.

BINGHAMTON, N. Y.

The annual fair, A. K. C. Bench Show and Poultry Show of the Binghamton Industrial Exposition, will be held at Binghamton, N. Y., Oct. 1, 2, 3, 4, 1907. For prize lists apply to Henry S. Martin, secretary, Binghamton, N. Y.

PULASKI, PA.

The Pulaski association will hold their next fair and exhibition Sept. 17-19, 1907. Judge H. A. Emmel, Mars, Pa., will judge all live stock and poultry. We had a large display of fancy poultry last year and invite all breeders to show with us. Premium list now ready. James S. Wood, secretary.

DALLASTOWN, PA.

The York County Fanciers' Association will hold their third annual show Nov. 25-30, 1907. Judge H. A. Emmel, Mars, Pa., has been secured as judge. For premium list write Jacob Eberly, secretary, Box 12.

PORTSMOUTH, OHIO.

The Portsmouth Poultry and Pet Stock Association will hold their annual show Nov. 26-30, 1908. Thos. F. Rigg, judge; Nate T. Rickey, secretary.

RICHMOND HILL, L. I., N. Y.

The Long Island Poultry and Pet Stock Association has arranged to hold an exhibition Nov. 19-22, 1907. Robt. Seaman, secretary.

LA CROSSE, WIS.

The annual exhibition of the western Wisconsin Poultry Association will be held Dec. 11-16, 1907, with James A. Tucker, judge. This association is incorporated and receives state aid. Large cash and special premiums will be offered. Put this show on your list early. For further information address E. H. Hoffman, secretary, La Crosse, Wis.

BEAUMONT, TEX.

The first annual exhibition of the East Texas Poultry and Pet Stock Association will be held Nov. 25-30, 1907. Ben C. Easton, secretary.

AMERICAN BREEDERS' ASSOCIATION FOURTH ANNUAL MEETING.

The American Breeders' Association will hold its fourth annual meeting at Washington, D. C., Jan. 28, 29 and 30, 1908. Secretary James Wilson, the president of the association, will speak and other able and prominent men are being secured to take part in the program. The sessions will be held in the National Rifles' Armory, 918 G street, N. W.

MEETING OF OHIO POULTRY BREEDERS.

There will be a meeting of the Ohio State Poultry Show at the Poultry Department on the State Fair grounds Thursday, September 5, at 1 o'clock sharp, for the purpose of perfecting plans and making arrangements for the big Ohio show. All poultrymen are earnestly requested to attend this meeting and have a voice in the management of a show in the interest of all the breeders of the state. By order of the president, M. M. Barger.

BLACK MINORCA CLUB.

The American Black Minorca Club has gotten out some very fine ribbons which will be offered as specials for Single Comb Black Minorcas in poultry shows throughout the United States and Canada. Competition open to all members of the club and Minorca breeders who join the club before the entries close. Minorca breeders should write for membership application blanks and show secretaries for full particulars to George H. Northrup, secretary-treasurer, Raceville, N. Y.

ROSE COMB BLACK MINORCA CLUB.

The International Rose Comb Black Minorca Club is taking on new life. New members are being added to its list and preparations are being made to issue a catalogue. All breeders of Rose Comb Black Minorcas are invited to join the club now, that their names may be enrolled before the catalogue goes to press.

This club is offering fine special ribbons for Rose Comb Black Minorcas in poultry shows throughout the United States and Canada to be competed for by members of the club and by Rose Comb Minorca breeders who join before the shows open. Membership application blanks will be furnished on request and full particulars about the ribbons will be sent to all secretaries of shows who write for same. George H. Northrup, secretary-treasurer, Raceville, N. Y.

BUFF ORPINGTON CATALOGUE.

The National Single Comb Buff Orpington Club is now working on its 1907 catalogue. This book will contain over 100 pages of information on S. C. Buff Orpingtons, and will be very valuable to all interested in Buff Orpingtons.

tons. The names of all members will be published free in this book, so if you are a breeder, send to the secretary for application slip at once, and find out more about this breed and the club.

The club will offer a handsome silk badge for every first prize won by a member at any poultry show or fair. Show secretaries are requested to write for the club's offer to insert in premium lists. The club now has over 600 members and adding new names to the list every day. The club has special inducements to all who join now. Write for full particulars to the secretary, Will H. Schadt, Goshen, Ind.

PRIZE WINNERS FOR SALE CHEAP
By the Great Central Poultry Farm

In eight weeks our birds have won 8000 prizes at state and county fairs. This indicates the quality of our stock. There is no better in the country. As breeders we fully understand our business. We ship nothing but standard birds. They are fully guaranteed and warranted to reach our customers at the nearest express office in good condition. If any fowl fails to do this we duplicate the bird. Eggs in season from all our breeds. We are now booking orders for stock, shipping daily.

We have recently purchased the entire stock of one of the largest breeders of Partridge Cochins in the United States, and we are able to furnish prize winners in this variety. Send for our special prices. We offer the following varieties to our customers:

Light Brahmas,
Dark Brahmas,
Partridge Cochins,
Buff Cochius,
*White Cochins,
*Black Cochins,
Black Langshans,
Barred Plymouth Rocks,
*Pea Comb Barred P. Rocks,

Woman's Home Department

MABEL BATES WILLIAMS, Editor

This Department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others, a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it. All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton Street, Chicago, Illinois.

THE REST CURE.

There is no one who does not deserve good health. Too few of us, however, stop to think of the old adage, "An ounce of prevention is worth a pound of cure," until we reach the giving up point, and are obliged to send for the doctor. We use our will power as a whip for our

tired bodies until nature at last rebels. We say that there is so much work to do that we cannot snatch a few minutes in the course of the day for complete relaxation, and yet deep in our hearts we know that the time is bound to come soon or late, when the overworked body, relaxed and run down, will, because of that condition, become a prey to some acute disease

which it could easily have resisted if we had but exercised a little common sense in our daily living. As a result not only is there suffering and at best a lingering convalescence for the invalid, but anxious hours of long, tender watching and nursing and added duties for the very ones she has been trying to save. Surely it is better to shirk a little of the work if necessary; to let some of the clothes go unironed, or the housework undone; to leave the extra ruffles and tucks off the children's clothes, and omit some of the side dishes for dinner. But the woman who is systematic in her daily rest times, as far as possible, and who takes care of her health, will find that with renewed strength comes vigor and a zest for the work once so monotonous and wearying, and that she is actually able to accomplish, with ease, more than ever before. Surely so simple a remedy is worth trying.

IN THE KITCHEN.

Last month we spoke of conveniences in the way of kitchen utensils. The list of things necessary for comfort and convenience in this important branch of the housework is not complete if we omit mention of another very important part of the kitchen outfit. The wise housewife considers the conserving of her strength to be a greater economy than the saving of one or two dollars in the course of a year, and to this end provides herself with a supply of scouring powders, household ammonia, sal soda, for cleaning obstinate pots and pans, a piece of pumice stone for the same purpose, and little brushes of various sizes and shapes, for cleaning vegetables, and for reaching the corners which otherwise are missed in the weekly cleaning.

Javelle water is among the greatest helps in washing the white clothes, removing stains and dirt as if by magic. There is no danger of its rotting the clothes if they are thoroughly rinsed. It is made by boiling together a gallon of soft water and four pounds of ordinary washing soda for ten minutes, then adding one pound of chloride of lime. Let it cool, and keep it in a tightly corked stone jug. Half a cupful in the cold water in which the white clothes are soaked before washing them will take away half the ordinary work of rubbing. The javelle water must be kept out of the reach of little children as it is anything but a good diet for babies. Among other laundry conveniences should be included a bar of naphtha soap, for use when a few articles are to be washed out in a hurry, and a bar of wool soap. The list of kitchen labor savers varies according to individual needs, but whether it be large or small it should be kept as complete as the purse will allow.

It may seem like a far cry from kitchen utensils to moral atmosphere, but it is nevertheless true that there is a closer connection than many people realize between the two. It is, consciously or unconsciously, a mental and moral support to the average woman to know that she has at hand all needed conveniences for making her work light. It is easier to be happy, and even to be good, when the household wheels move without friction, and the effect will imperceptibly make it

Pratts POULTRY GUIDE

HINTS FOR POULTRY RAISERS

PROFIT \$6.25 PER PULLET

Twenty Pullets, Fed Pratt's Poultry Regulator, Laid 3427 Eggs in One Year

KEARNY, N. J. — Frank Freer, of 85 Highland Ave., made \$125.00 net last year from only 20 single-comb, white leghorn pullets, raised and kept on a plot 25x60!

The pullets were given Pratt's Poultry Regulator, and laid 3,427 eggs in 1906. Mr. Freer sold chicks and eggs amounting to \$131.31, and used \$25.00 worth of eggs and cockerels himself. He still has 25 fine fowls, and the total cost of feed for 1906 was \$60.00.

Pratts

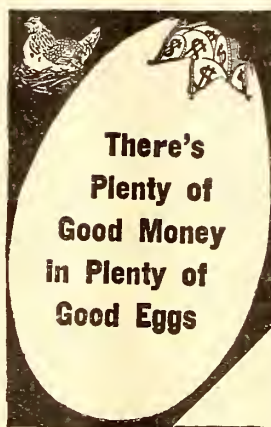

POULTRY REGULATOR

(For 36 years called Pratt's Poultry Food)

did it! Why not make money out of your poultry the way Mr. Freer did?

Pratt's Poultry Regulator not only makes hens lay more than any other thing you can give them, but it also increases the size of the fowls, adds lustre to their plumage, makes the eggs fertile, gives strength and quick growth to little chicks, makes the comb and wattles a bright red, prevents gapes and leg weakness, and will positively cure all poultry diseases.

A dollar carton is enough for 100 chickens for a month!

There's
Plenty of
Good Money
in Plenty of
Good Eggs

ADVICE FREE

Write us about all your poultry and livestock troubles.

Our Veterinary Staff is at your service free of charge, and any questions relating to the care and treatment of your fowls or animals will receive expert attention.

Tell us just what your troubles are, and let us help you to make more money.

Pratts Books

We are now printing the five books named on the following list. Simply drop us a postal card mentioning which you want and we will mail you copies as soon as they are off the press. The regular price of these books is 25 cents, but if you are interested in Pratt's preparations you get them free.

Pratt's New Poultry Book.
Pratt's New Horse Book.

self felt upon every member of the household, for nothing is so contagious as good nature.

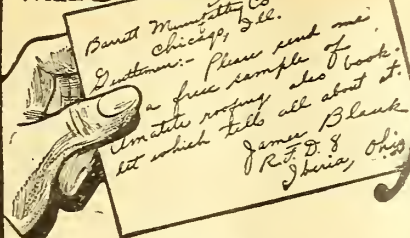

EXPERIENCE DEPARTMENT.

Mrs. J. P. Crum, of Holyoke, Mass., says: "If the range has become badly rusted or has not been blacked for some time give it a good scouring with any of the good preparations which all housewives use nowadays to brighten and clean their spots and pans, sinks, etc. When it is perfectly dry wipe it off with a newspaper and a little clean grease. Then apply the stove blacking and the stove will take a fine, smooth polish. I find it much easier to give a little coat of fresh polish every day or two, after the dinner work is out of the way, than to resort to the dirty and tiresome once-a-week cleaning which so many people practice. Often a minute's brisk rubbing with an old newspaper is all that is needed. There seems to be some quality in the printer's ink that brings back the shine to a dull stove. A good cement for a cracked stove is made by mixing wood ashes and salt, half and half, making a paste with cold water, and filling the cracks when the stove is cool. This will soon harden. While I was away from home for several weeks during a rainy spring the irons became so badly rusted that the usual salt rub did no good, but I soon had them in proper condition to use by rubbing them with fine emery paper and sweet oil."

Mrs. H. C. L., of Bliss, Okla., sends the following helpful household hints: "Do not be discouraged if you discover white spots on the polished surface of your dining room table. Take three soft, clean cloths and three saucers containing respectively kerosene, alcohol and sweet oil. Rub first with kerosene, then the alcohol and last with the oil. I removed some obstinate marks of long standing in this way. There are a few things which no housekeeper should ever go without on the ground of economy. One of these is a good scouring powder, and another is household ammonia. The latter will keep the drain and refrigerator pipes clear from grease and shine, if poured in, with hot water, every day or two, and save plumbers' bills. Its use in washing clothes will not only make the washing easy, but will lower the soap bill by half. Try a little, also, in the starch for the white clothes, but not for the colored ones. Every one knows, or ought to know, that a tablespoonful in a pail of water will brighten the old carpet until it looks nearly as good as new, and its possibilities in housecleaning time are legion. Last, but by no means least, after a hard day's work, if you are too tired to sleep try a quick sponge bath, using a tablespoonful of ammonia to a bowl of water, and it will take all the ache out of the taxed muscles and send you to sleep like a care-free child."

Mrs. Theron Plum, of Yuma, Col., contributes the following recipe for cake with clabbered milk and baking powder which is delicious, either for a layer cake or for little, fluffy "patty cakes." One cup of sugar, half a cup of butter, one cup of clabbered milk, not too sour, two eggs, two cups of flour sifted twice, two heaping tea-

"A POSTAL CARD

Amatite ROOFING

Free Sample for the Asking

This sample is not so large that you can cover your barn with it, but 'tis plenty large enough to examine carefully and submit to any test you like.

We want everyone who is not posted on Amatite, to write for a sample and test it for himself.

This is the best possible way to convince yourself of its qualities—its superiority over anything else you have used or know of—its toughness, its durability, its weather-resisting qualities, its fire-retardant properties, and innumerable other good points fully ex-

plained in Booklet. AMATITE ROOFING represents progress—progress over the old-slow-shingle-laying days—progress over the unreliable tin—progress over the customary "paint and repair" items which need to be taken into consideration where most ready roofings are used.

AMATITE appeals to progressive people all over the land.

We want you to know about it. Send your name and address and we will send you an illustrated booklet and Free Sample at once.

MODEL INCUBATORS —AND— BROODERS

I can help you make a success in the poultry business, whether it's a hundred hens for your own table supply or fifty thousand layers for large commercial purposes. My experience has been so broad, so varied; I have "come up against" all the "ins and outs" of hatching, brooding, feeding and marketing of poultry that many say I am an authority on profitable poultry-raising. As a proof, my Model Poultry Farm was a profitable success in six months. I now have poultry there numbering

80,000, Hatched and Brooded

in my famous Model Incubators and Brooders. Buying your incubators and brooders of a man who knows nothing—or very little—about hatching and raising poultry is running a useless risk. Don't do it. I not only sell you a Model Incubator or Brooder but I add to them the valuable experience of years as shown in their construction. Model Incubators show excellent hatches—hatch every hatchable egg. The Model Brooders grow sturdy chicks. Remember, my interest in you doesn't cease when I ship you a machine and get the money. You buy a part of my time and are cordially urged to write me and ask all the questions you wish. I'll stay by you. Send your order today and get in line with the profit-getters. Free catalog for everyone.

spoons of baking powder, flavoring to taste. This is a good foundation cake for any kind of filling, and can be varied by adding fruits, spices, etc. It makes a very white cake.

Mrs. B. J. C., of Burlington, Iowa, writes: "As the grape season is at hand perhaps some of the readers of this department would like to do a little experimenting with some new recipes. My family are especially fond of my grape apple butter. I use half grapes and half apples, cooking them separately until done. I then rub them through a sieve and cook them down together until thick, over a very slow fire, sweetening to taste. For grape jam I pulp the fruit, cooking the pulp in an agate kettle. When it reaches the boiling point I press it through a coarse sieve, add the skins and a pound of sugar for every quart of the fruit. Let it cook slowly for about half an hour. Grape catsup makes a very fine relish with meats. For this pulp the grapes, stew the pulps until soft enough to put through a strainer and remove the seeds. For every five pounds add four pounds of brown sugar, a pint of vinegar, three tablespoonfuls of ground cloves, two of ground cinnamon and salt to taste. Cook down until quite thick. Lastly, here is my recipe for grape jelly. Pick the grapes from the stems, wash them and place over the fire in a kettle with enough water to keep them from burning. Stew a few minutes, crush with a silver spoon (never use anything except a silver spoon in stirring fruits), strain in a jelly bag over night. In the morning weigh a pound of sugar for every pint of juice, heat the sugar, add it when the juice comes to the boiling point. Let it boil a few minutes until it jells, when a little is tried in a saucer, then fill the jelly glasses."

FRUITS IN THEIR SEASON.

Plum conserve is delicious as a relish with meats. To five pounds of stoned plums add five pounds of sugar, two oranges, skins and all, cut in tiny bits, and one pound of seeded raisins. Cook in a granite kettle until it begins to thicken, take from the fire, add a pound of walnut or pecan meats, broken fine, and put in jelly glasses.

Plum Roll Cake.—Cook plums and press through a coarse sieve or vegetable press and sweeten to taste. Make a cake, using any good roll jelly cake recipe. Spread it while warm with the plum jam, roll it and serve hot, with a pudding sauce, as dessert, or cold as a cake. If used for a pudding make a sauce by bubbling together one rounding teaspoonful of butter and one of flour. Add half a cup of sugar and a pint of hot plum juice or plum juice and water.

Every one has their pet recipes for canning and pickling peaches. Here are three excellent ways of preparing fresh peaches for the table:

Peach Foam.—Pare and mash to a pulp required amount of peaches. Whip half a pint of cream, add one cup pulverized sugar. Arrange peaches in glass dish, cover with the cream and set on the ice to chill. Strew chopped almonds over the top of cream before serving.

Baked Peaches.—Clingstones are the best for this method of cooking. Wipe the fruit with a flannel or soft cloth

THE AWL FOR ALL

and pack them into a stone jar, filling about two-thirds full, scattering a little sugar among them. Then cover with cold water and place the jar in the oven, baking the peaches slowly until they are tender and transparent, but not broken. It will require from two to three hours, according to size of peaches. These are delicious, as this method retains their flavor well.

Peach Pudding.—Pare and slice six ripe peaches; add to them one pint of sweet milk, one-half cupful of bread crumbs, two-thirds cupful of sugar, three eggs, yolks and whites beaten separately, a pinch of salt, and one-half teaspoonful each of cinnamon and nutmeg. Stir all together, then turn into a buttered pudding dish and bake till set. Serve hot with hard sauce or cold with sweetened cream.

Pear Chips.—Slice pears very thin with a vegetable slicer, or cut them with a silver knife into small chips and boil in clear water for ten minutes. Drain, add sugar, pound for pound, and cook slowly until the pears are transparent, adding for flavoring either bits of candied ginger, thinly sliced lemon, or a little bag of pounded ginger root. Cook down into a thick conserve.

Candied Watermelon Rind.—This is a favorite Chinese sweetmeat and is prepared as follows: Pare the green rind off as usual, and cut into pieces about one or one and a half inches square. Cook in alum water until tender, then drain. Make a thick sirup and cook the melon in it until the pieces are clear and the sirup very thick. Now spread on buttered plates and partially dry in the sun or oven. Sprinkle with granulated sugar on each side and drop two or three drops of Jamaica ginger on each piece. Dry again until you can handle without the pieces sticking to your fingers, then pack in tin boxes like crystallized ginger.

HELPS IN THE HOUSEWORK.

It is economy of time, strength and fuel to mangle the towels, pillow cases, sheets and all flat pieces by running them through the wringer after tightening the rollers. They will look almost as well as though ironed and will feel smooth to the touch.

When bottling pickles or catsup boil the corks, press them into the bottles while hot and dip them into melted paraffin. The bottles will be absolutely air tight.

A strip of table oil cloth tacked back of the kitchen sink, the table where cooking preparations are carried on and the stove will save much labor in cleaning walls.

Paint gilt frames with water in which onions have boiled and flies will keep away from them.

A little bag of sulphur in a cupboard or drawer will keep away red ants. Be careful, however, not to put silver near it or it will turn black.

QUICKLY PREPARED EGGS.

Eggs and Celery.—The yolks of hard boiled eggs chopped fine with celery make a delicious change for a supper dish. Make a cream sauce well seasoned and mix with eggs and celery. Pour over pieces of buttered toast. Garnish with whites of eggs cut in rings and some green celery leaves.

PUT YOUR MONEY IN A GOOD ROOF

"Vulcanite" is that Roofing

ON IT'S MERITS

STRONG DURABLE

Vulcanite ROOFING

long ago won for itself the reputation of being the Best Ready Roofing known. Realizing the value of this reputation, we have always endeavored to maintain it, not only by keeping strictly up to the original high standard, but by constantly striving to improve it in every possible way. Requires no annual painting. Samples and "Roll of Information" FREE.

Patent Vulcanite Roofing Co., Dept. 29, Franklin, Warren Co., O. or 626-59 S. Campbell Ave., Chicago

Beauregard Egg Toast.—Carefully separate the yolks from the whites of six hard boiled eggs. Chop them each fine. Heat one cup of milk, add one teaspoonful of butter, a few sprigs of parsley, salt and pepper. Thicken slightly, then stir in the chopped whites of eggs. Have ready six slices of bread nicely toasted, put yolks on them, pour over sauces and serve hot.

Eggs with Tomato.—Heat one and one-half cups of tomato that has been stewed and strained, add a pinch of soda, and salt and pepper to taste. Rub a rounding teaspoon of butter into two rounding teaspoons of flour, and add to the hot tomato. Cook well; then scramble half a dozen eggs and turn on to a platter; pour the tomato sauce round and serve.

Egg Fondue.—Beat six eggs lightly, add salt, pepper and five tablespoons very finely chopped cheese. Melt one

The monarch of Anconas, King Edward. Has never been beaten. Has won first prize at several of the world's greatest shows, including Dairy Show, London, England. Owned by Famous Poultry Farm, Berea, Ohio.

tablespoon butter in a saucepan, turn in egg with cheese and stir until eggs are of jelly-like consistency. Serve immediately on squares of hot buttered toast on a dish garnished with yellow nasturtiums and a few green leaves.

A New Breakfast Dish.—Allow for each egg two tablespoonfuls of sweet milk, warm it, add a bit of butter the size of a walnut and a little salt and pepper. When nearly to the boiling point, drop in the eggs, broken one at a time in a saucer. With a thin-bladed knife gently cut the eggs, and carefully scrape up the mixture from the bottom of the cooking vessel.

CONGO THE NEVER-LEAK ROOFING

STOP THAT LEAK

THE rain will damage the contents of the building and ruin the building itself.

A leak in the roof, no matter how small, is a leak in your purse.

The best way to make repairs is to cover the old roof with a new roof of Congo.

Congo is easily laid over shingles, or tin, or other ready roofings.

Figure up the cost and you will be astonished how cheaply and easily you can get a tight, durable, weatherproof Congo roof. Nails and cement furnished free.

Watch closely that it does not harden. Remove from the fire before quite done, turn up from the bottom of the dish a moment longer; serve at once in a hot dish. When properly cooked the mixture will be in large flakes of yellow and white and as delicate as baked custard.

Foam Omelet.—Three eggs, whites beaten separately to perfect stiffness. Mix one-third of this with the beaten yolks, and a quarter of a teaspoonful of salt and a dash of white pepper if liked. Pour the mixture into a saucer-pan over the fire, in which is half a spoonful of hot butter, making the omelet about the size of a breakfast plate. Immediately spread the whites over this. Watch the cooking, lifting the edges with a case knife, and when the bottom is lightly browned set the pan in a hot oven a minute or so. Fold and serve. Properly made it will have puffed to a thickness of some four inches.

THE ROOFING QUESTION.

Every day the roofing question is becoming more serious to the farmer. Shingles are getting scarce and expensive, while the quality is getting poorer. Metal is too costly and requires repainting yearly or it will rust and leak.

What then shall the farmer use? There is but one answer—a good, ready prepared roofing. "Vulcanite" Ready Roofing meets the requirements—makes a better roof than either shingles or tin—lasts longer and does not require annual painting.

LUMBERMEN'S TRUST ACTIVE.

The lumbermen's trust seems to be active
just now in trying to wreck the Gordon
Van Tine Company's business. As many
of our readers know, this company manu-
factures mill work, doors, windows, mould-
ings, flooring, roofing, parlors, etc., and
sells these articles direct to farmers, em-
ploying no agents or middlemen, but giving
the buyer the profits that usually go to
lumber yards, blind and sash factories,
etc. They are doing an enormous business,
because they make first class goods and
sell them cheaper than lumber dealers can,
consequently the lumbermen's trust is anx-
ious to put them out of business and have
resorted to all kinds of unfair methods
to do so, but without avail.

The Gordon Van Tine Company is a big
strong concern and will be able to hold
their own because the people know when
they get good building material at less
than they can buy the same from dealers
and they are going to continue to stick to
the firm that has stuck to them and saved
them money. A trust that attempts to
build up its own business by tearing down
that of an honorable competitor will get no
sympathy from farmers, if we know this
latter class of people.

As time goes on and the poultry indus-
try grows, the part which railways play
in the poultry industry increases in im-
portance. Not only the shipment of com-
mercial poultry by freight and the shipment
of fancy breeding stock by express, but
also in transporting poultrymen to and

movement of the train all the way to Bu-
falo.

The train ran smoothly over as fine a
piece of ballasted track as the writer has
ever had the good fortune to ride over.
The delicious coffee, brimming the cup of
joy in the dining car, without stopping
over. It is hard not to stop over when
speaking of the Grand Trunk, for the road
was clean, free from dust and punctuality
to schedule was maintained at every point.

Now then comes the lesson: The Grand
Trunk system in common with our other
American railroads has been systematically
improved during the past ten years beyond
a standard of easy comprehension and the
improvement in service in the passenger
equipment is duplicated in proper propor-
tion to the handling of poultry in "the
baggage car ahead"—the crates of market
stuff, the snowy crates of exhibition birds
are loaded into cars which show as great
improvement in strength, size and modern
safety appliances as the following passen-
ger equipment. Isn't this improved condi-
tion of things sufficient to make a sensi-
ble man "sit up and take notice" and take
a band, too, in the battle waged on the
railroads? Isn't this one instance of the
Grand Trunk sufficient to cause a true
American to protest against a continuation
of national animosity shown the railroads?

Charles Staaff, Box 125, Peapack, N. J.,
reports that he has 200 cockerel bred pullets
and cockerels from March and April hatch-
ing. All from sons from first cock and
brothers to first cockerel at Madison Square
Garden. Mr. Staaff has not been breeding

New Poultry Building at the Minnesota State Fair Grounds.

from markets, shows and association meet-
ings is dependent upon the railways. The
editor of this paper therefore wishes to
impress upon his readers the present im-
portance of going now, in the present im-
pact against the railways, believing that
when railroads fight the poultrymen and
the poultrymen fight the railroads, the best
conditions can not be secured. But when
we meet on common ground and work to
common interest and all pull on one "tug"
we can move giant loads. Co-operation
solves the vexed questions that legislative
bodies have failed to settle. Progress in
any line can be best secured through co-
operation and united efforts.

We desire for a moment to specialize and
draw particular attention to one railroad
that has merely come under our observa-
tion—namely the Grand Trunk system—for
the purpose of illustrating what progress
has been made by railroads brought up to
date and the very superior advantages
given to poultrymen served by its lines—
and without any extra charge but rather by
a considerable decrease in rates heretofore
in effect. This close inspection of the
Grand Trunk was made last month when
the writer took the through train from Chi-
cago to Toronto, Hamilton, Buffalo, Mon-
treal, Philadelphia, New York and Boston,
being put off at Buffalo for the annual
meeting of the American Poultry Associa-
tion. Boarding the train at the Dearborn
station in Chicago, he was assisted to his
assignment in the through Pullman sleep-
ing car by a handy "red-cap porter." The
train's passage through the Chicago yards
was controlled by automatic block signals
and these safety devices were also found
out on the main line and guarded the

Barred Plymouth Rocks as long as some of
the other noted breeders in the East, still
he has produced some very choice birds dur-
ing the past few years and we have no
doubt that out of the 200 birds that he
reports now on hand, there will be a num-
ber that will be heard from at the leading
shows the coming winter. Any of our
readers who are looking for something for
the early fall or winter shows should get
in communication with Mr. Staaff and get
his prices on what they desire. Please
mention American Poultry Journal when
writing him.

Bradley Bros., Lee, Mass., the noted
breeders of Barred Plymouth Rocks, re-
port that their egg trade the past season
was the largest they ever had. Had sales
for breeding stock away beyond their expec-
tations. They recently shipped two males
at \$300 each and just received another or-
der for export. This time two trios to
Russia. They report a large lot of fine
young stock coming along very nicely, many
of which will be ready for the early fall
shows. They also have 400 old fowls now
for sale. Any one looking for something
choice in Barred Rocks should surely find
what they desire on the farm of Bradley
Brothers. Do not forget to mention Amer-
ican Poultry Journal when you write them.

Mrs. J. H. Orelangh, Batavia, Ohio, pro-
prietor of the Phoenix Poultry Plant, has
sold out and wishes to call attention to her
new advertisement in another column of
this issue. If you are looking for bargains
in White Plymouth Rocks, this is your
chance.

FOUR DREADED POULTRY AILMENTS.

There are certain ailments of poultry that every fancier must be prepared to treat. These are common to every flock. The most common of all is the dreaded roup. It is closely related to the colds and catarrh of the human family, but the roup with young chicks is a fatal disease.

Cholera and gapes are two other diseases, which levy frightful tribute on young chicks. Base as the ravages of these diseases are, they are in reality easily controlled if the right remedies are applied.

The G. E. Conkey Company of Cleveland, Ohio, accomplished a world of good for poultry raisers when they perfected their roup cure, cholera cure and gape cure. They are saving the lives of millions of chicks every year. Because of their efficiency in the cure of these diseases, they have become as necessary to the successful poultryman as the most up-to-date incubating and brooding appliances now generally in use.

The Conkey Lice Powder is another remedy also indispensable. It is sure death to lice. Many lice killers merely sicken and stun the lice, leaving them to revive and prey on chicks. The Conkey powder kills absolutely on contact and does not injure chicks or fowls. A liberal sample will be

to thirty-eight questions divided into six symposiums. The work consists of 176 pages (9x12) and is profusely illustrated, including one color plate. The twelve chapters are: American Poultry Industry, Value of Standard Breeds, Starting in the Business, The Poultry Plant, Leading Standard Varieties, The Mature Fowls, Incubation and Brooding, Successful Chick Growing, Roasters, Broilers and Capons, Market Poultry and Eggs, Turkeys, Ducks and Geese, Prevention of Poultry Diseases.

The price of this valuable book is \$1 postpaid. Send us your order and it will be filled promptly. Address American Poultry Journal Publishing Company, 113 South Clinton street, Chicago, Ill.

A ROOFING THAT NEEDS NO PAINT.

Until within a few years every kind of roofing has been of a nature that it had to be painted just as regularly as the wooden side walls of a house or barn, in fact, painting was required much oftener than on the side walls because of the greater exposure of the roofs.

The necessity for frequent painting has been the greatest objection to these roofings, and we are glad to note that manufacturers have realized this fact and that the mineral surface is coming rapidly into vogue. The mineral surface such as is

sent for trial, to any one writing for it. See ad elsewhere in this paper for correct address when writing.

ABOUT CAPONIZING.

Those interested in the subject of caponizing will do well to send to George P. Pilling & Son Co. for one of their complete guides on the operation. This is a book of 48 pages, which not only contains general information regarding capons, but also shows a series of illustrations, each step and the best method of procedure in caponizing. This valuable little book will be sent free to any of our readers who may contemplate doing something in that branch of the poultry industry. The address is Arch street, Philadelphia, Pa.

SUCCESSFUL POULTRY KEEPING.

We have had occasion to examine the great modern work, entitled "Successful Poultry Keeping," recently completed by the Reliable Poultry Journal Publishing Company, Quincy, Ill., and consider it the most reliable treatise on all branches of the poultry business that has been published in America. It presents the mating plans, methods of hatching and rearing chicks and styles of poultry houses and appliances used and preferred by seventy-three of America's foremost poultry raisers. The information is given in the form of answers

used on Amatite advertised elsewhere in our columns makes painting or coating of any kind entirely unnecessary, and, in fact, impossible.

When an Amatite roofing is laid, it needs no further attention for many years.

Any reader of this paper can obtain a Free Sample showing the mineral surface, by writing to the manufacturers at their nearest office. Address the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Cincinnati.

In this issue we present to our readers a picture of the residence of Mr. T. Cadwallader, Salem, Ohio, the well-known manufacturer of leg bands. The factory is located in the rear of the residence, where Mr. Cadwallader has manufactured leg bands for the past 14 years. His trade extends to all parts of the United States and into many foreign countries. Leg bands are a necessity in the poultry breeding business today, and our readers should not overlook Mr. Cadwallader when in the market for anything in his line.

James Workman, French Village, Ill., can supply you with White Wyandottes that are bound to win.

Meet F. W. Niesman, Freeport, Ill., at the State Fair. He will have 57 varieties on exhibition.

Cousins Standard Incubator

Has Chick Saving, Labor Saving
**COUSINS AUTOMATIC
EGG-TURNING TRAYS**

Even if you are not going to buy your new incubator just now, there could be no better time to get the catalogue that tells all about the Cousins Standard Incubator, how it's made and why it is best. At all the big poultry shows in the season past, the Cousins was the incubator sensation. Experienced, successful poultry raisers say it is the climax of development in incubator manufacture, ranking in a class all by itself. Reports from users confirm this. Uniformly it gives best results.

OUR EXCLUSIVE PATENTED FEATURES

give the Cousins Incubator undeniable superiority—automatic and absolutely even distribution of heat, with one-half the usual amount of fuel; perfect ventilation and moisture system; no cold air draughts; chick drawer, through which the chickens are removed without opening the egg chamber; greatest durability; handsome appearance; and the Cousins Automatic Egg-Turning Tray, which saves work and time, saves the chicks and insures biggest hatches. Write today for our illustrated book. It tells all about the egg-turning tray. Address

The Cousins Inc. Co., 108 Woodard Bldg., Warren, Pa

Poultry Show Dates for '07-8

Jan. 20-25—Waterloo, Iowa; A. B. Shaner, judge; C. J. Schneck, secretary.

ONE OF THOSE "WRECKED" RAILROADS.

I left Chicago at 2:45 today on the eighteen hour train, having some important business in New York at the home office. I went on a very hurried notice and will return by Saturday.

I don't know whether you have ever ridden on this train, but it is a magnificent one and can easily go from 75 to 80 miles an hour without apparent effort. I think it is the finest train in the world, with the exception of the Alton limited.

The above is an extract from a letter received by a professional man in Burlington yesterday from a friend enroute from Chicago to New York. The statement concerning the Alton train will be astonishing to those who have been convinced by newspapers and political orators that E. H. Harriman had completely wrecked that railroad with his stock juggling. They will be surprised to learn that after all said and done, the Alton system is one of the best managed, finest equipped and most delightful railroads to travel on in the world, and that the cost of riding in its luxurious coaches is no greater than on any other railroad and that it carries freight as rea-

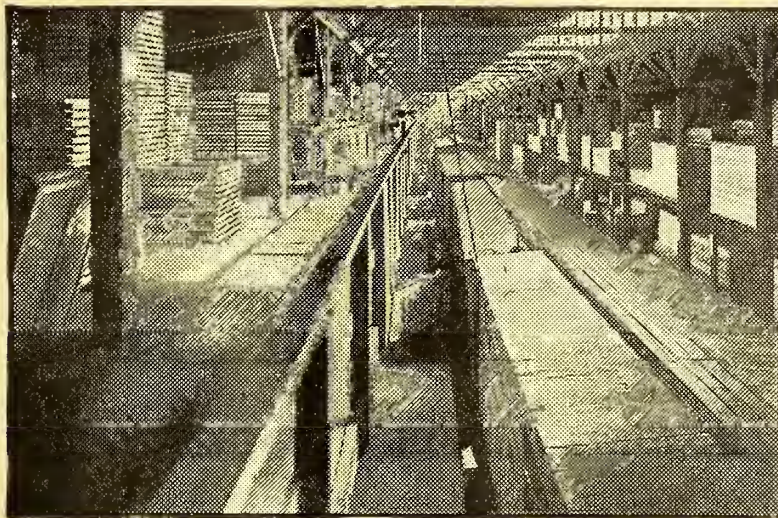

sonably as any other of the big systems. And, after all, that is about all that is of any particular interest to the patrons of a railroad and the public in general.

Should, however, the Alton be compelled by adverse legislation to reduce the high standard of its service there would be reason for the public to complain that some one was wrecking the road. And it is just possible that the disgusted travelers would be inclined to lay the blame at the door of the so-called "reformers."

From the Burlington, Ia., "Hawk-Eye," June 13, 1907.

Otto Barth, formerly manager of the Sure Hatch Incubator Company, has resigned his position with this concern, to become part owner and manager of the Pinkerton Manufacturing Company, Lincoln, Neb., manufacturers of the Queen Incubator and Brooder. Mr. Barth is recognized authority on incubator and brooder building and the use of such machines for profitable poultry raising. We wish him every success in his new undertaking.

Charles Howison, Box 463, Sandwich, Ill., can supply you with Buff Wyandottes that will win.

LOADING BUILDING MATERIAL AT GORDON, VAN TINE & CO.'S GREAT FACTORY.

The Gordon, Van Tine & Co. business has created national interest because they sell by mail only, from an enormous catalogue that quotes over 5,000 bargains in all kinds of building material, and because they are revolutionizing the conditions of building material selling.

Out in Iowa, where this concern has its headquarters, the situation is becoming so interesting that Senator Kittredge, a South Dakota congressman, quoted, and very highly praised Gordon, Van Tine & Co. in an attack upon the trust methods existing today in the lumber business. The Des Moines Capital, one of the leading dailies of Iowa, in its issue of February 14, said:

"Gordon, Van Tine & Co. entered the field of selling direct to the consumer with the announcement that the prices charged by the retail lumbermen for mill work are absolutely all wrong; that the margin of profit is entirely unwarranted; that the slowness with which the retailer serves the consumer is all wrong; and they are backing it up by offering right straight through the highest grade of mill work at half dealers' prices or less. Further, they ship promptly and have won the praises of builders all over the United States by the manner in which they facilitate prompt execution of building contracts. The day of being held up in the middle of a building job because material can not be secured is over for the people who will buy direct from Gordon, Van Tine & Co."

This states the question exactly. The slogan of Gordon, Van Tine & Co. is high quality, low prices, prompt shipments, everyone treated exactly alike.

For the small buyer, Gordon, Van Tine & Co.'s prices are particularly attractive because it enables the small buyer to hold his own and get what is justly his, a fair figure on building material. The large

buyer finds that he can get a car order executed as promptly as an order for a single piece because of the enormous stocks from which this concern is able to ship.

A representative of this publication investigated Gordon, Van Tine & Co.'s plant the other day and finds a remarkable system for handling business, and the invitation which the editor accepted was and is made broadcast to the carpenters, contractors and builders of the United States. Their factory is open to everyone genuinely interested in finding out about qualities, style of goods, etc. We find that an entire train of cars is backed into the shipping room of Gordon, Van Tine & Co. and that cars are loaded from both sides at one time and as fast as loaded the ever-ready switch engine removes them and makes room for more. We found one fact that will be of particular interest to the readers of this publication, and that is, scarcely a day passes when orders are held over. That is certainly assurance of promptness, and as the Des Moines Capital says, the day of being held up in the middle of a building job because material can not be secured is over for the people who will buy direct of Gordon, Van Tine & Co.

The new catalogue just issued by this firm quotes about 5,000 prices and illustrates nearly every item. The figures demonstrate beyond all doubt that 50 percent saving is actually made on the prices quoted by dealers, and the array of goods that are ordinarily made only to order, but which are carried in stock by Gordon, Van Tine & Co. is a delight to the man who has been held up waiting for special orders.

Gordon, Van Tine & Co.'s goods are up to the standard adopted by the sash and door manufacturers of the Northwest. Better products can not be turned out, and they are well warranted in making their guarantee because the entire process of timber selection, seasoning, and final manufacture is carried on under their own supervision. They own their own timber lands and millwork factories.

John A. Flick, Box A, Ravenna, Ohio

MONEY MAKING Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. Haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first four weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND Poultry Foods

take the lead with successful poultry-raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall—it makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected," are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

"White Frost" Strain White Wyandottes

New Jersey's Leading Strain. Our winnings of last year place us in about the front rank; the 41 prizes which our birds captured should cause their offspring to be looked upon with favor. Whites. We have over 700 chicks. They show great quality and all who are interested in these birds should come and look them over. Our sale of breeders, including a number of last year's prize winners, is now on, and we can furnish pens, trios, single specimens or birds in large quantities that will give satisfaction. Those who come first will have the first choice. Visitors are welcome whether they desire to purchase or not; we are anxious to show our plant. Columbians. We would also be glad to show our Columbian Wyandotte chicks. Buff Cochins Bantams. We have been particularly successful with these birds this season, and have some nice chicks and breeders for sale. We fully expect to add to our list of ribbons in this variety during the coming show season.

CHARLES D. CLEVELAND, Sunny Brook Farm, West Orange, N. J. Member National White Wyandotte Club, American W. Wyandotte Club, Nat'l. Columbian Wyandotte Club.

MONEY PLANTED WITH ME GROWS

Catalogue Free.

The Ohio Hatchery & Mfg. Co. Box 30 - Bellevue, Ohio

Buff Wyandottes

BARGAIN. One cock and three hens from 1907 breeding yards for \$10. Worth double the money. Best strain in the world. Must sell quick to make room for growing stock.

W. R. Wooden, Battle Creek, Mich.

THE OIL THAT'S RIGHT

Is the only kind you should use in your incubators and brooders. Many chicks are killed by the deadly fumes from ill-smelling, gummed-up, smoky lamps.

WYANDOT WHITE OIL

is refined by special process, goes through the wick without clogging and burns with a steady flame preserving even temperature. Write for free circular and price.

THE WYANDOT REFINING CO. Dept. A. Cleveland, O.

STEINMESCH'S EARLY BREAKFAST Mash

"Something New" Try it and if you like it Buy it. Sample Free

Every authority on poultry recommends a morning mash for poultry, especially during the fall and winter months. Our Mash is made up of the very choicest. Winter Wheat Bran, and Middlings, Crushed Oats, Linseed Meal, Bone and Beef Meal, Clover Meal, Charcoal, etc. Nothing better for growing and adult fowls; will push the young stock to quick maturity, will help adults through the moult, insuring health and vigor for both. The greatest egg producer ever offered.

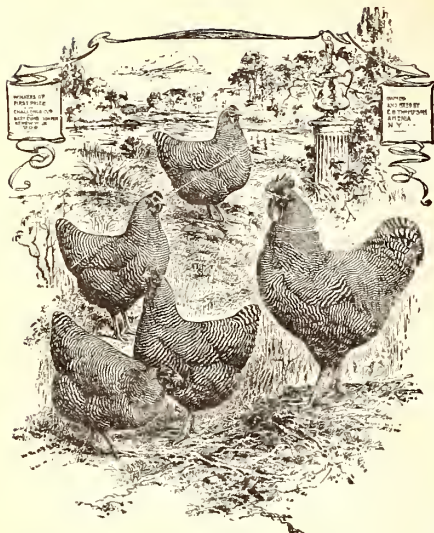

A Forcing Feed, A Fattening Feed, A Conditioning Feed

All in one—simply regulate the quantity fed. Price, \$2.00 for 100 lbs. \$1.25 for 50 lbs. We pay freight on 200 lbs. and over to all parts of the U. S.

STEINMESCH FEED & POULTRY SUPPLY COMPANY, 301 Market St., St. Louis, Mo. Wholesale and Retail.

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

VOL. 38

OCTOBER 1907

NO. 10

AMERICAN POULTRY JOURNAL

At The New York State Fair

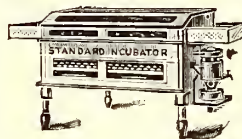

Syracuse, Sept. 9 to 14, 1907, we again established the fact that we have the stock that can win anywhere. In Barred P. Rocks we won 1st cock bird, 1st pullet, 3d cockerel, 2d young pen and 2d old pen. In the S. C. White Leghorn class we won 2d cockerel, 3d pullet, 2d young pen, 3d old pen and 5th cock bird. We still have some of our breeders left from which this stock was bred, and are for sale at very low prices, in order to make room for our young stock, which is the finest we have ever raised. Send for particulars.

1907 CHICAGO WINNERS

We won on S. C. Buffs 1st, 2d cock, 2d, 3d chl., 2d, 3d pul., 2d, 3d hen, 1st pen, silver cup best display, silver cup best colored male, silver cup best colored female; all firsts on R. C. Buffs. On our S. & R. C. Blacks and Whites we won 10 firsts and 8 seconds. 1907 egg circular tree.

J. M. WILLIAMS & CO.

Box B, No. Adams, Michigan

**World's Foremost
White Wyandottes**

Have won the very highest honors at New York, World's Fair, Boston and other leading shows; have sold winners for all the prominent shows in U. S. and Canada; many owe their success to my strain. 15 years line bred for vigor as well as fancy points. REMEMBER, all stock returned at my expense if not satisfactory. I have some grand early birds. I am breeding Columbian Wyandottes on same lines as the White Wyandottes.

J. H. JACKSON - Lock Box 88 - HUDSON, MASS

S. C. W. Leghorns

A fine lot of exhibition birds for sale; pullets, cockerels and yearling hens. Remember, my stock wins the blue ribbons wherever shown. If you want to win at the fall and winter shows place your order with

W. L. FERN - ELGIN, ILLS.

The Best Trap Nest Made

is the **ACME**, because it does not frighten the hens that use it. Remember that the hens do not have to be COAXED or TRAINED to use the Acme, because all that is required of the hen is to walk into the Acme like she would to use any box or barrel nest. It is simple in construction, easy to operate, safe, roomy and comfortable. It is well ventilated and darkened. It never fails to trap the hen, and the weight of the hen when she enters nest throws the trap. No wires to push against, no tilt board, no springs, no pulleys, no weights to get out of order. Your money back if not as represented. Cat. free.

ACME TRAP NEST CO. - BEDFORD, INDIANA

King's Champion Barred Rocks

Clean sweep winners at three recent Ill. State Shows. More good youngsters to offer than ever before. Yearling breeders; show birds, cocks and hens; sure winners. Can please you in any quality you are in need of. Remember, high-class exhibition birds are my specialty. Write me what you are in need of for your show. Testimonial sheet and show record free.

O. L. King - Walnut Grove, Illinois

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan 1st Cnp for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.

Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Pembroke, Maine

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$3 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50.

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, manual and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains. If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

If you want a larger machine write for our 80-page "Victor Book"

GOLD IN THE GRIT BAG

Here is what the miner would call "pay dirt" for it will put money in the poultryman's pocket. It's nature's own product made from the natural rock and ground to the proper sizes for feeding all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's
system and assist the digestive and egg-making organs in the
production of eggs and vigorous growth. Turkeys, ducks, chick-
ens, geese, little chicks and pigeons thrive on it. Its a most eco-
nomical and profitable grit; just what you are looking for, 50 and
100 lb. bags. Car load lots if desired. Send for free sample. Agents
wanted.

PARIS FASHIONS

For Readers of

American Poultry Journal

The American Poultry Journal will supply its readers with perfect fitting, seam allowing patterns from the latest New York and Paris designs, at the low price of 10c for each pattern. Full directions how to cut and how to make with each pattern. Our large book of Paris fashions—80 pages—containing the illustrations and descriptions of 1000 seasonable styles for ladies, misses and children costs 5c for postage alone—we sell it to our readers at 10c, postage paid by us, in order that they may have a reliable guide to fashions.

A Pattern Free. Free Fashion Book

Get us just one new subscriber to American Poultry Journal at 50c for the year, and we will send you free any of these patterns and our large fashion book.

STYLE A.

No. 2024.—Ladies' Tucked Shirtwaist, with long or three-quarter length sleeves. Any of the thin woolen materials, such as challis, cashmere, albatross or mohair, would serve very well for development. Seven sizes, 32 to 44.

No. 2031.—Misses' Yoke Waist, with high or low neck, long or three-quarter length sleeves, and with or without suspender hertha. This model could be made appropriately in a lingerie style with white embroidery or lace and would be very beautiful. Three sizes, 13 to 17 years.

No. 2029.—Girls' Jumper Dress, with plaited skirt and a separate guimpe. Mohair, brilliantine, any of the bright wool plaids, challis or cashmere would be suitable for development. Four sizes, 6 to 12 years.

No. 2038.—Ladies' Five-Gored Skirt, with side plaits at top and tucks at lower part. It is a model that is simple and easy to make and would find its best development in chiffon broadcloth, or sicilienne, or serge. Six sizes, 22 to 32.

No. 2047.—Girls' and Child's One-Piece Apron. This little apron is the acme of simplicity and can be developed in all white in plain and cross-barred material, or in percale, gingham and oilcloth. Six sizes, 2 to 12 years.

No. 2010.—Ladies' Eton Jacket, with three-quarter length sleeves, in mole-colored broadcloth, the collar and cuffs inlaid with hussar blue velvet and fastened with silk frogs to match. Seven sizes, 32 to 44.

No. 2042.—Ladies' Mother Hubbard Apron, with high or low neck and long sleeves or oversleeves. For household work or for artists this pattern is a boom and is indispensable to the worker. Four sizes, 32, 36, 40 and 44.

No. 2023.—Misses' One-Piece Kimono Jumper, in lizard-green messaline, trimmed with bands of wide velvet ribbon. Three sizes, 13 to 17 years.

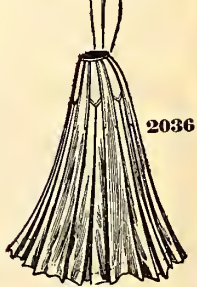

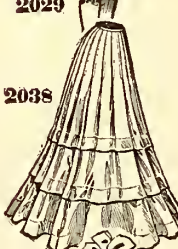

No. 2017.—Misses' Shirtwaist, in light gray liberty silk, stitched in red. Three sizes, 13 to 17 years.

No. 2015.—Girls' Dress, in pink pique, the novel shaped yoke trimmed with white braid. Four sizes, 6 to 12 years.

No. 2036.—Ladies' Thirteen-Gored Plaited Skirt. This beautiful gored model has lengthwise box plaits alternating with panels that have pointed tabs overlapping inverted plaits. Six sizes, 22 to 32.

No. 2003.—Ladies' Blouse Dressing Sack, with peplum and three-quarter length sleeves. This is a compromise between a shirtwaist and a negligee and is appropriate for morning wear, developed in silk or flannel. Seven sizes, 32 to 44.

No. 2016.—Ladies' Princess Jumper Dress, in sweep or round length. Made in peau de soie, faille, taffetas or messaline, and worn over a lace guimpe this model is exquisite. Seven sizes, 32 to 44.

Merchandise from Sheriffs' and Receivers' Sales.

THE CHICAGO HOUSE WRECKING COMPANY saves you 30 to 50 per cent on staple merchandise from **Sheriffs' and Receivers' Sales**. Wrecking Prices have come to be known as **bargain prices**. Here you have the most wonderful bargain offering ever advertised. Such an opportunity seldom occurs. The very best manufactured articles offered at less than original cost of production. That's our merchandising method. We do not buy our goods in the regular way, but take advantage of various sales to secure bargains. **Our mammoth plant is the largest in the world devoted to the sale of general stocks**. Increasing business has necessitated an addition to our already enormous institution. Over 35 acres literally covered with merchandise of every description.

We built our enormous business by giving our Customers Absolute Satisfaction

LUMBER!

Send your lumber bill for our estimate. We offer the most wonderful opportunity to purchase **Lumber and Building Supplies**. We furnish absolutely everything necessary for construction purposes. We bought 50,000,000 feet of lumber and finishing material from Manufacturers' sales. We invite you to inspect our stock. We guarantee satisfaction. On application we will send you copies of letters from customers who have bought from us. **THEY SAVED MONEY; so can you.**

Doctor Leather Couch, \$14.00

\$50 bought from Manufacturers' Sale; full continuous roll, diamond tufted top. Best quality hair filled over durable tow layer. Hand some hand-carved claw-foot frame. Retail value easily \$24.00.

Brass Trimmed Beds, \$6.40

Full-size, strongly built, exactly like illustration. Posts 1-16 inch diam., 67 inch high, trimmed with genuine brass, enameled in either white, pea green or black.

WE PURCHASED EVERY EXPOSITION.

This includes the World's Fairs of Chicago and St. Louis, the Expositions of Buffalo and Omaha, built at a cost of \$90,000,000. We are the foremost dismantlers and purchasers of large institutions in the World. By this means alone millions of dollars worth of the world's best products have passed into our possession and have been rebuilt and sold at 50 per cent below their original value.

The World's Bargain Center.

Thousands of satisfied customers everywhere have learned to recognize the virtue of our business. We stand between you and high prices. The greater part of our stock consists of absolutely brand new, first-class merchandise that we have secured in connection with our purchase of stocks at Sheriffs' and Receivers' Sales. Our enormous warehouses are overflowing with merchandise secured from such sources. Our wonderful growth and expansion is the best evidence of our ability to serve you. Merchandise of the highest quality is sold at sacrifice prices.

Our Guarantee.

We guarantee absolute satisfaction. A satisfied customer means more to us than a large sale. Every article you purchase from us is guaranteed absolutely as represented. If you find it to the contrary, we hold ourselves in readiness to make good our representations. If the goods received are not as represented, we will take them back.

We cheerfully invite investigation as to our responsibility. Our capital stock and surplus is over \$1,000,000. We refer you to any commercial institution in Chicago or anywhere else. Look us up in Dun's or Bradstreet's; ask any Express Company; write to the editor of this or any other paper; if you want any more positive proof, write to our depository, the Drover's Deposit National Bank, Chicago.

DOORS, 60c and up.

10,000 doors and windows, which we will close out at a saving of 40%. At 60 cents we can furnish you an ordinary door, good enough for general purposes. We have a complete list of these doors and windows, which we will mail on application.

Good Quality Linoleum, 38c yd.

Six carloads genuine linoleum bought at Receivers' Sale. Extra heavy; floral and tile patterns; 2 yards wide. Retail price, 45 to 60 cts. and your order today, giving us size of room. Oil cloth, per sq. yd., 17.

SPECIAL THIS MONTH

In addition to Developing Food for hastening the growth of this year's late hatched chickens, and Scratching Food to keep the fowls exercising, you will probably need to use one or more of Cyphers Poultry Remedies. The cold rains of fall and early winter start colds, roup, etc., among fowls exposed to the wet and draught. We sell Poultry Remedies for Colds, Roup, Canker, Chicken-Pox, etc., etc. These are not so-called Cure-All Remedies but Separate Medicines Made Specially for Separate Diseases. Send for our Poultry Medicine and Supply book. It is Free.

Barred Ply. Rocks

Have had great results from my cockerel matings headed by sons and brothers to 1st cock and chl. at N. Y., 1907. Breeding stock, March, April and May hatched—pullets \$2 to \$3, cks. \$3 to \$5. Show birds a matter of correspondence, 200 birds for sale

CHAS. STAAFF :: PEAPACK, N. J.

At Great N. Y. State Fair

1907, we won more points than any other exhibitor on REDS, and my Single Comb cockerel was conceded by all exhibitors to be the best Red ever shown; he was the sensation of the show. My Reds won 15 ribbons, including 3 firsts and 4 seconds. This places my Champion Strain on top.

GEO. W. TRACEY - KINDERHOOK, N. Y.

Partridge Wyandottes

Elegant in shape; beautifully penciled. COLUMBIAN WYANDOTTES; fine hackles, wings and tails like Brahmas; correct shape. LIGHT BRAHMAS; the same old quality that has a world-wide reputation. Stock, both young and old; quality and price right. Won 11 1st and 22d prizes at Iowa State Fair.

Dr. N. E. Mighell, "Oak Bluff," Marshalltown, Iowa

POULTRY IN THE SOUTH

ON THE LINE OF THE ILLINOIS CENTRAL

The Manufacturer's Record, of Baltimore, Md., is authority for the statement that the poultry products of the South for 1906 reached the enormous sum of \$159,000,000. Of nine leading southern products, with one exception, the poultry crop exceeded them all by several million dollars. The adaptability of the south for the successful raising of poultry for northern winter markets has now been demonstrated, and along the line of the Illinois Central, especially at Hammond, La., flourishing farms are thriving with pleasing results. In Tennessee, Mississippi and Louisiana on the Illinois Central and Yazoo & Mississippi Railroads are natural conditions for poultry raising. The splendid shipping facilities of these roads for reaching important markets, both north and south, should also be considered. For further information, together with illustrated circulars quoting statements from prominent poultry dealers of the south, address the undersigned at Manchester, Iowa.

J. F. MERRY, General Immigration Agent, Room 13, Hive Block.

Madison Square Garden

is not a fall fair! Why not think of this when the credit of a winning is given? The quality of stock must be considered.

Duston's White Wyandottes Win

They more than made good at the Garden, winning best display on points, and other winnings. Look them up—it will pay you. It is another peg that shows that today Duston stock is just as good as when all these years past were making possible the world's best flocks. Send four cents in stamps for catalogue.

Arthur G. Duston :: Box 1020, S. Framingham, Mass.

MODEL INCUBATORS AND BROODERS

I can help you make a success in the poultry business, whether it's a hundred hens for your own table-supply or fifty thousand layers for large commercial purposes. My experience has been so broad, so varied; I have "come up against" all the "ins and outs" of hatching, brooding, feeding and marketing of poultry that many say I am an authority on profitable poultry-raising.

As a proof, my Model Poultry Farm was a profitable success in six months. I now have poultry there numbering

80,000, Hatched and Brooded

in my famous Model Incubators and Brooders. Buying your incubators and brooders of a man who knows nothing—or very little—about hatching and raising poultry is running a useless risk. Don't do it. I not only sell you a Model Incubator or Brooder but I add to them the valuable experience of years as shown in their construction. Model Incubators show excellent hatches—hatch every hatchable egg. The Model Brooders grow sturdy chicks. Remember, my interest in you doesn't cease when I ship you a machine and get the money. You buy a part of my time and are cordially urged to write me and ask all the questions you wish. I'll stay by you. Send your order today and get in line with the profit-getters. Free catalog for everyone.

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cups. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N. Y.

WE WIN!

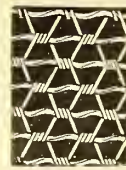

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

LET ME SHOW YOU

How Easy it is to
Build Your Own Incu-
bators and Brooders
with my

FREE PLANS

I want to send you these Plans and Catalog so you can readily see how easy and simple they are. I furnish all parts, such as Lamp, Regulator, Tank, Legs, Doors, Hardware, Etc., not possible for you to make.

I am satisfied the first thing that will occur to many who read this advertisement is that it is impossible for them to build their own machines. Now this is a mistake.

If it were not I would not be in business today; my business would not have grown to be the largest of its kind in the world.

Last year I interested over twenty-five thousand people in my plans and fixtures.

This is certainly good proof that they are what I claim for them, and that any one can build his own machines from these plans and fixtures. I have worked and studied on them until I have made them so simple and easy that a boy 12 years old can follow them successfully. Now, I don't ask you to take my word for this, I want you to see the plans and judge for yourself. All I ask is the privilege of placing in your hands, at my expense, a copy of my Complete Book of Plans and Catalog, Free. I want you to see with your own eyes how completely and clearly every step of the work is pictured out and described.

I want to show you how easy it is to build a high-grade, modern Incubator or Brooder, which will have many exclusive features that are not to be found on any other machines on the market, and all in favor of the inexperienced operator. I want you to see how you can build a machine for less money than the same could be bought for if it were on the market. I want to prove this to you, remember, before you invest a penny, except one cent for a postal, asking me to send my Free Book of Plans and Catalog.

I furnish you in my fixtures all the parts not possible for you to make, such as lamp, regulator, tank, legs, doors, hardware, at a special low cost.

Send Postal Card for Catalog and Plans Today. You'll be surprised how interesting they are. My catalog will tell you all about my proposition, and when you have read it through, and have examined the plans, I am sure you will be convinced that it will be more to your interest to build your own machines than buy them.

Don't buy until you have investigated these plans. It costs only a penny to find out how you can get a better machine, and save

money. If you have an Incubator or Brooder it will pay you to send for my catalog and plans. It contains a complete description of my latest Improved Acme Automatic Lamp and Acme Compound Wafer Regulator, both of which can be attached to any make of incubator or brooder. The Lamp and Regulator, by giving a combined damper and flame regulation, will save you half the oil and labor, and all annoyances so common with ordinary lamps and regulators.

My Improved Lamp holds over 1 gallon, top lifts off like a bucket-cover; is easy to fill. No funnel needed; no spilling of oil; safely filled when operating; can't upset; no danger of fire. My Automatic Valve keeps oil always same height on wick, insuring uniform flame and steady heat.

The combined damper and flame regulation shuts off oil-consumption when heat is not needed—saves oil.

My Acme Burners are air-cooled—can't overheat. No danger of exploding or fire; no smoke; no soot; no odor; can be operated in any part of house.

My Acme Compound Wafer Regulators are sensitive and accurate to a fraction of a degree, are positive in their action, require but one adjustment; flame regulation does the rest. Both my Acme Lamps and Regulator are made to fit any make of machine, and are sold singly or together. Please do not confuse my line with any other. We are manufacturers and originators, and have back of our goods the most complete factory in the world for manufacturing this class of goods.

Investigate our offer. It costs you nothing. Both Catalog and Plans are Free. I know I can save you Money, Time and Labor, and give you better satisfaction. Address,

H. M. SHEER COMPANY, 202 Hampshire Street, QUINCY, ILL.

PRIZE WINNERS FOR SALE CHEAP

By the Great Central Poultry Farm

In eight weeks our birds have won 3000 prizes at state and county fairs. This indicates the quality of our stock. There is no better in the country. As breeders we fully understand our business. We ship nothing but standard birds. They are fully guaranteed and warranted to reach our customers at the nearest express office in good condition. If any fowl fails to do this we duplicate the bird. Eggs in season from all our breeds. We are now booking orders for stock, shipping daily.

We have recently purchased the entire stock of one of the largest breeders of Partridge Cochins in the United States, and we are able to furnish prize winners in this variety. Send for our special prices. We offer the following varieties to our customers:

Light Brahmas,
Dark Brahmas,
Partridge Cochins,
Buff Cochins,
*White Cochins,
*Black Cochins,
Black Langshans,
Barred Plymouth Rocks,
*Pea Comb Barred P. Rocks,
White Plymouth Rocks,
Buff Plymouth Rocks,
*White Face Black Spanish,
*Blue Andalusians,
Black Minorcas,
Rose Comb Black Minorcas,

White Minorcas,
Single Comb Brown Leghorns,
Rose Comb Brown Leghorns,
Single Comb White Leghorns,
Rose Comb White Leghorns,
Buff Leghorns,
*English Red Caps,
Silver Spangled Hamburgs,
American Dominiques,
Black Javas,
Silver Laced Wyandottes,
Golden Laced Wyandottes,
White Wyandottes,
Buff Wyandottes,
*Single Comb Buff Orpingtons,

Buckeye Reds,
Rhode Island Reds,
*Houdans,
*White Crested Black Polish,
Cornish Indian Games,
*White Indian Games,
Black Breasted Red Games,
*Red Pyle Games,
*Buff Cochins Bantams,
*White Cochins Bantams,
*Black African Bantams,
*Golden Sebright Bantams,
*B. B. Red Game Bantams,
*Black Cochins Bantams,
*Partridge Cochins Bantams,

Stock—single birds, \$2.50; pairs, \$4.50; trios, \$6; pens, \$10. Mammoth Pekin Ducks: Stock—single birds, \$2; pairs, \$4; trios, \$6; pens, \$10. Toulouse Geese: Stock—single birds, \$4; pairs, \$7; trios, \$10; pens, \$16. Mammoth Bronze and White Holland Turkeys: Single birds, \$5; pairs, \$9; trios, \$12; pens, \$18. Prices for varieties marked with a star as follows: Single birds, \$4; pairs, \$7; trios, \$10.

Our prices for eggs are as follows: Eggs from all varieties marked with a star, \$2.50 per setting or \$4.50 for two settings. Eggs from all other varieties, \$1.50 per setting; \$2.50 for two settings, with the exception of the following varieties, namely, Partridge Plymouth Rocks, Silver Penciled P. Rocks, Partridge Wyandottes, Silver P. Wyandottes, Columbian Wyandottes, Golden Polish and Silver Polish. Eggs from these birds we will furnish at \$2.50 per setting. We also furnish eggs from White and Pearl Guineas at \$2 per setting of 13 eggs. Of these nine last named varieties we will sell eggs only.

We have thousands of birds bred on the same line as these prize winners. Do not hesitate to order direct from this ad. Send for our special prices, also for our free catalog. Enclose 10c stamp to cover mailing.

Write us for circulars and special prices on our improved Great Central Incubators and Brooders, the most dependable and surest hatch machine on the market. ARE YOU GUILTY?

If you ARE guilty of neglecting your fowls and thus getting no paying results you should not delay a single day in writing us and learning how to keep your poultry successfully and save time labor, feed and money.

1. Of keeping your fowls in quarters which are unsanitary, inconvenient and infested with lice and mites?
2. Of keeping non-layers, loafers and non-payers when you can just as well have all layers in your flock?
3. Of starving some of your fowls, over-feeding others so that they are unhealthy and lay few if any eggs?

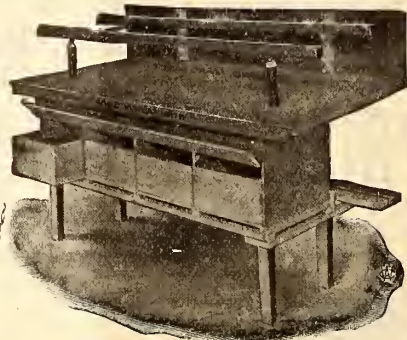

The best yet in a feed hopper. This is the most sensible, satisfactory and serviceable hopper ever made. Hopper feeding is being adopted by poultry raisers all over the country because they can save dollars in feed and much time and labor. The Potter Hopper is made

The Potter System

of selecting laying and non-laying hens is the greatest discovery of the century in the poultry world. It is a secret worth dollars to any poultryman. It teaches you a dozen different ways of making more money on your hens. You can select the layers from the loafers. You can keep the fewer hens and get more eggs at a less cost. If you have some hens to sell before winter sets in you should know the Potter System, for you can pick out the layers and sell the non-layers and thus save many dollars. Over 15,000 poultrymen are using our system, and if you will write asking for our catalog and circulars we will show you that you are losing dollars every day you delay in learning the knowledge we offer. Write us today.

In three sizes with movable partitions for either one or five feed compartments. It is the best and most economical hopper ever made. Send for our circular "Hopper Feeding." The Potter method of scientific and systematic feeding brings paying results. It tells you how to feed from chicks to laying hens; how to prepare a feed costing less than 12 cents a bushel. This feed is the cheapest and best feed known to produce winter eggs and keep your fowls in a healthy condition. Send for free circulars on feeding.

POTTER POULTRY HOUSE FIXTURES

Made in 3 styles, 12 different sizes; over 6 years on the market and over 20,000 in use by poultrymen all over the United States.

DON'T BUILD

that new hen-house or fix up the old one until you have our large 64-pg. catalog showing fixtures in all styles and sizes. POULTRY ADVERTISING.

The Poultry Advertiser's Field is Unlimited—Selecting the Proper Mediums
—Preparing the Advertisement—Awaiting Returns—Taking Proper
Care of Correspondence—Advertise According to the
Season—A Satisfied Customer is the
Best Advertisement.

Written for American Poultry Journal by Edgar Warren, Hampton, N. H.

I have been a student of advertising for many years. When I was a boy I went into the office of a prosperous weekly paper in a New England city of some 12,000 inhabitants to learn the printer's trade. There were some good advertisers in the town, and I remember listening to the stories they had to tell with eager interest. In due time I was allowed to try my hand in putting advertisements in type. I took great pride in this part of my work. I studied the advertising columns in our exchanges for suggestions and hints. I tried to make the advertisements on paper as effective as possible. After a while the call came to "come up higher," and I left the printer's case for the reporter's pencil, and a few years later laid that down to study for a profession, but my interest in advertising has never ceased. Even now a well set, attractive advertisement will catch my eye, and I read the advertising pages in the magazines as faithfully as I do the rest.

The poultryman has a great advantage as an advertiser from the fact he (potentially) has the whole world for a field. The field of the ordinary advertiser is limited. The mechanic draws his trade from the surrounding country, and his sphere of influence soon meets and infringes upon the sphere of influence of the mechanic in the next large town, but the poultryman is under no such limitation. After his reputation is established the whole world trades with him. He may expect orders from all over the United States, Canada, Mexico, England, Germany and even far off Australia and from New Zealand. The poultry papers go everywhere and everywhere are men and women who have money to spend for stock and eggs.

The first requisite for a successful advertiser is that he have something to advertise. The day of the fake and the fraud is soon over. He is found out and written up and the best papers will not carry his advertising. To succeed a man must have something the public wants; something that he himself believes in and can vouch for with all his heart. The public will pay a fancy price only for a fancy article. There are millions and millions of frauds in the world, and men are not going to pay \$5 to \$25 for a cock and \$2 to \$5 for a sitting hen when they can get as good around home for one-fourth the sum. The advertiser must have a strain noted for egg production, or must breed prize-winners or must have a variety that is becoming popular, but which is not very widely distributed as yet.

The next thing is the selection of a medium. I said a paragraph or two back that the poultryman has the world for a field. So he has, but not at first. He cannot expect a world-wide trade until he becomes known. The customers he makes to begin with will be those who live in his section of the country. He must not expect orders from a long distance, at least not many of them. It is probable that in his section of country there is a number of poultry papers. Should he advertise in them all or in one or two? If in one or two, which shall they be? These are important questions and demand serious consideration.

The beginner in advertising should concentrate. If he scatters his resources he will make little impression. The gunner must keep his gun trained on one spot if he would make a break in the walls. It would be better for the beginner to expend his appropriation on one good paper, taking sufficient space to command attention, than to have a few lines tucked away in a half a dozen. One good honest shout is worth any number of whispers.

My own rule in the selection of a medium is this: Advertise in the papers that the big poultrymen advertise in. There are certain men that are known to be leaders in the poultry world. They are in the business not for their health, but for what there is in it. They have made advertising a study, have learned what papers pay and what do not. Wherever you see their banners lead you may safely go. The presumption is that if certain papers have paid them they will pay you. There may be other papers just as good, but at this stage of your career take no chances. Select an old tried and true paper and stick to it.

Most poultry papers have a department, especially for beginners, where they can run a short card for a small sum. If you have a limited amount of stock or a limited amount of money it is well enough to begin in this way. Sometimes a small book will look big first. I once received orders to the amount of \$500 from a four-line card running six times. But I offered a great bargain. Two inches seem to me about right for a beginner. The space is large enough for a distinctive advertisement, one that will make an impression, but not so large as to seem like throwing money away.

Think out carefully what you want to say and jot it down. Write out the points you want to impress upon the public mind, then go over what you have written, condense and combine. Put the most striking first and put it in the most striking way. This will do for the head line; the line that is to catch the eye. Jam together the rest. Don't try to put a whole treatise into two inches. Short stories are best. Don't put your name in big type. Your name means nothing to the poultry world now. By and by let us hope it will, but now your goods must sell on their own merits, or not at all. Try to make your advertisement concise, striking, original, convincing and businesslike. Above all don't try to be funny; it is out-of-place.

There is nothing to do now but to wait. You have sown the seed, but time must grow the crop. You have read so much about the efficacy of advertising that you expect to get rich in three months, and lie awake nights planning how you will invest your wealth. The advertisement appears. How diminutive and inconspicuous it seems. You wonder if any one will see it. Reaction sets in. You have thrown your money away you think. You go down to the office and look in your box. It is empty. You go down again; it is empty still. The only response you receive for a week or ten days is an incubator circular and a letter from another poultry paper asking you to advertise with them.

Just as you are about to lose your courage and are ready to conclude that the stories about returns from advertising are fairy tales you get your first letter of inquiry. If it contains a stamp you may be pretty sure an order will follow; if it does not it is a nibble, not a bite, but whether it contains a stamp or not answer it at once in your best style. Not too long, just a warm kind note; not too anxious, a sort of friendly handshake as it were, as to change back to our figure, another bait for the fish. Other letters will come dribbling in, and one day you will get an order. This is the precursor of many others I hope. After the orders begin to come in it will save you a lot of trouble and time if you get out a neat and attractive circular, describing your stock and answering the questions you have found to be oftentimes asked, to send

with your letter, but remember never send the circular alone, always accompany it with a few lines. It is the personal touch that tells.

The temptation will come to you after the season is over and orders off to withdraw your advertisement. It seems like throwing good money away to advertise when nobody is doing business, but this temptation must be resisted if you are in the poultry business to stay. Let us look at the big advertisers again. Do they stop advertising in the summer months? Not at all. Their advertisements appear summer and winter, year in and year out. Don't you suppose these men know what they are about? It gives the public confidence in a man to see his name in the papers month after month, year after year. There is accumulative effect in advertising. The man who sees your announcement in the paper today may send to you for stock or eggs six months and a year hence. In the dull season there are fewer advertisements in the papers, and you stand a better chance of being read.

Change your advertisement occasionally to suit the season of the year. In the summer tell the people how many chicks

came Saturday. He is a beauty, and I am more than pleased with him. There was a stream of people at my place all day Sunday to look at him, and all agreed that he is well worth the price. Look out for some more orders from around here before long."

As business increases you will naturally enlarge your field of operations. You can reckon on you can do this in two ways: First, by using more space in your present medium; second, by trying new mediums. You will probably do both. In selecting new papers follow the rule already given. Advertise in the paper the big poultrymen advertise in. Occasionally it is well to experiment a little. Some new papers are business bringers. All the old papers were new papers at first, but as a rule the old papers are best. Experiment occasionally. You have no money to burn or throw away. If you have the stock and do business on the square, if you are courageous and persistent, there is no reason why you should not succeed. Other men get there, why not you?

THE MATING OF THE BREEDS.

White Plymouth Rock Breeders Assigned a Special Task the Keeping Intact of the True Rock Shape and Form.

The Steady Advance of This Variety Due Largely to the Wisdom of Its Best Friends. The Value of an Unbroken Male Line in Breeding Operations. Preserving the Egg Type.

PAPER NO. 8—THE WHITE PLYMOUTH ROCK.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The bad effects of a deviation from correct form seem to show more plainly in the White Plymouth Rock than in most any other breed or variety of fowls recognized by the Standard of Perfection. Break the lines in this fowl and the specimen seems to go to pieces wholly. One reason for this is that a White Rock, built in proper lines, is a bird most pleasing to the eye, and in its entirety a thing of beauty and grace, suggesting strongly a combination of beauty and utility.

There are annually shown a large number of White Rocks which should have been assigned to the butcher's block. Some breeders striving only it would seem for whiteness of plumage have sacrificed shape and form. In one of the leading shows last winter the judge refused to place a first award in this class, because, he said, there was not a bird shown in the class preserving true Rock shape.

Ruin the shape of the White Rock and you ruin the variety. Nor can the White Rock breeder ever go as far toward Wyandotte shape as have many Barred Rock breeders and maintain the variety. It is absolutely necessary to the life of the variety that the long back, deep breast and abundance of body room and surface be maintained. U. R. Fishel, who is abundantly able to give advice in this matter says:

"One of the greatest secrets of success in the poultry business is successful mating of the variety of fowls you are breeding. You want the results of your matings to be better each year, therefore to obtain this improvement you must know how to mate your breed. In mating White Plymouth Rocks, the most beautiful and profitable of all fowls, you should select a male bird with as good low comb as possible, a bird full in the hackle, showing strength, a male bird that is active, alert and chuck full of vigor, a bird absolutely white in all sections. He must be broad across the back, with a rather long back raising with a concave sweep to the tail; tail should be short and carried low and fairly well spread. Breast of the male bird should be broad and full, showing capacity for carrying a lot of flesh. The male White Plymouth Rock should stand well up on his legs and same should be set well apart and if possible of a good yellow color. I always like a heavy-boned bird, both in males and females. Take a male of the above description and mate to him females of good size, heavy bone, birds of full broad breasts, broad backs with an incline from back of neck to tail and a short, well spread tail, female with good head points, and you are sure to secure from this mating a large per cent of strictly high class specimens, provided, of course, that the birds you have mated come from a strain of fowls that you know are well bred and will give to their progeny that high quality we all desire. Blood will tell in White Plymouth Rocks as well as in any kind of stock. Something like fifteen years ago, when I began breeding White Plymouth Rocks, it was almost impos-

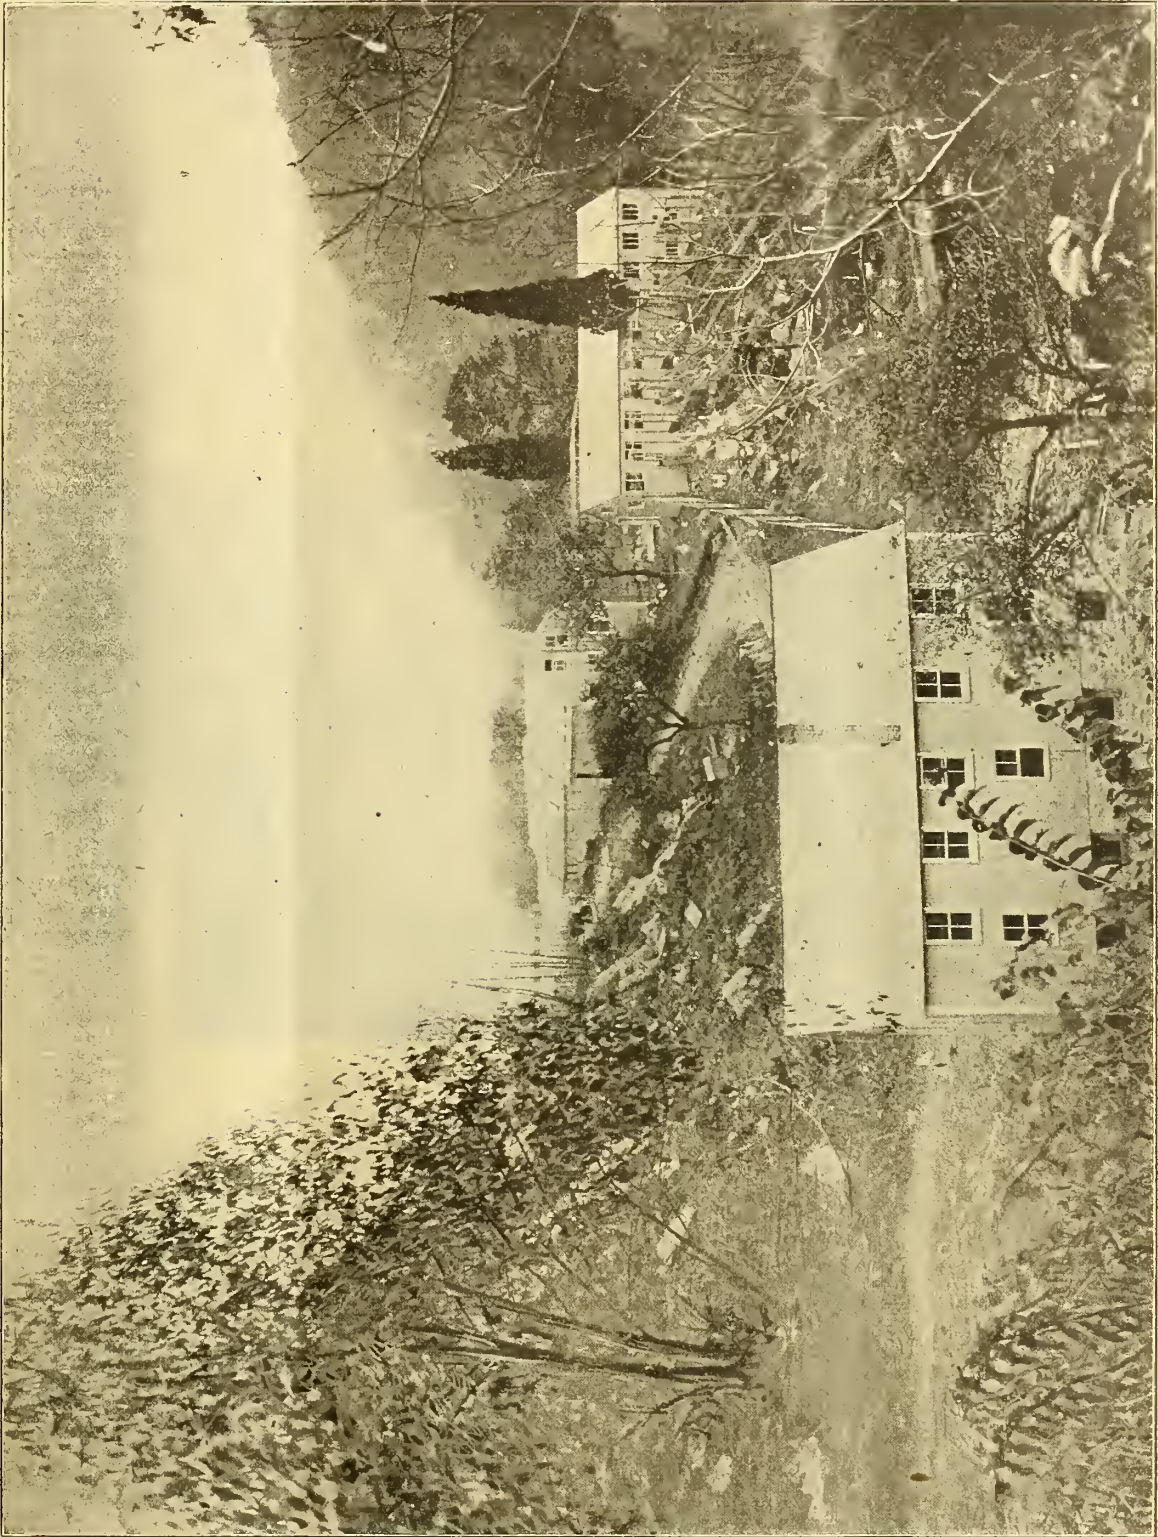

S. C. BUFF ORPINGTON.

First prize cock at Minneapolis, 1907. Owned by A. A. Ziemer, Waltham, Mass.

you have growing on your farm which will be ready for them in the fall, and in the fall tell them that you have some fine stock for the fall and winter shows.

There is an indirect advertising that is very important. The editors of the poultry papers as a general thing are good fellows and anxious to help their advertisers along. If you have any item of public interest they will be pleased to give it a place. Did you win first on cockerel and special on breeding pen at the Squeedunk Fair? Write the editor about it. Have you received an order for stock from Patagonia or Peru? Write the editor again.

There is also an indirect advertising of another sort; that is the reputation that comes from doing business in a high-toned, honorable way. There is an old saying that voices a great truth: "A satisfied customer is the best advertisement." The majority of those who send away money for poultry and eggs are sensible, fair-minded folk who know when they are well used and appreciate it. Always do a little better by a customer than you agree. Every man has his friends, and if you use him well he will tell them about it. It is a great thing to get a letter like this: "The cockerel you sent

Scene on the Rock Hill Poultry Farm, Ossining, N. Y., where they are producing some grand specimens in S. C. W. Leghorns, White P. Rocks, White Wyandottes, Silver Pencilled Plymouth Rocks, White Guineas, Buff Cochin Bantams and White Muscovy Ducks.

sible to secure an absolute white bird with rich yellow legs, but by careful mating we are producing them now by the thousands. This was done by careful mating. But a few years ago all White Plymouth Rocks had very large, unsightly combs. Today no breed of fowls have neater low combs than the well-bred White Plymouth Rocks. By careful mating year after year one gets in complete control over his flock that he can by properly mating change any section of his birds as if by a magic wand. This, to be sure, takes years of study and time, but if one starting will start with the best obtainable in their selected variety there is no need of making a mistake in mating.

"It is not supposed everyone breeding White Plymouth Rocks has just such birds as I have described above to mate, but you can select them as near this type and make up as possible, so in several season's work you will have the quality you desire."

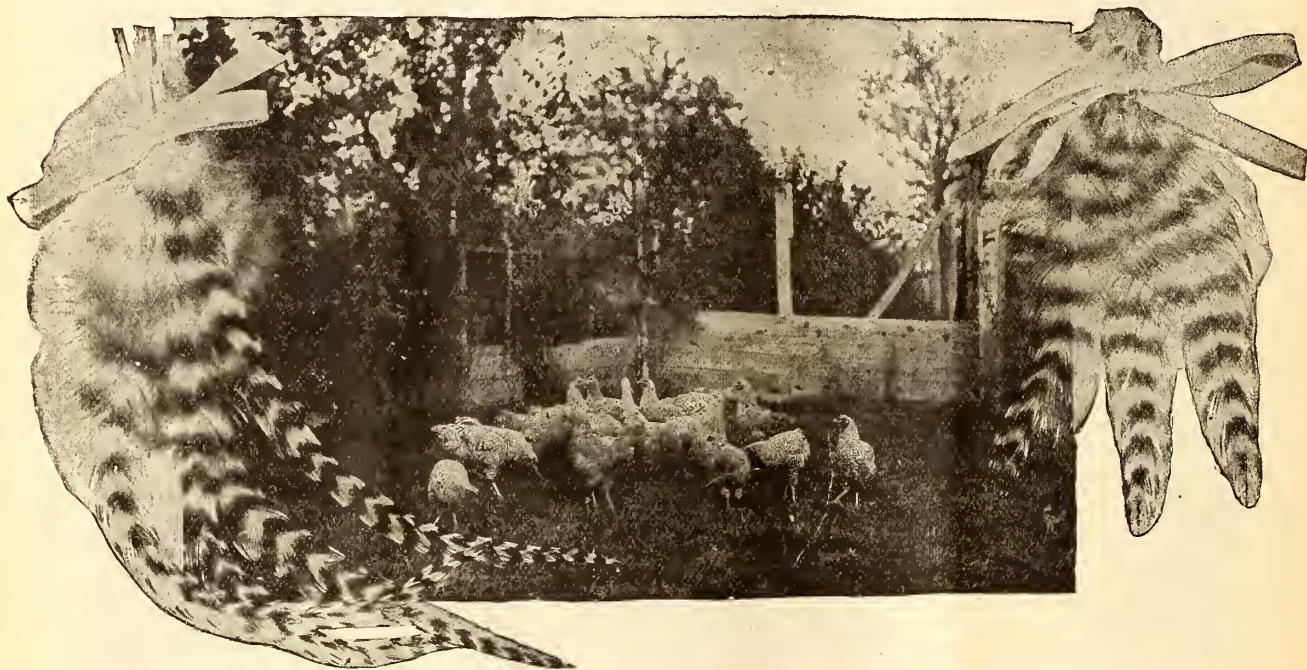

A FEW MISCELLANEOUS ITEMS.

Written for American Poultry Journal by Mrs. Frances Tallon.

If one was asked for remarks regarding the weather it would not be a hard matter to discuss, but to get one's brain in working order, to say nothing of the exertion of guiding a pen, is almost beyond us at this time of extreme heat and

of muslin, cut a hole for his head to go through in one corner, then two more holes for his legs, brought the three points over his back with tapes, leaving the straight or bias edge to come under him, so the droppings would fall outside. I then swung him up just so his toes and the nut of his feet touched the floor, fixed water and feed so he could get it at all times and gave some beef scraps. I took him out yesterday and he was almost as well as ever. He slept in the brooder last night, and this morning the other chickens were trampling all over him and the poor chick was walking straight up. Now he is sleeping in his sling. So I am confident that it's not always leg weakness, for I am sure that it was not in this case, and if it is the swinging them up seems to be the remedy. It's not much trouble, and if they never get entirely well they will make a good fry some day.

I have just finished reading two articles in a poultry journal. One says, "cull at once," "don't let them go any longer." You would think it was contagious. The other says, and seems to me the most rational, "don't be in a hurry, that often the bird that looks bad now when fully matured makes your show bird;" they often develop unexpectedly some fine points, such as color and shape. I don't see how any one can tell, especially in some breeds, what is best in half-grown birds or until almost fully matured. I remember when we first commenced raising Orpingtons that some of the culls were put back and the ones we thought best when small taken out. The ones we supposed were culls developed into fine

A group of "Ringlet" Barred Rock Cockerels five months old on the poultry farm of E. B. Thompson, Amenia, N. Y.

dry weather. This heat seems to have dried up every idea one ever had, and the poor chickens feel it and hunt for shade and cool places more than in July and August. It's a good thing for late hatched chicks; gives them a chance to get out and hunt bugs, for if it was rainy they would have to stay indoors, and I advocate range for chickens. If you want them to grow let them go and take care of themselves.

To our beginners I want to say a word in regard to our so-called "leg weakness." More often I do not believe that it is a weakness, but that they have somehow been hurt in the upper part of the leg or the back. I will give you an account of an experience I am having. I had a fine young cockerel of a special mating that was coming up to all expectations, as far as he had lived, strong and vigorous. He and two other brooder chicks always chummed together. They would be gone most all day. When I let them out to feed one morning he was all right, but at night when I went out to feed he was walking like a duck, only standing almost straight up. I examined him and could find nothing wrong, but he could not walk like a chicken. I let him go for a week, thinking it was no use to do anything, and he was such a curiosity, standing straight up like a child; had to get down flat to eat; could not get his head down; his little short tail feathers dragged the ground when he walked. I felt sure, and do yet, that something hurt him. Less than a week ago I made a sling for him and put him in it. I took a three-cornered piece

cockerels. Cockerels especially are hard to tell until well grown; pullets show their breeding and good points earlier. I remember a cockerel that outgrew the others in every way; was crowing when the others were so small they did not know what it was. When one year old he was a cull and the others fine, handsome birds, but in the early fall any one would have picked him out as a good bird. In a recent article it mentioned bread and milk as a fine thing to bring birds to maturity fast. I believe that is true. Last year I knew of a small flock that had access to milk at all times while it was sweet in the morning, then when it soured. I never knew birds to reach maturity so soon, but there wasn't a good strong male bird in the lot. Some were not fertile and others got sick and died. I believe it was the milk that made them mature so rapidly, but they were not hardy and milk made them so. It's not their natural food. Nature did not provide milk for them. Grain and seeds seem to be their natural food, and they must scratch for it, which they enjoy more than anything else. If you don't think so just let them out in your flower bed or garden.

The man who studies his birds, their habits and characteristics, is the man who succeeds in the poultry business. Much helpful advice can be gained from books, but unless this is proved and supplemented by personal experience, its practical value won't amount to much.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded W. F. Purdy, Jr., Bandana, Ky., and the second prize to A. V. Meersch, Poughkeepsie, N. Y.

THE FOWLS DURING THE MOULT.

As the older fowls will by this time be looking ragged and loose feathers are being plentiful in the houses and runs the poultry yard, except for the interest taken in the growing chickens, will not be attractive. The egg basket will be much lighter than it was a few weeks ago, as many of the hens will have ceased to lay. But to make poultry profitable it is necessary to pay plenty of attention to those birds that are going to be kept through the moult.

Fowls that have a large range and are well fed usually go through the moult without difficulty, and those that pass the night in warm houses will generally begin to moult sooner than those that roost in cool, open houses or on trees. As a rule it is as well that the fowls should begin to shed their feathers about August. If they commence sooner than that the moult is only partial, the plumage falling again in October or November, or if the moult begins very late the long cold nights and often wet days cause it to be prolonged.

To some extent the moult can be hastened or retarded. If it is wished to postpone it the fowls should be allowed to roost in as cool a place as can be given them. Hens of sitting varieties can have the moult hastened by allowing them to sit on artificial eggs for a couple of weeks, and then taking them off the nest and shutting them up in a small pen. This will cause them to drop their feathers all at once and quickly gain their new plumage.

Another way of causing the hens to moult is to shut them up in small warm houses and keep them on short rations, giving barely half the usual amount of food. Some Epsom salts should be added to the drinking water, just enough to make the water taste. When the fallen feathers show that the moult is well on the hens should be fed more generously, gradually getting them on the full amount of food again. The object of this is to induce them to come on to lay again in October or November, when eggs are very scarce.

It is better for all reasons to separate the cocks from the hens during the moult. They are often fierce and spiteful at that time, ill-treating the hens, particularly at feeding time. They take longer to moult than the hens, owing to the hackle and sickle feathers, which are slow in growing. The cocks do better in small runs if kept clean. They must not be exposed to the heat of the sun when the new feathers are growing, or they may become tinged and the color spoilt.

Special care should be taken that the fowls when moulting have access to shelter during rainy days. A thorough soaking when they are nearly bare of feathers is apt to result in an attack of roup or cause a chill, which will last for many months. Fowls that are kept in confined runs should have plenty of green food, such as lettuce that is running to seed. A little flower of sulphur mixed with the soft food and given in the proportion of a teaspoonful to every three fowls two or three times a week on dry days will help the new feathers to grow. It is of no use to put a piece of stick sulphur in the drinking vessel, as some people do, for sulphur is insoluble in water.

A. V. Meersch.

FULL CARE OF POULTRY.

But few amateur poultrymen, or professionals either for that matter, prepare sanely and systematically for the changing of their flocks from summer to winter quarters. We too often forget that our whole course of procedure must be

altered with the first appearance of frost and winter. We have been so used during the spring and summer months to our birds getting their full supply of green stuffs from their range that we do not prepare as we ought for their healthy maintenance during the frosty chilling fall nights.

For five or six months our young birds have had their free range, getting their full quota of succulent green grasses and weeds, catching all the juicy worms, bugs and grasshoppers necessary for their development, until now they have gotten to be big, healthy strong fellows, showing their colors and almost ready for the show room.

Now comes the first killing frost or freeze, destroying almost all the good green food that has made our flock so far so healthy and good to look upon, and all bugs and worms have disappeared as if by magic. It is right here that we make our serious mistake. We know, of course, that if we want our flock to continue to improve, our hens to continue laying and our pullets to commence laying, we must as nearly as practicable continue to feed green stuffs, grains and meats in "summer rations." But how is this to be done? some one asks. My answer is, leave it to the birds themselves. They have been used to all they wanted of green stuff and bugs, let them have as much as they will eat of cabbages, mangles, beef scraps and fresh cut bone. My experience has been that if the flock has had free range getting all the grass and animal food necessary they will not now make gluttons of themselves, and it is well from the start in winter feeding to have hoppers full of everything.

We can not, of course, expect to feed our hens sawdust and

WHITE SWAN.

Bred and owned by Golden West Duck Ranch, Joliet, Ill.

doorknobs or even musty wheat or spoiled cabbages and get big eggs and plenty of them. It does not in any manner pay to feed second-class feed to poultry, musty grains, chaffy wheat, etc., unless, of course, it pays the man that sold them to us. Use at all times the best that can be gotten, and if our stock is what it should be, and it is correctly housed and tended, we need not fear the results.

Now, just a few words as to housing. I have had good effects from both the open front style of house and from the more closed and differently ventilated houses, but there are two things that laying hens must have if they pay for their keep, dry floors and roosting quarters free from drafts. Let us remember that to get eggs in winter is a reversal of the natural order of things, and that by coaxing our hens to lay well in winter we have almost performed a miracle. How careful we ought to be then that our hens get all the ordinary comforts that are conducive to winter laying.

First, feeding. The line of feeding must not be abruptly changed from that pursued during the summer months. There must be plenty of good feed, with a variety from the start, and the hen will select what she needs.

Second, dryness. Not only not actually wet and muddy, but dry. Everything should be dry, walls, ceiling, nests and floors. Especially ought the floors where the hens scratch for food (grains) be dry. Dust boxes, where the hens can actually dust, get in and get good dry dust all through them, are very essential.

Third, no drafts. When I say "no drafts" it is not meant that the birds will escape drafts at all times necessarily, but it is especially essential that the birds when not exercising, that is, when quietly at rest on their roosts, should not be exposed to drafts or colds, roup and consequent failure to lay will be results.

W. F. Purdy, Jr.

SILVER LACED WYANDOTTES.

A Strong Argument in Favor of This Grand Old Variety—A Great General Purpose Fowl—One of the Most Difficult to Breed to Standard Requirements.

Written for American Poultry Journal by John S. Orr, Augusta, Ky.

I notice in the August number of the American Poultry Journal you predict a boom for the Silver Lace Wyandotte, advising breeders of them to continue and others to procure them. I am not surprised at the prediction—recurring from the standpoint “though sometimes long delayed, real merit will win out.” I am sure if any one will acquaint himself with the characteristics of the breed, with honest purpose to discover real merit (I speak of the genuine strain; not by any means all the gray spotted birds that look somewhat like Silver Wyandottes and pass for them—birds that perhaps have enough of the original strain in them to give them the resemblance, with about all the real merit

SILVER PENCILED PLYMOUTH ROCK

First prize pullet at Madison Square Garden, New York, 1907. Owned and exhibited by Rock Hill Poultry Farm, Ossining, N. Y.

bred out of them), the genuine original strain, he must confess it is a wonderfully meritorious breed of fowls. Considering all history concerning their origin thus far presented (I suppose we have now about all obtainable), we are forced to conclude that the Silver Lace Wyandotte is a freak of nature. Its origin unknown, no credit can be given to any originator save the great All Wise, who, doubtless, in his manifold blessings to the human race, produced a breed contributing more excellent features than any pre-existing. This may seem extravagant comment, but if the writer was well known, together with his experience, he would be credited with honest opinion. From early youth to the age of 60 a lover of poultry, never content without producing some, continually striving to discover the best specimens, principally from the utility standpoint, not wholly ignoring appearance, but trying to combine the two prominent features, must say never reached the acme of success until he obtained the genuine Silver Laced Wyandotte. How it all happened may be interesting to your readers, and I will relate it. About eight years ago my famous cousin, the late lamented T. E. Orr, on a visit to his relative, observing my home premises and the poultry thereon, made this re-

mark: “John, why do you not get rid of all this poultry and handle exclusively pure-bred Silver Wyandottes, the best all-purpose breed in existence, according to my judgment. I have tried all kinds; the best I could obtain at fancy prices, too. My experience is the Silvers are far ahead of all others, will lay more eggs the year round and thrive better with less care on range, develop quicker and as a table fowl has no superior. As for beauty, according to my taste I think none more attractive.” Now, who among all poultry lovers and producers and acquaintances as well of Tom Orr do not know that his favorite breed was the Silver Wyandotte? At the time of his visit I was experimenting, as I always did, to discover the best. I had at the time pure-bred White Leghorns and Plymouth Rocks; had previously tried the Brown Leghorn, Buff Cochins, Cornish Indian and what was called the Silver Wyandotte and other breeds. The result of all my experience was that the first cross between the pure White Leghorn and Barred Plymouth Rock was the best all-purpose fowl, but no two of them hardly resembled each other, whilst the produce of the cross was worthless. After Tom’s visit and frequent letters received from him urging me to follow his advice to breed exclusively only pure Silver Wyandotte and to never under any circumstances mix the strain with other Silvers, no matter how attractive they might appear, I concluded to follow his advice. I ordered 300 eggs from all his best pens. From that day to the present I have not regretted the step taken. In fact, a series of surprises from time to time, even until the present, is my experience. The first year I kept a strict account of egg production. It was marvelous, such as hens laying regularly the whole season through, even during molt, when almost nude, five-sevenths of the flock laying daily as near as I could estimate. Some would lay every other day, then begin laying daily; some not broody during the whole season; some rest awhile, not broody, begin laying again; none broody until warm weather; easily broken when broody, begin laying again in a few days and keep at it balance of the season. Pullets five and six months old at work filling the egg basket. I kept such an account of egg production as to satisfy myself that the average egg production was near enough to the 200 mark that no general flock of birds could exceed my Silvers. The young chicks grow like magic, keeping their plump, blocky form from hatching time to maturity—ready for the broiler seven and eight weeks old. Have produced chicks to weigh quite or nearly two pounds eight weeks old. Am sure they can be made to do so. I believe, no matter how large the breed, no chick can outgrow the Silvers to four months old. For the table there is certainly nothing better—solid, gamy, toothsome flesh, nothing coarse or stringy. Dressed ready for the cook, their rich yellow carcass, plump round bodies with abundance of savory breast meat, tempts the appetite in anticipation. There is a difference in the eating quality of fowls. The epicure can discern it. No complaint, but only praise on every hand, the eating qualities of the Silver Wyandotte, young or matured. The Silvers are a constitutional bird. Their general make-up indicates a bird of stamina. What other breed can produce females five and six years old, beginning with the pullets in the fall, laying with them all through the season, exploding many of the fine spun theories of poultry science about egg production? I have hens five and six years old—not for sale, not all show birds, either—devote the whole season to laying, being broody for a couple or three days only during the season, rest a week or so and begin their work to continue balance of time. The Silver is just the right size bird, not too big, not too little, for the general market. Is an economical feeder and best of rangers. As a farmer’s fowl—par excellence. For eggs and flesh—dollars and cents the year round. The Silver Wyandotte is the farmer’s fowl and without a rival, all points considered. Their eggs are the most beautifully tinted, with such variation as to be pleasing and attractive; eggs larger than the larger breeds, exceeding generally any other breed save the Minorca, which is often a close rival. I have hens that lay eggs almost as large as a duck egg. Eggs rich flavor. Lastly, beauty points. What fowl can fill the eye of the true artist better than the standard requirements of both male and female? It is justly called the beauty breed. Those invincible beauty spots, so uniform and symmetrical, the sheen and glare of the beautiful blending of the pure white and black, no specks, dots or stripes, no solid color, will attract the eye and develop the same degree of admiration, with a growing fascination to the eye trained to appreciate beauty and excellence. No previous conception of mortal man, no matter how ambitious or successful originator, could possibly have produced the bodily shape and typical markings of the Silver Wyandotte. It had to spring from the original Supreme Creator source.

The Silvers are not by any means today the most popular

breed of poultry. Why? Because of the lack of merit? No; but only because the fancier cannot produce as large per cent of show birds as of other varieties. Here is a prominent instance where the show fever exceeds the real value of the product, a mere fancy without substance. There are breeds of fowls today boomed to bring fancy prices and win the popular favor that when the booming ceases will be relegated to the rear when compared honestly with the more meritorious. The real value of poultry is their utility quality. Here is an instance of best utility neglected to satisfy the prevalent commercial craze. There is something wrong somewhere, as indicated by the position the Silvers have for the past few years occupied in popular favor. The problem is how to correct it.

The writer believes that the standard of perfection can be made to alleviate the situation somewhat. For instance, the Plymouth Rock breeders, numerous and powerful, have had concessions made to them on the score card, whilst the Silver Wyandotte, much harder by many points to breed, has no concession. It is apparent to every one that any mating of Plymouth Rocks will produce every specimen with strong typical markings, whilst with the Silvers there are many variations, even the mating of the best types. It cannot truthfully be said that this difference of breeding tendencies of the two varieties is because the Plymouth Rock is an older and better bred variety. It is simply because of the many more points to be bred for in the Silvers. In judging this is very apparent. For instance, color points. The Rocks are required to conform to almost a uniform color entire body. Not so with the Silvers. The Rock breeders have trouble to get the one uniform color markings required, but the Silvers have several. Almost every section different—viz., head, hackle, saddle, back and wing bow, wing bar primaries and flight feathers. Right here are eight points to consider over and above the dominant marking of each that is required by the Silvers more than the Rocks. Then there is greater tendency in Silvers to variation in comb, color of eyes, color and carriage of tail, color of legs and feathers thereon. A little meditation on the subject will convince any one familiar with the two varieties that these are facts. The Silver Wyandotte is without doubt the most difficult to breed to standard requirements of all the standard varieties, which can only be accounted for because it is strictly nature's production from a combination yet unknown. Experienced breeders know that to reproduce the best show type is almost as much accident as otherwise, for often it is demonstrated that the mating thought less of will give best results. If the fact was generally known that almost any specimen of well-bred Silvers, though quite deficient in show quality, often produce best show specimens, with their wonderful utility quality known, there would be more money in handling them than in any other known variety. It is due the Silvers that such concession should be made in their favor, that the breeder may receive as much benefit in the work of production and dissemination as do others of less worthy varieties, to enlighten the general public of the benefit to be derived from the bird that years ago startled the poultry world in increasing the maximum annual egg production from 170 to 200 and upwards, as well the dominant contributor to most all the present popular varieties, as either ancestor or type for best form and utility, it being the All Wise Creator's contribution for the benefit of humanity in best shape, most beauteous appearance and beneficial productiveness.

THE POULTRY INDUSTRY AS IT REALLY IS.

Failures in the Poultry Business Due to Lack of "Push" and Energy on the Part of Those Who Enter into it—The Breeding of Poultry is not a Get-Rich-Quick Business—Start at the Bottom and Build up Carefully and Gradually.

Written for American Poultry Journal by Geo. L. Leitze, M. D. S., Buffalo, N. Y.

An epidemic present in all seasons of the year, "The Poultry Fever," contagious to a marked degree, its victims men and women in all stages and walks of life.

One can safely say without fear of contradiction, that there are more failures, year in and year out, in the poultry industry than any other industry one might name. Most of these failures are entirely uncalculated for, and are generally if not always made by those individuals who lack the push and energy which goes to spell success in any industry or vocation they might choose to follow. The man or woman who lacks in the sense of detail, a sense which must be most highly cultivated in the "chicken crank," better let poultry

in any of its branches alone, for success along that line will never be their reward.

The poultry industry is the most fascinating and luring of industries, hence its many victims. Its profits look so large on paper that the idle dreamer and get-rich-quick individual often dream of fabulous wealth in a short time. They count their chickens before they are hatched, as it were.

Nevertheless there is no industry which shows better returns for the amount of capital invested as that selfsame "chicken business," but let me tell you, fellow fanciers, start at the bottom of the ladder and steadily but surely work upwards, that's the only safe and sane start for the average individual, and learn from your own experiences, which will be varied and abundant. First subscribe for at least three good poultry journals, one of which should be the best, and that is only one the American Poultry Journal, then study your journals, don't just read them, study them intelligently and absorb what knowledge you can from them, opinions differ on most subjects; that's where your small flock and daily experience come in handy.

Don't be a parrot; the Lord has supplied most of us with enough brains and a variety of sense, so use your senses and faculties of judgment and reason, observe, compare and reflect; watch your flock closely, study their daily habits and needs and above all do not neglect the minute details, therein you will find your success hidden, so "seek and you shall find." When you start your venture, start right. A poor mechanic requires good tools to work with, so procure good birds for your foundation stock. The best of your chosen breed are none too good for you. A few good birds of exceptional quality and worth are better than a larger flock of inferior quality. Many large and successful poultry plants were started with a pen or two of really good birds and that same opportunity is still open to you.

No matter what your intentions are, fancy or commercial poultry, they go hand in hand. The day of "scrub" poultry farms is near its end.

As well as the poultry industry is now advanced it is still in its infancy from a commercial standpoint. It will be a good many years in the future before the supply of eggs, broilers, roasters and fancy poultry reaches the demand, so the field is large for the small man. The prices obtained for choice specimens of any variety of the standard breeds were never better than now, and I for one do not think that they have as yet reached their limit.

In my humble estimation the fancier is the nucleus from which our large commercial poultry plants have sprung, regardless of the contrary opinions. The nature of the hen in her wild state was to lay four or five dozen of eggs and then hatch out three or four broods of chicks and then take a vacation. Who took that lazy hen in hand and cultivated her egg producing organs, made her work harder with only a slight increase of wages? The breeder and fancier. Who is still increasing the yearly egg production per hen? The breeder and fancier. Who develops the proper size and shape in the standard bred fowls to form a foundation stock for the commercial poultryman to work with? The breeder and fancier.

Hundreds upon hundreds of choice varieties of the various breeds of owls are bred in back lots of cities, large and small. Sometimes the "wise man" gets them, sometimes they go into the pot. Boys and girls, get out and show your birds, stand on your own pedestals, let the world know what you have accomplished and right here let me say the show room in conjunction with the standard of perfection are two of the greatest teachers for poultrymen in existence today. So do not fail to take advantage of those opportunities so easily grasped. Boys and girls let us all pull together in the one right direction. Better standard bred poultry and more of it.

Kill off all weakly birds, they will never be any good for breeding purposes.

Keep an observation book in which to note down facts gained by observation and experience.

Never keep unprofitable fowls; on a successful poultry farm there is no room for wasters or idlers.

All diseased birds should be killed at once. Never doctor, as it is seldom that a permanent cure can be effected.

Attend to repairs yourself; if you are running for a carpenter every time a board is loose or a post wants fixing, your balance sheet will show a loss instead of a profit.

AMERICAN POULTRY JOURNAL

Issued the first of each month.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Local Associations and the A. P. A.

John H. Robinson, whose opposition not to the American Poultry Association, its aims and objects, but to the basis of representation of its membership, says in the current issue of Farm Poultry that in his judgment "the time has come to quit sharpshooting and engage at close quarters." He believes that the most effective way for the local poultry associations, specialty clubs and kindred organizations to gain control of the American Poultry Association affairs is for these associations to take advantage of the situation and secure membership in the association.

"It is possible under a literal construction of the constitution for the local associations to send to meetings

of the A. P. A. men who are not individually members of that association; for each of these men to exercise all the rights of members on the floor and to vote each as many votes as he has credentials; and until the individual membership is much increased and branch organization perfected it is possible for these representatives acting in concert to control the meetings of the A. P. A., and to revise its constitution and by-laws to suit the associations which they represent.

"Whether such a literal construction of the constitution is reasonable is a debatable question. We assume that the presiding officer of the A. P. A., or a committee on credentials would probably rule that the delegate must individually be a member of the A. P. A., and that exclusion under such ruling would be followed by amendment of the constitution to cover the point. But even if it is required that the person representing the A. P. A. be individually a member of the A. P. A., we do not see how the association could reasonably go beyond that and deny a society the right to be represented by proxy in an assemblage where proxies figure as prominently as in an A. P. A. meeting, or limit the number of local associations which one person may represent.

"We would therefore suggest and urge that all local poultry associations, all specialty clubs and all societies organized in the interests of poultry culture join the American Poultry Association, thus securing representation and votes in its meetings and a voice in its elections. If all will do this, and will by concert of action endeavor to secure legislation and administration in accordance with their needs and interests, they can by such union make themselves the strongest factor in the organization, and should be able to so influence its development that when the income from life membership becomes comparatively insignificant the association would pass naturally to the broader basis in which associations, not individuals, are the units.

"We would also suggest that all individuals who wish to see an organization of poultry interests on a genuine representative basis, join the association and work with the local associations and with those of the same mind now in it for the natural development of the organization.

"In urging individuals and organizations to become affiliated now with the A. P. A., it is appropriate that we should state particularly some of the considerations that move us to offer this advice:

"The principle of proxy voting, which was denied when the constitution was adopted, has since been admitted, and as we understand the constitution and the situation, the local associations may now take a position in the association which will give them a base of operations from which they cannot be dislodged without uniting them solidly against the American Poultry Association. Therefore we advise all local associations to join the A. P. A., and also advise those which do join to do their best to persuade any that are reluctant to come in.

"As far as the writer is concerned personally, while he believes that the individual membership feature ought to be eliminated, and disapproves of organization on that basis, as well as on

the mixed basis of the latest constitution, so strongly that those conditions constitute for him an unnatural environment, and he would, if he considered only personal inclination and scruples, never apply for individual membership in the association; there exists at present a combination of reasons for putting aside personal preference and feeling.

"We have never heretofore advised anyone to join the American Poultry Association. We do so now because we think we see in the present situation the opportunity for the local associations to become prominent, powerful and permanent factors and ultimately dominant in the association, and because just at this stage every individual in sympathy with organization of the local associations who joins helps the movement as much as any association that joins. We could not consistently advise others to do what we would not do ourselves. It therefore becomes necessary to choose in which matter we will be consistent.

"Such a choice is made easier at this time because the association now has a president who has a correct appreciation of what is required of a presiding officer and who can be relied upon to be consistent in his actions as presiding officer. There cannot be while he is in the chair such outrages on parliamentary procedure, or such disregard of the fundamental law of the organization as have occurred almost as a matter of routine under nearly every administration within our recollection.

"He is not the man who will warn members to beware how they disturb its marvelous adjustments; he is more likely to indicate each weak point in it and suggest that it be improved. Under a presiding officer who is neither a promotor nor an obstructionist, events will ultimately work into natural channels, and we do not think that after a trial of business done in this way the association will again carelessly choose presidents of another type.

"Further, we consider the net result of the recent election and adjustments following it an expression of the membership at large qualifying the position taken by the association in adopting this constitution, and that under the executive board as now constituted the constitution will give quite different results from what would have appeared had the element which forced it through been able to maintain an unquestioned ascendancy."

The Making of Sales.

Among the many lessons which a very large number of fanciers have to learn is that of properly handling their correspondence. There are few, exceedingly few, fanciers who know how to do this as it should be done. The knowing how to write a good letter is possessed by few people. The Poultry Journal brings daily to the advertisers a number of inquiries. These letters are written by many men and are, as a whole, a curious lot. They are a reflect of human nature, moods and character. The fancier receiving them counts, or ought to count, each correspondent as a probable purchaser. He ought to study carefully every letter and by so doing should be able to get a pretty good idea of the character of

the writer. Having done this he should write each letter according to the individual finding. This thing of dismissing an inquiry for a cockerel with but a line as to what such a bird will be sold for is mighty poor business policy for a breeder to follow. Yet it is the custom. Few specimens are sold by such letters.

Let the breeder enter into the spirit of the inquiries as indicated by his letter. Answer all questions fully and at length. Some of the questions may appear foolish to you, Mr. Fancier, but never mind, you would find just such foolishness in the letters you addressed to breeders a few years ago when you were young in the business were those letters before you today. Keep an even temper when handling the unreasonable demands. Show to the inquirer wherein he is asking something unreasonable. He will readily see the point and thank you for your straightforward action and advice. You want to sell him stock. He wants to buy and will buy of you if you know how to handle him. The fanciers most successful are those who have learned how to properly handle their correspondence. It is simply a study of human nature. It is a school in which every fancier should be a pupil in regular attendance.

Death of Samuel J. Hibbs.

Samuel J. Hibbs, Akron, O., well known as a breeder of fancy poultry, died Saturday, August 24, aged 59 years. His death was caused by inflammation of the bladder. Mr. Hibbs had been in Buffalo attending the convention of the American Poultry Association, of which he was a member, and became ill Tuesday. He came home Wednesday and failed rapidly. He leaves a widow, formerly Anna Dean, of Akron, O., and three sons, Frank, of Chicago; Charles and Albert, of Akron.

Our Colored Cover This Month.

On the cover of this month's issue we present to our readers a very handsome and artistic drawing of a pair of Houdan fowls. This variety of the French breeds is not as popular as it was a few years ago, but is still being bred quite extensively in some localities, and is considered a very excellent fowl, both for egg production and table purposes.

The Toledo Fanciers Company, S. B. E. Seese, secretary, will hold their show during the week beginning January 21. It will be a comparison judging show, with Butterfield, Rigg and McClave as judges. The prize offerings are exceedingly liberal. In a letter Mr. Seese says: "By the way, we want to make some effort to get a representation of comparatively rare poultry and we intend to offer sufficient inducements to get entries along this line." Here is the opportunity which the breeders of Polish, French classes, etc., claim show managers generally have been denying them.

"In organizing branch associations eastern and western ideas seem to run along different lines," says Farm Poultry. "In the east branches are being organized by states; in other parts of the country by groups of states. The result of this will be to give the east increased representation on the execu-

tive committee, unless the executive committee shall make provisions combining some of these state branches. If this is not done the tendency will be for the western branches to divide, which cannot consistently be prevented if state branches are continued in the east." The condition of the branches, as now made up, will not long exist. In the final settlement each state will be formed into a branch. It is the best for all concerned. A strong state branch can have great influence with the state legislature. As constituted the western branches are without this influence.

* * *

One who sees but little of good in the present constitution of the American Poultry Association writes us inquiring if we have ever grasped the fact that were they to combine the specialty clubs and local poultry associations could "run affairs" to suit themselves. We have. And when the specialty clubs and local associations in the proper manner combine and by so doing secure a majority of the membership in the American Poultry Association they will be entitled to "run affairs" to suit themselves. Majority rule is the thing in this country.

* * *

A writer in the South African Poultry Journal says: "It has been proved by repeated analysis that wet fed birds lay eggs containing an excess of moisture." To which Farm Poultry adds: "Next thing some one will solemnly prove by demonstration that the feathers of wet fed birds are harder to dry after being picked. After that the next thing in order will be to provide rarefied water for dry fed birds lest the common article prove too wet for their constitutions."

* * *

The interest in Black Wyandottes is becoming general and they will be shown in greatly increased numbers the coming season. They are splendid egg producers and have the Wyandotte quality as a table fowl.

* * *

Some friend should take Henry Trafford into a quiet corner and explain to him that the members of the American Poultry Association consider his proposed "dressed poultry standard" as a huge joke.

* * *

We read in a farm paper recently an advertisement wherein a gentleman offered for sale a fourteen-acre poultry farm. Reason: "Have regained my health and wish to go to work again." How is that?

* * *

The American Poultry Journal as a pioneer in the work and as one having much experience will be pleased to render the committee on color illustrations in the Standard any assistance desired.

* * *

Farm Poultry is authority for the statement that George D. Holden is slated for the presidency of the American Poultry Association next time. This will be disputed in Indiana.

Things That Make Poultry Pay

O. K. ROUP REMEDY

During Fall and Winter look out for Roup and don't be caught napping. Be sure to have **O. K. Roup Remedy** on hand ready for each case of roup, colds, canker, catarrh, asthma, and the similar affections which are liable to attack your birds, particularly at this season of the year. **O. K. Roup Remedy** is a guaranteed remedy for these troubles. It rarely fails to give immediate relief when used according to directions, and is perfectly safe to use. Sent postpaid to any address for 50 cents.

O. K. Poultry Food

To keep your fowls healthy, and the young pullets in prime condition for winter egg-laying, give them **O. K. Poultry Food**. It will create fresh vitality, renewed vigor and strength, and they will begin laying much sooner and at a rapid rate. **O. K. Poultry Food** is a pure, guaranteed conditioner that aids digestion, puts the egg-making organs in perfect condition, and keeps the birds lively and strong. The test of these results will be found in the nest and in the general health of your flock. Give it a trial.

LAMBERT'S DEATH-TO-LICE

Keep your fowls free from lice all they are around if you want them to be profitable. The best way to keep lice away from your birds is to use the "old reliable" **Lambert's Death-to-Lice**. This has never been known to fail. It was always good, but is now better than ever, owing to the recently installed Improved Pulverizing machinery used in its manufacture. Your money back if not satisfactory in every way. Sample for 10 cents; 100 ounces for \$1.00.

"The committee of three" and the Golden Calf.

ROCK HILL POULTRY FARM.

Rock Hill Poultry Farm is located three miles from Ossining, N. Y., and thirty miles from the great city of New York. This farm is situated in the mountains that line either side of the great Hudson river, and, being a comparatively new farm, is one of the most modern and up-to-date poultry plants that it has ever been our pleasure to visit. Being located right on the side of the mountain, it is always dry and very easy to keep in a sanitary condition, and disease is therefore unknown on this plant. There is an abundance of shade furnished by young chestnut trees and nearly 500 peach trees and grape vines. An abundance of pure, fresh water is furnished by being pumped to all parts of the farm, where the fowls can procure it whenever they desire.

In the beginning this farm was stocked with the best birds that money could buy, and under the able management of F. W. Corey this stock has not only been kept at its original standard, but has been improved upon each year, until today we venture to say that there is no better stock anywhere.

Over 200 head of breeding stock was kept on this plant last winter, and this season over 4,000 chicks were raised. These have been culled down and marketed until at the present time they have about 2,000 head of the very cream of the six varieties they breed. All young stock that does not give promise of being above the average as breeders and show birds is disposed of for table purposes.

This farm lays claim to having the best flock of Silver Penciled Plymouth Rocks in the world, and their winnings on this variety at Madison Square Garden and other shows has never been equaled and fully proves their claim to having the best.

They also claim the distinction of having produced and won on White Wyandotte cockerel at Madison Square Garden last winter, that was bred from first Madison Square Garden cockerel, 1906. Thus winning two years in succession and from the same line of blood. We do not believe this has been accomplished by any other breeder.

They made a large exhibit at the New York state fair last month and captured twenty-two out of a possible thirty-six first prizes, besides over forty second, third and fourth prizes, thus getting more firsts than all their competitors combined.

Their Single Comb White Leghorns are especially fine this season and won every first and most of the seconds at the New York state fair last month, and this in competition with some of the best Leghorn breeders.

They also have a very fine flock of Buff Cochins Bantams and can spare about 200 very choice exhibition birds.

Readers must not overlook the fact that

TOP PRICES For Your EGGS

We want to correspond with every live poultryman who can ship one case of eggs per week or over.

We are wholesale dealers and liberal advertisers in Chicago and vicinity, therefore can offer best prices, a permanent market, and guarantee satisfactory treatment.

MONEY MAKING Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. Haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first two weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND Poultry Foods

take the lead with successful poultry-raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall—it makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected" are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

THE AWL FOR ALL

they also have a very excellent flock of Partridge Wyandottes and White Plymouth Rocks, and they also have a large flock of White Muscovy Ducks, and they are prepared to supply breeders to any one who is in need of this variety of ducks.

If any of our readers should happen to be in the vicinity of New York city they should make it a point to spend a day on this farm, where we assure them they will be royally treated by Mr. and Mrs. Corey. In this issue we present to our readers a full-page illustration, which gives a general view of this farm. See their ad on front inside cover page. In writing the Rock Hill Poultry Farm don't fail to mention American Poultry Journal. Jas. W. Bell.

Debate at Niagara Falls at the Thirty-second Annual Convention of the American Poultry Association. Argument of Henry Steinmesch, St. Louis, Mo.:

In addressing you this evening, I am expected to use arguments that the American Standard of Perfection does give undue prominence to the beauty value of Standard bred fowls to the detriment of the utility value of domestic poultry. I have only one fear on this question, and that is that you may not understand my argument as I understand it, or as I would have you understand it.

I heard a story of a gentleman who was called upon to make an address and he started by saying: "Friends and fellow citizens, I will not address you as ladies and gentlemen, because I know you all too well." Perhaps he did, but the audience was very much divided as to what he really meant.

However, to get down to business. Does the American Standard of Perfection give undue prominence to the beauty value of Standard bred fowls to the detriment of the utility value of domestic poultry?

This is a question of great importance to all raisers of poultry. The present standard is without a question the best that has ever been published, but it fails to fill a long-felt want. In the first place, I want to call your attention to the fact, and you all know it, but have probably never given it a thought, that we, the members of the American Poultry Association, do not represent 1 per cent of the poultry raisers of this country, and in compiling our standard every five years we have followed a stereotyped precedent of making some technical changes without ever a suggestion of anything radical that would be of benefit or interest to the thousands and thousands of people who are raising chickens who are not members of the American Poultry Association or who have no standard.

I am not going into a long list of statistics, but just before coming here I received from the labor commissioner of our state (Missouri) reports for the year 1906, showing county by county the number of dozen of eggs and the number of pounds of live and dressed poultry shipped out of our state and the actual money received in return for same, and the total aggregates \$39,558,000. Some of you have probably heard the story of a hod carrier going up the ladder, and when near the top of a three-story building lost his

balance, fell backwards and landed in a bed of mortar. A crowd got around and lifted the man up and one asked, "Pat, are you hurt badly?" And he replied, "I don't think so." A religiously inclined gentleman thought it was wonderful that he was not seriously hurt and remarked, "Well, Pat, the Lord was certainly with you in this tumble." "Well," Pat says, "if he was, he was going some." So with the returns of the Missouri hen, I feel proud in saying, "She is going some."

Still this simply represents one state. The United States is now made up of fifty states, territories, etc. Multiply the Missouri output by fifty and it gives us figures that would make Col. Mulberry Sellers green with envy, and this is one part of the chicken business that has received hardly any attention

from the American Poultry Association. I tell you, ladies and gentlemen, that we have been too narrow gauged in our hobby.

Now, let us give a little attention to the Standard. All the way through it lays great stress on the beautiful "snow white," "the rich golden buff," the fine "mahogany red," elegant "glossy metallic black," etc. Page after page is devoted to describing color—not only of the feathers, but the legs, the eyes, the lobes, etc. We will take the Barred Rock as an example, showing how much attention is paid to color and shape and how little to anything else.

Not a word is said about the utility qualities of this breed, the most popular American chicken, and I say this with all due respect to the Silver Laced Wyandotte and all its cousins and

Strong and Healthy Birds with Full White Plumage

Breeders recognize the necessity of raising muscular birds with fine white plumage especially when they wish to exhibit, and to do that you must start at an early age to feed your birds something that will insure the desired results.

**CORNO
HEN FEED**

Makes Champions

simply because it is a combination of essential grains calculated to not only sustain life but when fed regularly will develop your birds faster, make them stronger, healthier and more striking in appearance.

Read what Mrs. F. Forbes, the owner of champions, has to say about CORNO HEN FEED:

The Corno Mills Co.,
East St. Louis, Ill.
Gentlemen: I neglected to say, as I wrote you in former letter, a great many breeders of white birds do not use mixed or dark grains of seed, claiming it gives the plumage a creamy or brassy appearance. At Nashville show, I was the only breeder in the South, 7 states represented, with an entry of 256 White Wyandottes—to break into Fishel's winnings of his champion prize winners of the world, and these birds were raised on CORNO HEN and CHICK FEED.

Yours truly,
Mrs. F. Forbes.

We don't ask you to buy "Corno Hen Feed" on faith, we want you to see it—then you'll buy it.

WE WANT TO PUT A SAMPLE

right into your own hands so that you can examine it—see how clean it is—and note the goodness of the grain it's made of.

All you have to do to get this sample is to drop us a postal giving us your name and address and that of your dealer.

If your dealer doesn't sell Corno Hen Feed, we will quote a price on any quantity delivered at your nearest railroad station.

THE CORNO MILLS COMPANY

900 Baugh Avenue

East St. Louis, Ill.

aunts, the White Wyandotte and all other colored Wyandottes and Rocks.

The Standard describes a beautiful bird, elegant and closely barred in all sections, nice absolutely yellow legs, red ear lobes, with a comb closely set to the head, having five serrations, weighing around seven pounds and perfect symmetry—just such a bird so many of you get orders for—and yet when we get an order for such a bird, we say, the man who orders such a bird is foolish. Why foolish? He has ordered a bird by the Standard, and there is absolutely nothing in the Standard that says such birds are not bred and cannot be bought. I cannot help but tell of a Silver Wyandotte hen that I once owned. She was the best colored bird of that breed I ever saw. She won first wherever shown, but when it came to laying eggs, especially fertile eggs, that is another story. She laid just fifteen eggs in twelve months and when I had an inquiry for an exhibition hen

she was for sale and was sold. The buyer showed her and she won time and again, but this was apparently "her long snit," for she laid less eggs for him than she did for me. According to the Standard she was a fine bird, just such as any man who thinks of going into the chicken business and wants the best ought to get.

Now, let us take the part of the Standard which tells us of "disqualifications." A bird possessing any of these disqualifications is "no good"—in fact, it is doubtful if it is good to eat. Technically this is what disqualifications means.

In no part of the Standard is any opening left for a bird that is disqualified. No matter how typical in shape and size, no matter how healthy and vigorous. If there is any semblance of white in the ear lobe of a Plymouth Rock or a pair of legs that are not absolutely yellow, or a red feather in the hackle, no matter if it is a hen with a

laying record of over 200 eggs per year, she is barred from the cherished circle of thoroughbred poultry. The Standard says the color must be just so, and all other good qualifications go for naught.

Fine feathers make fine birds, but of such is not the kingdom of chicken heaven.

I believe the American Poultry Association should broaden out and that it can broaden out broad enough to take in thousands and thousands of poultry raisers by giving them primer lessons to start with and let them gradually work up through the first reader, second reader, third reader, etc., and where we see now actually putting into circulation 8,000 or 10,000 Standards, we will be circulating ten times that many. In this way we will have ten times as many fanciers as we have now and ten times as much interest in the pure bred poultry as there is now. We cannot do this with the present standard. In fact, I have not the presumption to suggest how this could be done best, but I believe a great deal can be done through a Standard which would elaborate on the good qualities of the various breeds—one that would be explicit as to how serious the different defects may be. A Standard that would be some practical use to the thousands and thousands of men and women who are breeding chickens, not so much by saying less on the beauty value of Standard bred fowls as by saying more on the practical and utility question.

IMPORTANT.

Resolutions Adopted by the Executive Board of the American Poultry Association.

The secretary of every local association should recognize the importance of membership in the American Poultry Association so as to be in line to derive some of these benefits. These medals are valuable and will prove a drawing card, as the competition will be open to the world.

Moved by Grant M. Curtis:

Seconded by R. V. Hicks.

That this board authorize its Committee on Medals and Diplomas to obtain prizes on a grand prize gold medal, which medal shall contain not to exceed twenty dollars' worth of gold; also on a sufficient number of silver medals of appropriate size and design to enable this Board to offer annually a grand prize for the best cockerel in a group to be composed of the American, Asiatic, Mediterranean and English breeds, a silver medal as a special prize for the best cockerel in each variety of the above described group, and a diploma as a special prize on the best male bird less than one year old in all varieties of such breeds of standard fowl as are not named herein; provided that these American Poultry Association grand and special prizes shall be offered only at poultry shows held in branch territory by associations that are associate members of the American Poultry Association; that but one grand prize and set of specials may be offered in a single branch territory during one year; that such prizes shall not be offered two years in succession, at the same show, where branch territory consists of one state or province and where branch territory consists of two or more states and provinces, said prizes shall be offered first in one state or

in address should notify the secretary immediately.

The secretary was instructed to procure a seal for the association and was authorized to use this seal on all membership certificates issued and judges' licenses granted.

Proceedings of the meeting held at Auburn, N. Y., January 10 and 11, 1907, are now being mailed to the members. The copy for these proceedings was placed in the hands of the printers by the late T. E. Orr before his illness.

The proceedings of the Niagara Falls meeting are now in the hands of the printers and a copy will be mailed to each member shortly.

The secretary has tendered his resignation as secretary-treasurer of the National White Wyandotte Club. H. P. Rankin, of Hartington, Neb., having been appointed to fill the vacancy.

The Executive Board instructed the committee on selection of seal or emblem to confine themselves to poultry and poultry topics in preparing design for emblem and button.

The American Poultry Association will be officially represented at the Jamestown Poultry Show by the secretary and such other officials as may find it possible to be in attendance. A poultry institute program is being prepared by the management that will interest and instruct the fanciers attending.

The Ohio branch of the American Poultry Association will hold their annual mid-winter show at Columbus, O., during the week beginning February 10, 1908.

C. M. Bryant, president, has under consideration the appointment of a committee of three, who are to organize a Bureau of Lecturers and report at the November 4 meeting of the Executive Board.

All questions concerning the interpretation of the Standard are to be referred for decision during the interim between meetings to the following committee: T. F. McGrew, chairman; Theo. Hewes and Ross C. H. Hallock.

The territory of the United States and Canada was apportioned by the Executive Board to the following members, each to be a committee of one in the territory designated on local poultry shows and poultry show rules, the duties being to secure as many associate applications for membership as possible and distribute all information possible:

Michigan and Wisconsin—George S. Barnes.

Iowa—Thomas F. Rigg.

Northwest branch—George D. Holden.

Indiana, Illinois, Kansas and Pacific Coast States—Theo. Hewes.

Ohio and Pennsylvania—S. T. Campbell.

South Central branch—Reese V. Hicks.

Massachusetts, Rhode Island, Vermont and Maine—C. M. Bryant.

New York—Grant M. Curtis.

Canada—H. B. Donovan.

California—Miller Purvis.

Connecticut—D. A. Nichols.

All other states—Ross C. H. Hallock, Secretary.

One of the large poultry supply houses of Chicago is in the market for a poultry food correspondent—a young man who is willing and energetic. Anyone desirous of making application for this position can secure full information by addressing American Poultry Journal.

Eggs all Winter

If You Feed Cut Green Bone

It's easy to keep your hens laying all winter if you feed fresh-cut green bone. It beats the world as an egg-producer and health promoter.

HUMPHREY GREEN BONE AND VEGETABLE CUTTER

cuts every kind of raw bone quickly and easily. The only bone cutter with an open hopper free from springs and complicated parts. Sold on a positive guaranty to cut more bone, in less time, with less labor than any other, or your money will be refunded. Don't buy a bone cutter until you have investigated the merits of the Humphrey. It will pay for itself in the feed it saves—to say nothing of the increased egg production. We charge nothing extra for a free trial.

Send for Catalogue of Humphrey's Poultry Helps—Bone Cutters, Clover Cutters, Brooders, Grit Mortars, etc.

JAMESTOWN POULTRY SHOW.

What promises to be the biggest and most successful poultry show ever held in the United States will be opened at the Jamestown Exposition, October 22, and lasting ten days. The show will be held in one of the largest buildings at the exposition and one that is admirably adapted to the purpose. It will contain all modern conveniences and appliances, so that no fancier need fear that his birds will not receive the best possible attention.

A winning at Jamestown will mean the best on the continent, and realizing this significant fact, poultry fanciers and breeders all over the United States, Mexico and Canada are preparing to send their birds to this show.

In addition to the regular cash prizes, which will be of unusual value, several handsome silver cups have been given, among them the \$100 Corno cup presented by the Corno Mills, of East St. Louis, Ill., which will be awarded to the exhibitor of the best and largest display of any one breed of birds.

The Jamestown show will be the first big contest in which birds from the North, South, East and West will come

together in large numbers and the results will necessarily be watched with the greatest interest by breeders all over the country.

As in all shows of the sort the entries will be by no means confined to live exhibits. A number of the larger poultry journals will have booths in the building, while manufacturers of poultry foods and dealers in all appliances incident to "egg culture" will be prominently represented.

The management has been placed in charge of John A. Murkin, Jr., of Nashville, Tenn., who has put himself in communication with the larger poultry people in the country, all of whom have expressed themselves as enthusiastic about the show.

MINNESOTA STATE FAIR.

The Minnesota state fair, held September 2 to 7, was a very successful affair in its poultry department. Their new poultry building is certainly a stride in the right direction, being the largest and best poultry building in the United States. Leslie Parlin, superintendent, and Ralph Whitney, assistant, assumed their duties in a creditable manner, and

we hope to see them at their posts another year.

Quality of stock was good throughout, although young stock as a whole was not matured. Clement & Fike, of Libertyville, Ill., showed the best string of matured young stock in White Wyandottes, cockerels and pullets, to weight September 1; it was a surprise to the Minnesota breeders.

T. E. Hale showed a fine string of Barred, White and Buff Rocks.

E. G. Roberts was on hand with a carload of his sixty varieties, and carried off many ribbons.

Sanitary Poultry Company, Minneapolis, Minn., made a fine showing with White, Golden, Buff and Silver Wyandottes and also S. C. R. I. Reds.

A more sociable, jolly lot of breeders we never met before at a state fair.

The Minnesota state fair of 1907 will go down in history as being a complete success.

INDIANA STATE FAIR.

The poultry exhibit at the Indiana state fair was not as large as in former years. This is owing to the fact that they are now charging an entry fee of 25 cents a bird, whereas in former years all entries were free. J. Newton Brown acted as superintendent, ably assisted by Ed B. Murphy, of Carmel. One of the features of the fair was the school for poultry judges conducted by Theodore Hewes. There were six students this year—all bright, intelligent fellows—that will make good judges. We do not think that there is anyone more qualified than Mr. Hewes for this important work.

White Plymouth Rocks were well rep-

WILL YOUR BIRDS CARRY OFF A PURINA FEED PRIZE CUP?

Poultrymen! Attention Everywhere

Are you going to enter your Poultry at any Poultry Show this Fall?

Here is an opportunity to compete for the handsomest CUP ever offered a poultry raiser.

It's a beautiful Silver Cup—Gold Lined and handsomely engraved—height 10½ inches without the base.

At an enormous expense to us we have arranged with the Secretaries of leading Poultry Shows all over the country to offer these CUPS as PRIZES for birds securing the highest number of points—and each Secretary is supplied with entry blanks which he will send to you for the asking.

REMEMBER THE NAME and be sure and enter for the right Cup. It's

The Purina Feed Prize Cup

offered by the manufacturers of the celebrated Purina Poultry Feeds—the standard of all Poultry Feeds.

The practical poultry raiser has found it economy to buy the best in feed—and that is why so many Checkerboard bags of PURINA can be seen today on successful Poultry Farms. There's no deception about PURINA POULTRY FEEDS—no drugs—no grit—no damaged grains—only pure grains and seeds of a large variety, which makes a balanced ration. If your grocer or dealer can't supply you with these Quality Feeds write us for samples.

Amatite

ROOFING

Why it Needs No Paint

The main weakness of most ready roofings is the fact that they have no mineral surface, and therefore need constant painting or coating to keep them tight.

Instead of a smooth skin coating made to receive a coat of paint, Amatite has a rough surface of small particles of hard siliceous rock such as is seen in quartz or other hard stone when examined under a microscope.

This mineral matter is chosen for its weather resisting qualities. It is firmly embedded in the surface of the roofing.

On the steepest roof the flow of water will not be strong enough to loosen these particles. This surface does not need paint to protect it from the weather. It will last for years.

The extremely low cost of Amatite with its effective protection and long service, without painting, care or repair, make it the most economical ready roofing yet devised.

Two representative buildings showing the handsome, clean appearance of Amatite on the roof are illustrated herewith.

The following letter from the

Amatite on one of the great Bellemeade Farm buildings at Bedford, Mass.

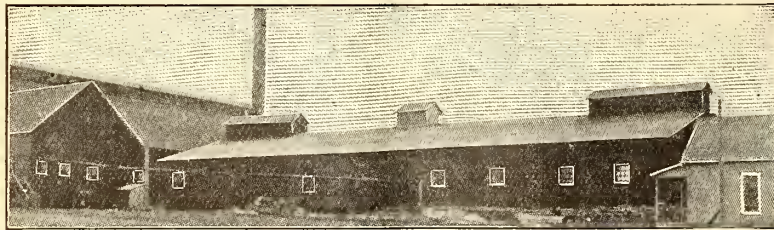

There is no reason in the world why you should buy a roof that needs painting.

Paint is a makeshift to help preserve the material on which it is used and will only give limited service at best.

The roof that you have to paint every two or three years is the roof that is going to leak if this care and expense are overlooked.

owners of one of these roofs is typical of the thousands of letters which we have received in praise of Amatite.

Gentlemen: I am very pleased to be able to state that the Amatite has been entirely satisfactory, and I would not hesitate in recommending it to any one in need of roofing material. Yours truly,
CANEY GLASS COMPANY.

Partial View Caney Glass Company's Plant. Roofed with 55,000 Square Feet Amatite.

The need of painting is proof of weakness. It is not the roof that protects, it's the paint. If you forget to put the paint on, or for economical reasons omit doing so, you have a leaky roof. Amatite Roofing requires absolutely no painting or coating of any kind during its life.

Booklet and Sample of Amatite will be sent free on request if you drop a postal to the nearest office of THE BARRETT MANUFACTURING CO., New York, Chicago, Philadelphia, St. Louis, Cleveland, Cincinnati, Allegheny, Minneapolis, Kansas City, New Orleans, Boston, London, England.

resented. U. R. Fishel, Hope, Ind., carried off most of the ribbons, namely, four firsts, four seconds, three thirds. Buff Plymouth Rocks, A. L. Weckler, Bunker Hill, Ind., won 2 cock, 3 hen, 2 pullet, 2 pen, and the most coveted prize of 1 cockerel. Peter Hurt, Thorntown, Ind., won on Buff Leghorns two firsts, three seconds, two thirds. Mr. Dipple won most in White Wyandottes. Mr. Carter took several blue ribbons in Buff Orpingtons.

The incubator exhibit was larger than ever. The Sure Hatch Incubator Company had a large attendance from morning till night. Miss Joan Vail was in charge. She reports many sales. The Chambers Incubator was in charge of J. E. Chambers. They have added many new features to their machines this year. The Petaluma Incubator Company was in charge of W. A. Eschbach, their eastern representative. He reports that he booked more orders, had more visitors and that they have better prospects in sight than at any previous time.

Most prominent visitors at the fair were: Mr. and Mrs. Day, of Fillmore, Ind.; C. E. Spangh, Rugby, Ind.; Mr. and Mrs. U. R. Fishel, Hope, Ind.; J. C. Fishel, Hope, Ind.; Mrs. Theodore Hewes, Indianapolis, Ind.; Miss Mayme Hayes, Indianapolis; Charles V. Keeler, Wilmemac, Ind.; Joe Coleman, Belleville, O.

FREDERICK, MD.

The annual fair of the Frederick County Agricultural Society will be held October 22-25, 1907. The poultry show in connection with the fair will be larger and better than ever, the department being enlarged and all facilities improved. O. C. Warehime, secretary.

CONCORDIA, MO.

The second annual show of the Concordia Poultry Association will be held November 21-23, 1907. E. C. Branch, judge. John F. Burns, Secretary.

SOMERSET, PA.

The first annual show of the Somerset Poultry and Pet Stock Association will be held November 26-29, 1907. F. W. DeLaney and W. T. Phillips, judges. Ed M. Shaffer, secretary.

DAVENPORT, IOWA.

The Tri-City Fanciers' Association will hold its third annual show November 25-30, 1907. F. H. Shellabarger and W. G. Warnock, judges. W. H. Keeley, secretary, Rock Island, Ill.

CHILLICOTHE, MO.

The Livingston County Poultry Association will hold their first annual show, November 26-29, 1907. Adam Thompson, judge. F. W. Hallett, secretary.

EASTERN LANGSHAN CLUB.

The Eastern Langshan Club was recently organized at Springfield, Mass., and the following officers elected: President, P. P. Ives, Guilford, Conn.; vice president, Henry Cundell, Englewood, N. J.; secretary-treasurer, John Aldrich, Springfield, Mass.; directors, J. H. Baldwin, Plantsville, Conn.; and E. T. Gibson, Nashua, N. H. Every breeder of

this grand variety is invited to join this association. Address all communications to John Aldrich, secretary, 308 Court Square Theater Building, Springfield, Mass.

ONARGA, ILL.

The annual show of the Onarga Poultry and Pet Stock Association will be held November 26-29, 1907. T. M. Campbell, judge. G. H. Townsend, secretary.

BANTAMS AT MADISON SQUARE GARDEN.

The vote for judge of Bantams at Madison Square Garden, December, 1907, resulted as follows:

C. M. Smith, Brooklyn	34
H. J. Quilnot, Johnston, N. Y.	12
L. P. Graham, Philadelphia, Pa.	11

Total 57

TO THE SECRETARIES OF EVERY SHOW IN THE UNITED STATES AND CANADA.

If you will insert the following notice in your premium list or catalogue and send to the secretary a copy of the same the Buff Rock Club will forward the ribbons.

The American Buff Plymouth Rock Club will give four handsome silk ribbons,

- One to the best shaped male.
- One to the best shaped female.
- One to the best surface colored male.

One to the best surface colored female.

Only members whose dues to July 1, 1908, have been paid are eligible to compete. Or new members whose application for membership, with \$1 fee, has been forwarded to the secretary before the opening of the show.

Full information in regard to the club and literature can be obtained upon application to C. A. Morton, secretary, 510 Chamber of Commerce, St. Louis, Mo.

ANNUAL MEETING OF THE NATIONAL S. C. BUFF ORPINGTON CLUB.

The next annual meeting of the National S. C. Buff Orpington Club will be held in connection with the Cleveland Fanciers' Club show January 27 to February 1, 1908, at Cleveland, Ohio. Cleveland is centrally located between the large national shows of the east and west and has the best of shipping facilities, so that breeders from almost any section can reach it without having their stock exposed any great length of time on the road.

The Cleveland Fanciers' Club will put up a large list of specials on the S. C. Buff Orpington class and in addition to this the club will increase the list of specials to such an extent that it will pay every breeder of Buffs to come after his share of the prizes. It will no doubt be the largest list of specials ever put up on the S. C. Buff Orpington class at any poultry show in America.

All Buff Orpington breeders should send a few birds to this show, where the best Buffs in the east and west will come together in friendly rivalry to decide where the best birds belong, and give the winners a reputation which could not be obtained from showing at any other show this season.

If you are not already a member, better join at once, as only club members will be allowed to compete for the specials put up by the club. Application slip, 72 page catalogue and special offer to join now will be mailed upon request to the secretary. Will H. Schadt, secretary, Goshen, Ind.

SUPERIOR TRAP NESTS CHANGE HANDS.

This is to certify that I have just closed a deal with the Hoffman Poultry Supply Company, of Waverly, Ala., by which they now have full control of my patent on the Superior Trap Nests.

My business in Trap Nests and in Thorngrebbred Poultry has grown to such an extent that I cannot longer carry on both lines and give each the personal attention that it demands. I have, therefore, disposed of the Trap Nests and will give my entire time to the breeding of the Bickerdike White Rocks, at Pleasant View Poultry Farm, Millersville, Ill.

In transferring to the Hoffman Poultry Supply Company my patent right, good will, etc., I solicit for them the same kindly treatment by the poultry fraternity that I have received. They will keep up the same high standard of the Superior Trap Nests that has characterized them in the past. They have excellent facilities for their business and will give their customers a square deal.

I wish to extend my thanks to all my old customers who have helped by their patronage to extend my business to its present condition. J. A. Bickerdike.

"Ringlets" Are The Corner Stone

To Success In Barred Rock Breeding

They are the universal standard for matchless quality, and none can fail of success who breed this strain.

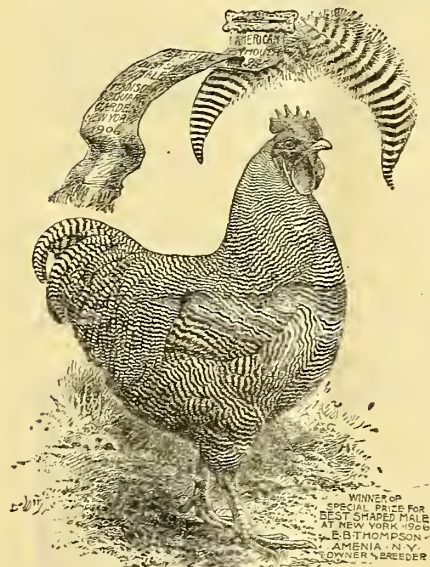

The "Ringlet" record at New York since 1887, covering a fifth of a century, is unexampled, and birds from my farm or hatched from my eggs are winning the leading prizes at the world's greatest shows with scores running as high as 94½, 95 and 95½. They have won and made money for others, they will win and make money for you.

The Peerless "Ringlets" Stand Alone

The leaders of all Barred Rocks in North America. They have an international leadership; they encircle the globe and are bred in every land and country where Barred Rocks are known. Every factor known to the science of Barred Rock breeding has been used to bring my "Ringlets" to their present matchless state—

The Ideals of the New Standard of Perfection

Exhibited by me personally at New York they have won a grand total of 101 prizes, 48 of these are firsts and specials, being more firsts and special prizes than won by any competitor in the history of the show. These specials include the \$100 Champion Challenge Trophy (won three times), the \$100 Association Cup (won three times), the American Plymouth Rock Club National Cup, the \$100 Sweepstakes Cup offered by the president for best Plymouth Rock cock, cockerel, hen and pullet any variety, the Harding Challenge Cup for best exhibition pen, and many others.

THE EMPEROR OF THE BARRED ROCK WORLD

Winner of the Premier Special Prize for Best Shaped Male at Madison Square Garden, New York, 1906

If you desire to win, I can help you; if you want to breed winners, I can sell you the birds correctly mated to produce high scorers. 1000 grand breeding cockerels for sale; one of them will improve your stock. I will make you a choice and personal selection. Elegant hens and pullets for sale in any number; special low prices on large lots. Show birds fit to win in the fastest company. Splendid new 48-page catalog mailed upon request; it is full of original pictures of New York winners from life.

Woman's Home Department

MABEL BATES WILLIAMS, Editor

This Department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others, a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it. All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton Street, Chicago, Illinois.

IN THE FALL.

So fast has the summer gone, with its many duties and pleasures, that fall is upon us before we realize it. While the thorough housecleaning of the year is usually done in the spring, the careful housewife notices that when October approaches the house shows signs of accumulated summer dust. It has been impossible to keep all the flies out of the house and the weekly clean-

ing and sweeping days, satisfactory as they were, have still left much to be desired in the way of preparing for winter. As a rule it is not necessary to give the house such a going over as it received in the spring, and the majority of housekeepers make it a practice to lift the carpets but once a year. The use of large rugs is becoming more and more common in country as well as city homes and in this way much of the heavy work of cleaning is avoided,

as the rugs can be easily lifted and cleaned not only once but many times during the dusty months.

* * *

Much of the illness which visits our homes can be directly traceable to neglect in the airing and cleaning of the cellars. Not only should every cellar receive two thorough cleanings every year, as well as occasional sweepings and dustings, but it should be watched with the greatest care throughout the entire year, and no mold or damp be allowed to form. It goes without saying that no neat housekeeper will permit vegetables to decay if she knows it, yet occasionally one will roll away into some dark corner and fill the air of the entire house with its unwholesome, typhoid-breeding germs. A fortune awaits the man or woman who will discover some way of admitting fresh air and sunshine freely into the cellars of the land.

* * *

As long as we must have the present day cellar it should have a cement floor

"Her Egg Basket Is Always Filled"

Don't You Want More Eggs?

YOUR hens can't lay eggs in abundance, unless they have egg-making food, in abundance. That's true because every atom they use in making eggs must come from the food they eat. It stands to reason then, that for the best results you must feed foods rich in egg-making materials. What are they? Let us see—

Nature knew what she was about when she made Cock, Hen and Chick relish a nice, juicy worm or a good, fat bug above everything else.

They relish such food, because it is rich in what the professors call "protein"—and protein is what fowls need, not only to make eggs, but also to make bone, muscle, flesh and feathers, as well as to maintain vigor and vitality.

That is why the hen craves bugs and worms—or some such food rich in protein.

It's a natural instinct for that something which builds up eggs and maintains good conditions.

* * *

Now, animal matter or foods, are rich in protein, while only limited quantities are found in the grains and vegetables usually fed.

But hens don't get worms and bugs in winter nor when yarded.

Therefore you must provide something to take its place if you expect to get the best results from your flock.

What is that "something?"

The best thing yet discovered is raw, green bone—the fresh trimmings from the meat market—bones with meat and gristle adhering—fresh cut and uncooked.

Analysis shows that such raw bones and gristle—beef, pork or lamb—contain the same food elements as the bugs and worms.

They therefore make a perfect substitute—not something "almost as good," but identically the same. A food rich in protein, and which costs but little more than the labor of cutting it.

It contains more than four times the protein and egg-making materials of grain, and is rich in all the elements that go to make eggs, bone, flesh and feathers.

That is why it makes hens lay as

nothing else will:—Why it improves the vitality of the entire flock;—Why it makes red combs, bright eyes and glossy plumage,—Why it enables your flock to produce more fertile eggs, larger hatches and stronger, livelier chicks.

Why it promotes growth and development, giving you earlier broilers, earlier layers, and larger market fowls,—Why it more than doubles your poultry profits.

It is cheapest because it is richest in the food elements fowls most need, and because it costs you but little more than the labor of cutting it. It is the best because it contains these elements in their most digestible form, and you know exactly what you are feeding—as you cannot know when you use so called "beef scraps" or the ready-mixed commercial foods, or the advertised "poultry foods" made from secret formulae, for which such extravagant claims are made. You have to buy them "on faith;" you don't know what they contain.

Fresh, raw bone is greatly superior to "beef scraps," because the cooking and embalming and preserving and drying of the scraps destroy nearly all their value.

Experiment stations and thousands of poultrymen have proved the value of green bone. Can you afford to ignore such valuable food?

The best machine for preparing green bone is

Mann's (Latest Model) Bone Cutter

Mann's turns easily and rapidly, cutting all green bone with all adhering meat and gristle, never clogging; never leaving chunks or slivers, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that any one can use it.

Its open, hinged cylinder is easily cleaned and takes in large bones.

It is strong, durable and requires few repairs. We want you to try one.

10 Days Free Trial

No money in advance—no deposit—no red tape.

We send you a Mann's on your promise to give it a fair test.

Try one and see how good it is.

Our Free Trial Offer

To prove to you that it is all we claim it to be, we will send you any bone cutter you may select from our catalogue, on **10 Days Free Trial**—no money in advance. Just select the machine you want to try. We will ship it to you. If satisfied after the trial, buy it. If not, return it at our expense. **Send For Catalogue To-day** and make your selection.

No Money In Advance

F. W. MANN CO.,

if possible and the cement blocks which are so cheap and common nowadays make the best possible side walls. The open spaces in them allow the circulation of air and prevent the formation of the mold which is so common on wooden walls. But all of us cannot have new and modern cellars and one of the best things for such to do this fall is to give the walls a good coat of whitewash. Use plenty of unslacked lime for purifying the air, setting it around in boxes; as there is nothing better for absorbing dampness. A little copperas, sprinkled over it, will act as a preventive of bad odors, and better still is the use of liberal quantities of charcoal, which not only destroys odors, but acts as a disinfectant at the same time. Many people who are scrupulously neat in their living rooms forget that dust and dirt will accumulate as rapidly in the cellar as elsewhere. The next time you sweep the house include the cellar and take along a good sized dusting cloth as well. The improvement in the general appearance will astonish you.

* * *

If you would put the finishing touches on the cleaning, empty out all the odds and ends of tinware, of pots and pans and scraps of things which have been deposited in the cellar during the past year or two and dispose of them. Many of the things which are allowed to accumulate in nearly every home are of absolutely no use to the owner. They have been allowed to remain because they were "too good to throw away." Find some poor person who has been burned out, or some family which is in

actual need, give them the things which are still of use and send the rest to the dump heap. When this has been done you may feel that the fall cleaning is complete and that it has been more practical and thorough than any that has ever preceded it.

EXPERIENCE DEPARTMENT.

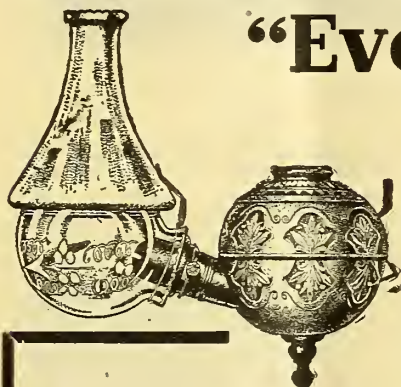

Mrs. D. E. H., of Freeport, Ill., is an experienced housekeeper and her hint is worth noting. She writes: "Now that winter is approaching, it is time to build that shelf on the outside of the kitchen window which you have been planning about all summer. Make it broad, with an outer rim, and bore a couple of holes in it for drainage. Fasten a piece of wire netting to the window frame, about a third of the way up, and bring it down to the edge of the shelf, and also around the sides and nail securely. This will keep away wandering cats and, like the famed window of Artemus Ward, "strain out the coarsest of the cold," and be all the protection that is needed for things placed there to cool, or to keep cold, during the daytime.

Mrs. Julia S., of Logansport, Ind., says: "The next time you buy oilcloth for the kitchen table get a little more than you need and make covers for your cook books. You can then wash them and remove the all too frequent marks of sticky fingers. When I make my annual batch of fruit cake—and, by the way, instead of going through the agony again at Christmas time, I steam some of the fruit cake and it makes a fine Christmas pudding—I always soak

the raisins and let them simmer gently until the skin is tender, then let them get nearly dry and put them in the flour sifter, with a little flour, and give the handle a few turns. It distributes the flour evenly over the fruit and there is no waste flour to make the cake stiff.

Mrs. A. J. C., of Pueblo, Colo., writes: "I have a chocolate frosting which my friends all like, and which is different from any I have ever eaten. I am sure the readers of the A. P. J. Home Department will enjoy it. I melt three squares of chocolate on an earthen pie plate on the back of the range, being careful that it does not burn. When it is soft enough to mash I add a tablespoonful of warm water, mixing it thoroughly. When it is cool add a whole beaten egg and last a cupful of powdered sugar, a little at a time, with a teaspoonful of vanilla. After it is all mixed I set it on the stove to get warm, as this gives it a gloss. This gives enough frosting for a three-layer cake, including the top.

Mrs. Mary B. M., of Trenton, N. J., sends the following helpful kitchen hints: "I used to break many glass tumblers and other glass dishes by putting them into too hot dish water until I learned to toughen them by covering them, when first bought, with cold water and letting it come slowly to a boil. After it reaches the boiling point the kettle should be set aside until the water is cold before removing the dishes. I keep my brooms in good condition twice as long as most people by always dipping them into hot soap suds after using them and then hanging

"Everyone Exclaims About Our Lights!"

"THE LAMPS are splendid. Everyone exclaims about the amount of light they give," writes Mrs. W. T. Reese, Tiffin, Ohio. "My City friends visiting here say they are as good as Gas. In fact, my home is now considered the best lighted house in the county. Why, when we go visiting our neighbors of an evening it is hard to keep from exclaiming about the poor light they have!"

The Angle Lamp is the *new* method of burning common kerosene oil, and is as different from the ordinary lamps in *results* as it is in *appearance*. It makes common kerosene the best,

the cheapest and the most satisfactory of all lighting methods. Safe and more reliable than gasoline or acetylene, yet as convenient to operate as gas or electricity.

THE ANGLE LAMP

is lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods a room with its beautiful, soft, mellow light that has no equal.

And yet the lamp *actually pays for itself*. For while the

ordinary round wick lamp, usually considered the cheapest of all lighting methods, burns but about 5 hours on a quart of oil, The Angle Lamp burns a full 16 hours on the same quantity. But send for our catalog "59" explaining the new principles employed in this lamp, and for our proposition for selling on

30 DAYS TRIAL

Wouldn't you like to have your home admirably referred to by your neighbors as "the best lighted house in the country"—if you *knew* such a light would cost so *much* less than your present system as to pay for itself in a few months use? Then write for catalog "59" describing The Angle Lamp fully and listing 32 varieties from \$2.00 up. It is free for the asking.

says: "Housecleaning is hard, at the best, but I find that I have some little ways of doing things which my neighbors like to copy, because it saves both time and strength. I always keep on hand a long stick—an old broom handle will answer the purpose—with a deep notch in it, which I use to lift the pictures off the picture hangers in cleaning time. It saves me many steps and much handling of step ladders. I never scrub paint or varnish, but wipe it quickly with a woolen cloth dipped

rugs, but faded upholstered furniture will look as good as ever if thoroughly beaten to remove the dust, and then washed with ivory or castile soap suds, rubbing it in with a hard brush and washing off with clear water. Then give a final going over with alum water. If upholstered furniture is too badly faded touch up the spots with a brush dipped in water colors. By the way, did you ever restore the color to faded artificial flowers by painting with water colors? This method works to a charm.

GO-WELL FARM

A Thorough Breeding Establishment

By breeding the best laying Barred Rock hens to the sons of hens that laid over 200 eggs in a year, my stock has been improved so that 2000 hens averaged 146 eggs each last year. Trap nests have been used exclusively for nine years. For eight generations no male has been bred from unless his mother laid 200 (or more) good eggs within a year.

FOR SALE: Tested yearling hens with individual records. Pullets and cockerels whose mothers have records of 200 to 255 eggs in 365 consecutive days.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Editor American Poultry Journal.

Dear Sir: Answer the following in next issue: My hens seem to have water in their throats as they make a gurgling noise when they breathe and often stretch their necks and discharge large quantities of milk colored fluid. They are white Wyandottes. Have good houses and care; have laid splendid all winter and are still laying some; they all seem to be affected. C. A. Bemidji, Minn.

Answer.—This is evidently sour crop. Give $\frac{1}{2}$ teaspoon of soda and $\frac{1}{2}$ teaspoon of sugar, add three tablespoons of water. Give this twice a day for a week.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions in your next issue: (1) Which is the best food for laying hens, blood meal or dried bone meal? (2) Is there any difference as a food in dried blood or blood meal? (3) About how much of the blood meal should be fed to one hundred hens and how often? (4) How much of the dried bone meal and

how often? (5) Is dried cracked bone the size of wheat grains or larger good to make hens lay? (6) What is the longest time one may keep fresh green bone in the summer time during hot weather? (7) Which is the best to mix with the mash for laying hens, bran or shorts? Richland, Kansas. Mrs. J. E. E.

Answer.—(1) Blood meal. (2) No. (3) About 2 oz. three times a week. (4) Two oz. three times a week. (5) Yes, but green bone is far better. (6) This should be fed at once and procured fresh every day. (7) Bran.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following in the next issue of your journal: (1) What breeds of fowls were the three highest winners in the largest egg contests in America of recent years? (2) Please state the number of pens entered for competition, as well as the number of eggs laid by the three highest winning pens. R. S.

Port of Spain, Trinidad. B. W. I.

Answer.—(1) S. C. Leghorns, R. C. Leghorns and American Reds. in the

If You Want More Eggs

If you want to get eggs more fertile,

Dept. D

PHILADELPHIA, PA.

order named. This is taken from the report of the Kansas Experiment egg-laying contest last year. (2) Seven different varieties in this contest. One pen of each variety. Egg record, 885-828-820.

Editor American Poultry Journal.

Dear Sir: Seeing columns in your journal used for information, I take the liberty of asking use of same: (1) I have a Barred Plymouth Rock hen which was in fine health and carriage up to the time I took her away from the little chicks she hatched, which was four weeks after hatch. The last three days of that time she laid an egg each day. From the day I took her away her tail fell and she has not the same carriage since. This is now nearly three weeks ago; she is also losing weight, being much thinner and feathers rough; also seems to be losing feathers on top of head. Walks around and eats well. Can you please tell me her ailment? (2) Also does scaly legs interfere in any way with health of hens or roosters. J. B. J.

Maplewood, Mo.

Answer.—(1) She is evidently suffering from liver trouble and should have a tonic of some kind. Give one of Carter's Little Liver Pills every other day for one week; also give a little of Douglas' Mixture in drinking water. (2) Scaly Leg does not interfere with the general health of the fowl unless allowed to continue for some time. This disease is very easily cured and should not be allowed to extend through the flock. A few applications of lard and sulphur will usually effect a cure in a short time.

Editor American Poultry Journal.

Dear Sir: Kindly answer in your question department the following: (1) I have a ten-acre farm which I intend to turn into a poultry plant early next spring. The ground slopes quite a little to the east. I intend to put two houses on it for a starter, 20x120. Now if I build them facing the south the east end would be about six feet from the ground. Do you think it advisable to build them facing the east, as the ground is quite level from north to south. Would the size houses I mention be O. K. for New York state? (2) Is there any practical device for catching chickens if you should want one when they are out in the field? (3) Why do poultrymen who have long houses yard each pen separate, when they have but one breed and the hens are kept for market eggs and not breeders? Would it not be better to have one large run than a lot of long, narrow runs? (4) What size incubator cellar should we build for 1,000 or 2,000 chicken farm? (5) As eggs are our principal object, would you advise Leghorns? (6) What brooding system is used on most large farms? (7) How many trees should we plant and what variety, the soil is sandy and there are a few apple trees on the place now. H. S.

Grant City, N. Y.

Answer.—(1) We see no objection to building the houses facing east and believe it is much better for you to do so in this case. The size of the houses is all right, but they should be divided into several pens with board partition from the floor to the roof. This will avoid draft and make the houses much warmer. (2) There is a device for catching chickens and we believe it is manufactured by the Keyes-Davis Company, Battle Creek, Mich. (3) Much better results are obtained where only a

small number of hens are penned together, and that is why so many of the large farms separate their fowls into small flocks. (4) A cellar 12x12 with plenty of ventilation will be large enough for your purpose. (5) We never advise what variety of fowls to breed for any purposes. (6) This is difficult to answer as there are very few farms that have the same brooding system. However, we prefer the individual brooders. (7) Plum trees thrive best in the chicken yard.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following in your next issue: (1) Should ducks have water that they can get into in order to have fertile eggs? (2) What is best to feed ducks during laying season.

W. K. Y.

Graters Ford, Pa.

Answer:—(1) This is not absolutely necessary, although it is much better. (2) Whole wheat and corn.

Editor American Poultry Journal.

Dear Sir: Please answer the following: (1) What is the cause of wry necks in newly hatched chicks? I had four hatch two weeks ago. (2) I have about ten chicks with the well known trouble of bowel disease. For a few days the excrement was a thin, whitish substance. Being told to give asafoetida (size of wheat grain) the color changed to a thin, brownish color, but chicks no better. Some of them seemed to have as full a crop in the morning as in the evening and some by turning them on their heads would vomit a stringy, water colored liquid. They would stand around with their feathers ruffled up, sleeping a good share of the time, and for about three days their eyelids seemed to be stuck fast. We put burnt alum in their eyes, since which time they have not been bothered in that way. What would you advise doing for them?

W. C. B.

Ogden, Iowa.

Answer:—(1) This is usually caused by too much or too little heat during incubation. It is also caused by breeding from unhealthy stock. (2) The trouble with your little chicks is paralysis of the crop for which there is no absolute cure. This is caused by the chicks getting overheated and suddenly becoming chilled. We have tried a great many remedies for this but never found one that did the work at all satisfactorily. When little chicks get chilled before they are two weeks old it results in either paralysis of the crop or bowel trouble or both and it is much cheaper to kill them and get them out of their misery than it is to endeavor to doctor them, for when they once get in this condition they never amount to anything, even though

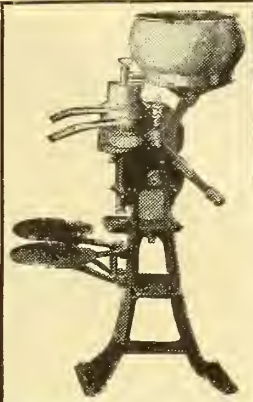

they apparently get over the trouble. We have used sweet oil with very good results, pouring a few drops down their throat and working the crop gently with thumb and finger, gently loosening up the substance and working it out through the mouth, after which we did not feed them for 24 hours, then gave them a little boiled milk to drink to which we added a small quantity of powdered cinnamon. After which we gave boiled rice for a few days.

Editor American Poultry Journal.

Dear Sir: Please answer the follow-

ing in your next issue: (1) Is hopper feeding better than hand feeding? (2) Is dry mash hopper feeding a good system of feeding? (3) Give directions for making this dry mash. (4) Also directions for making the hoppers. (5) Give directions, and illustrations, if possible, for making trap nests. Or refer to source where such information can be had. (6) Can green bone lawn clippings, alfalfa, etc., be fed to good advantage with the hopper method of feeding? (7) What should be

Continued on Page 774

THE Cream Separator CREAMERYMEN USE

Today over 98 per cent of the world's creameries use DE LAVAL separators. This fact means much to every cow owner. Without the separator creamery operation would be almost impossible. No matter whether the creamery is buying whole milk or cream, its success rests upon the centrifugal cream separator. Those who are buying whole milk skim it at the factory with DE LAVAL Power machines—those who are buying cream advise their patrons to purchase DE LAVAL Hand machines. The biggest and most successful creamery company in the world is buying cream from more than 40,000 patrons to whom it has sold DE LAVAL Hand machines, after many years of experience with all kinds of separators. Had the DE LAVAL not been the best and by far the most profitable separator for anyone owning two or more cows, this great creamery would never have taken the responsibility of placing them with its patrons. And this is true in hundreds of other instances, for creameries can be found in every part of the world having from a few hundred to many thousands DE LAVAL patrons. Wouldn't it pay you to find out why experienced creamerymen prefer the DE LAVAL to other separators? You may learn the reason by asking for a DE LAVAL catalog, or better still a DE LAVAL machine—to examine and try out at your own home free of all expense. Don't wait, but write us today.

Ideal Aluminum

LEG BANDS for Poultry and Pigeons are the acknowledged leaders. Firmest and most secure lock. Guaranteed to stay on. Price, post-paid, 12 for 15c; 25-25c; 50-40c; 100-75c. All supply dealers sell them. Sample band and B. P. Rock circular sent for 2c stamp.

Frank Myers, Mgr., Box 40, Freeport, Ill.

THE BEST LEG BANDS TO USE.

There is about as varied an opinion among poultrymen as regards what kind of leg band is best as there are different bands on the market.

It seems to us that the bands manufactured by Frank Myers, of Freeport, Ill., come about as near being the ideal leg bands as any we have ever seen: in fact, he calls them the Ideal Aluminum Leg Bands, from which it is seen that they are made of aluminum. This means they are light, strong and with the firm, secure method of locking they certainly combine every desired requisite of an ideal leg band.

On another page of this issue you will find Mr. Myers' advertisement, with an illustration showing styles of band and prices on different quantities. It is significant that these bands are the best on the market, because they are universally used by the most successful and prominent poultrymen.

Mr. Myers also makes an ideal Poultry Punch which is a winner. It is made of finest tool steel and will be sent postpaid for 25 cents. Look up his advertisement and send him a trial order. We know you will find his goods give perfect satisfaction. He has been in the business a good many years and has built up a good trade by supplying the best on the market for the money.

GREAT LAYING STOCK SALE.

In our advertising columns will be found an announcement of Go-Well Farm breeding stock for sale, and we call attention to it especially because that announcement means much to the poultry public.

That veteran writer, A. F. Hunter, who has visited the Maine Experiment Station and Go-Well Farm every season for years to keep himself in touch with the great work which Professor Gowell is doing in thorough breeding to increase egg production, says in the American Poultry Advocate:

"A breeding pen of these birds, with the accumulated momentum of many years' careful breeding behind them, gives one a great advantage in getting at once into great laying stock. Such a pen will be a splendid foundation to build upon. It is an unprecedented opportunity for starting right."

We are in receipt of J. W. Parks', Altoona, Pa., annual cockerel circular, which gives prices and descriptions of cockerels. Mr. Parks' stock needs no introduction to the readers of this paper, as his is conceded to be the oldest and greatest laying strain of bred-to-lay Barred Plymouth Rocks in America. Anyone thinking of improving the laying qualities of their flock will do well to send for one of these free circulars.

George W. Tracey, Kinderhook, N. Y., writes that his Rhode Island Reds won fifteen prizes, including three firsts and four seconds, at the late New York State Fair. Mr. Tracey is certainly producing some grand specimens in this variety. If you are looking for something that will win the ribbons for you write him and mention American Poultry Journal.

TIME TO FEED FOR EGGS

It's time right now to begin getting your hens and pullets in shape to lay early, and to keep it up when eggs are worth money. Don't trust to luck, but feed to help the hen.

Lee's Egg-Maker makes more eggs—we guarantee it—by furnishing the hen more egg-material.

It is largely granulated blood (deodorized), the most highly concentrated form of meat food, with roots, spices, and herbs in kind and proportion our years of experience proves to be necessary for increased egg-production. Takes the place of meat-food and at a saving of fully 20 percent in monthly feed-bill, if fed in proportion of 5 pounds of Egg-Maker to 100 pounds of mash or grain. One trial will convince you of its great value.

Germozone is a bowel regulator, the best cure for Roup, Colds, Cholera, and other similar diseases. Fowls like it—so will you when you see what it does for your flock. Tablet or Liquid. All dealers. Send for new free books on poultry—chock-full of chicken information, to

GEO. H. LEE CO., Omaha, Nebr.

General Agents: Howard L. Davis, 1315 Market Street, Philadelphia, Pa.; Fiske Seed Co., Boston, Mass.; Robinson Seed and Plant Co., Dallas, Tex.; Henry Albers, Los Angeles, Calif.; Portland Seed Co., Portland, Oreg.

The Cream of Cream Separators

The Sharples Dairy Tubular is the cream of cream separators—the pick of the whole bunch. Supply can waist low, you can fill it with one hand. All gears enclosed, dirt free, absolutely self-oiling—no oil holes, no bother—needs only a spoonful of oil once or twice a week—uses same oil over and over. Has twice the skimming force of any other separator—skims twice as clean. Holds world's record for clean skimming.

Bowl so simple you can wash it in 3 minutes—much lighter than others—easier handled. Bowl hung from a single frictionless ball bearing—runs so light you can sit while turning. Only one Tubular—the Sharples. It's modern. Others are old style. Every exclusive Tubular feature an advantage to you, and fully patented. Every Tubular thoroughly tested in factory and sold under unlimited guaranty. Write immediately for catalog J-206 and ask for free copy of our valuable book, "Business Dairying."

LEE'S
EGG MAKER

GETTING WINTER EGGS.

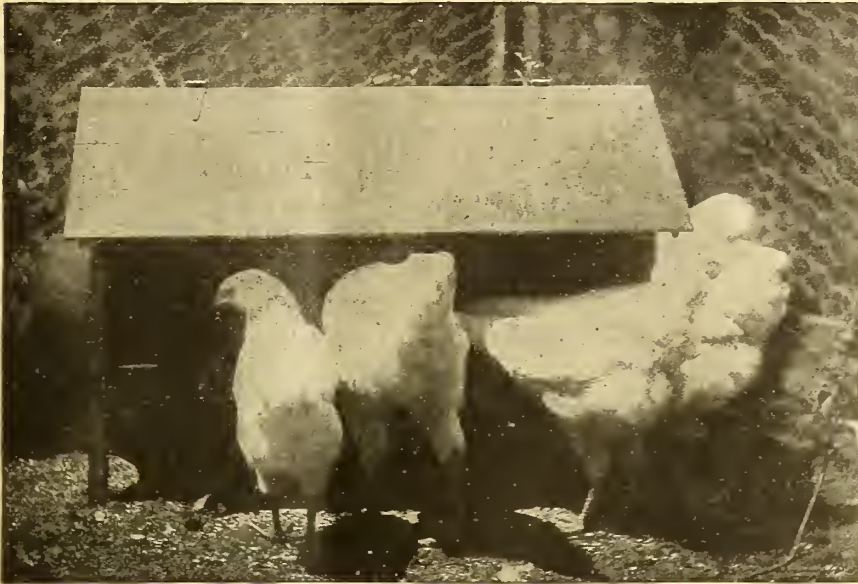

The season is now coming on when poultry raisers begin to think about the probable egg crop they will get during the winter time, and it is well to take time by the forelock in this matter and lay such plans as will assure one of getting the greatest number of eggs from the least number of hens and at the least cost. It is an admitted fact that it is the eggs that make the profit on the flock and it is the cost of egg making foods that cuts down the profit. Then certainly any method which will save on the feed bill and at the same time increase the profits is the one for the successful poultryman to follow out.

Thousands of flocks of pullets, or young laying hens, will begin laying between now and Christmas and the question which the progressive poultry raiser should consider is how he is going to manage his flock so it not only will pay for the feed the fowls eat,

and non-laying hens and how to make a flock of hens that will lay the most eggs at the least cost. Some hens are very good layers; some are fair layers; others are non-layers or drone, and so in order to make it pay you well you must cull your flock. The Potter System teaches you how.

So much in regard to selecting a flock of hens which are all good layers, and the next thing is to feed them so they will produce the greatest number of eggs, and this is where a thorough and systematic method of feeding comes into play. The Potter System of Scientific and Systematic Feeding covers every point in regard to proper feeding. This system teaches you how to hopper feed your fowls successfully and how to save half on your feed bill. The cut below shows a Potter Perfection feed hopper in use. The fowls take to it readily and thrive better on this method of feeding than any other way.

The Potter System is in use by thousands

but make him some profit for his time and labor in caring for them. Yearling hens are now admitted to be the best layers—that is, they will lay on an average more eggs than two, three or four-year-old hens—and so it should be the aim of every poultryman to have a good flock of pullets every year. If the eggs used in hatching have been from healthy, thoroughbred stock you are assured of having strong, vigorous young stock and as they grow and come on to maturity the question is, which are going to be the best and profitable layers; and this is where a thorough system of selecting the best layers and then proper feeding brings paying results.

The Potter System is the only recognized system which teaches the poultryman how to make positive selections of his laying

of poultry raisers in every section of this country because it means the saving of dollars and a more scientific breeding of poultry. T. F. Potter & Co., Box A, Downers' Grove, Ill., are offering this valuable system to poultrymen and their large advertisements are seen in all the poultry papers.

It would also seem fitting to mention here the line of Poultry House Fixtures manufactured by this same firm. For years their goods have been on the market and are now recognized as the most complete, convenient and sanitary henry equipment to be had. They issue a large 64 page catalogue fully describing their goods. If you want to know more about this line of fixtures and also the selection of layers and feeding for winter eggs, do not fail to write them at the address given above.

EUREKA HARNESS OIL
Makes harness proof against heat and moisture. Gives a glossy black finish. Prevents rot. Imparts pliability, strength and durability to leather. Saves bills and mishaps. Keeps a new harness looking new and makes an old harness look like new. Contains nothing rough to cut and chafe. For axle troubles use

We also make the famous Mother Hen Brooder.

**A VISIT AMONG THE POULTRY
FANCIERS OF PRINCETON AND
VICINITY BY A. H. ASCHE.**

Princeton is a beautiful city of about 6,000 inhabitants on the main line of the C., B. & Q. R. R. Our interurban railway gives us connections with some of the important cities east of here, also several lines of railroads. This gives breeders splendid shipping facilities and this is quite an item, especially in shipping exhibition specimens. It is here where the Bureau County Poultry Association conducts an annual show, which is officered by breeders who have had years of experience in the show room. Quite a few of the members will be remembered by some of the older breeders throughout the country as members of the N. C. I. P. Association, which gained considerable prominence through their strict business methods of conducting their shows, which was shown by the entries amounting for several years to some over 1,300.

The officers and members of the B. C. P. Association are laboring hard to make this association one of the leading ones in the state and by noticing the increasing interest in fancy poultry and the large number of new breeders their efforts have not been in vain.

This association owns their own coops, which with the splendid hall in which the show is held, makes the birds show up in the best possible condition. A few novelties have been tried and have given the best of satisfaction. One thing which gives every breeder, whether large or small, or no matter what variety they exhibit, an equal treatment is in the way the judges do their work, which is by one taking the cocks and pullets, while the other takes the cockerels and hens. This gives exhibitors cards or scores on their birds by two judges instead of one and if the exhibitors should have any preference they are at least favored to a certain extent with their choice. Another thing, and one which is greatly appreciated, is the novelty of printing the silk ribbons stating the breed, sex and pen on the ribbons, so that when the ribbons are displayed visitors can see at a glance on what specimen the exhibitor won. While most of these things are an extra expense, it has been the means of having exhibitors return each year, knowing that everything possible is done to please them and strict business principles are adhered to.

It was our intention of visiting every breeder in this vicinity, but we found our time limited, which compelled us to omit quite a few, among them some of the prominent ones and old timers, which visit we should have enjoyed very much and should have been delighted to furnish your readers with information regarding their birds and their business. We may, however, be able to do so later.

H. R. Brown, of Princeton, Ill., is one of the leading attorneys in the city and that he is held in high esteem by the fraternity is evidenced by the fact that he has acted as master in chancery for several years, an office which has great responsibility connected with it, for the business passing through his hands amounts to some \$250,000 or \$300,000 a year. His brother, C. C. Brown, is county superintendent of schools. They breed a different strain of birds, so are in position to furnish birds not akin. They breed Black Langshans and make a specialty of fine exhibition birds. H. R. Brown won at the Chicago show in 1906 first cock. He still owns this bird and when we visited his yards we found this bird in the pink of condition, while among the young birds we found a number of earlier ones enough developed to show their fine shape and color. It is not very often we find birds with such color as Mr. Brown's. In this respect he is very strong and we found a number of them with that nice dark under color, without any bronze or metallic in surface color. If these birds will not make a strong record for Mr. Brown in the show room it will be a surprise, for it is a settled fact when Mr. Brown exhibits at Princeton, where competition is always strong in Langshans, he always carries off his full share of the ribbons.

Anyone interested in Black Langshans should not miss writing Mr. Brown, for his birds will please you and you will find him a gentleman to deal with.

O. J. Piper, of Princeton, Ill., was for the third time unanimously elected president of the Bureau County Poultry Association. Under his strict business methods the association has prospered, for which reason every member was in favor of retaining him in office. He owns a nicely located farm about three miles from the city, where he breeds Percheron horses, Shorthorn cattle and Poland China hogs. With these he has

W. H. Wiebke, B P 2001, Ft. Wayne, Ind.

been very successful in winning his full share of ribbons at several leading fairs.

In the poultry line he breeds Barred Plymouth Rocks and Mammoth Bronze turkeys. He takes particular fancy to his turkeys, which he informed us he is breeding on three different farms. He is one of the old standbys, exhibiting at the first poultry show held in Princeton in 1895, and was one of the five who started the association at that time. During all these years he has continually bred the same varieties. His sales annually amount to considerable. His turkeys and Rocks are always among the winners whenever he exhibits. Mr. Piper is a very busy man or we would have been able to give a fuller description of his birds had he had the time to show us some of his birds. We procured what little information we did while someone was waiting to see him at his barns on business. We have seen his birds at quite a number of shows and they always attract attention on account of their size, which is a great item, especially with turkeys, besides their fine plumage.

H. A. Gleisher, of Ohio, Ill., breeds Barred Plymouth Rocks and Mammoth Bronze turkeys. While he is probably not as well known among breeders as some others, he has had considerable experience in exhibiting. For several seasons he was employed in this capacity by W. N. Smith, who will

be remembered by a great many breeders as one of the most prominent breeders of these varieties. After Mr. Smith's death Mr. Gleisher procured his farm, which he managed for a year for the heirs, after which when the stock was sold it gave him an opportunity to buy what birds he wanted at private sale, and that he knew what he wanted is shown by the fact that he won with his birds at the Bureau County Fair first cockerel and first pullet, besides several other prizes, while at the Sandwich Fair he won every first possible. While at his farm he had about 600 young Barred Plymouth Rocks be certainly has an ideal place for raising chickens—lots of shade, which young birds enjoy so much during the warm weather. His chicks certainly show quality. We found some a pleasure to handle, for they showed the narrow, straight, dark barring down to the skin, which is very difficult to produce and for which every Barred Rock breeder is striving.

While his breeders were in molt, they still showed that same dark, narrow barring without any brassiness in surface color. He will have some fine exhibition birds for sale and with his reasonable prices they will not last long. With such a lot of birds to select from he is in position to please his customers. His motto is to not send out anything unless he knows it is right and his judgment can be depended on.

G. W. Smith, of Kasbeer, Ill., is a brother of W. N. Smith. He was for several years engaged in a general merchandise business, together with his brother, from which he retired about a year ago. He owns a splendid farm containing fine improvements of up-to-date patterns. He has his farm rented, so he is in a position to give his entire time to the poultry business. He breeds Barred Plymouth Rocks only. Two of his yards were formerly owned by his brother, W. N. He engaged Judge J. M. Rapp, of La Moille, to mate his yards for him. We have seen a number of birds produced from Mr. Rapp's mating and have always found them to be equal to the best. We saw his yards early this spring and found a number of his birds good enough to go into almost any show room. When we visited him this time we found about 500 young Barred Plymouth Rocks running around in the orchard. They certainly showed that the matings were right. A distinct Barred Rock is admired by any fancier, no matter what variety he may breed, and we certainly found them here, although the majority of his birds were not well enough developed to say just what they will make. We feel satisfied Mr. Smith will with such a number to select from have some No. 1 birds to offer his customers. He will not misrepresent any bird and although his name may be new to a great many he is not new at the business. He has bred birds for his brother prior to his death. Any order entrusted with him will receive his best attention.

C. A. Balcom, of Ohio, Ill., is one of the leading hardware merchants of Ohio, one of the most wideawake little cities in the county. We have visited the store on former occasions, but found Mr. Balcom as a rule very busy, which is an indication that the people appreciate his up-to-date, strict business principles. Although a very busy man he can always spare a few minutes to talk chicken. His choice of color is buff, so he discarded his former variety and now breeds the Buff Wyandotte. His breeding birds have the blood of such birds as Wisconsin King, score 95½, and Maude L., score 96.

His birds are usually strong in color and they possess that smooth even buff to the skin, not like so many buffs that we find with uneven color or black in some sections. His birds are very free from this defect—in fact, a number of his birds are solid buff, without the slightest black or white in them. His young birds are certainly grand, some of them well enough developed to show their color, which in the majority of them showed the even buff, without any foreign color in them, the same as his breeders. He has only a limited number of young birds at home and he wants them to have plenty of range, so as to develop properly, so he has a number of them out on different farms. While he raises them mostly for his own pleasure, still he is like a good many fanciers—he likes to raise them good enough so others will want them—and in this he has been quite successful. He exhibited at several shows in 1906 and won forty prizes, seventeen being firsts. At the Illinois State Fair he won besides several other prizes first, second and third cockerel, and that these birds were worthy of it was evidenced by the fact when he sold his third prize cockerel to a breeder who later won first with him at one of our leading western shows, where competition was strong in buffs. Anyone wanting Buff Wyandottes will not miss it writing Mr. Balcom.

ROOF BOOK FREE

Illustrated **ROOF BOOK**, just off the press, tells how to lay durable, water-proof, weather-proof and fire-resisting roofs on residences, barns, cribs, poultry houses, outbuildings, stores, etc. How to cover old shingle roofs. STANDARD OIL COMPANY
(Incorporated)

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford

to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used for ceiling and siding. It comes to you straight from our own factory. Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated sheets 22x24 inches, \$1.55. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the

interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

We will supply you with a fine beaded ceiling, as ready to \$1.95 per 100 square feet, in sheets 24 wide and 6 long. They are excellent for ceiling and siding. Nothing up an old building a hand-siding. It makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building. We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices to these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron pipe and fittings, plumbing supplies, nails, etc.

Guarantee is back of all we sell.

GENERAL MACHINERY & SUPPLY CO., 549-559 STATE ST., CHICAGO

RUST-PROOF ROOFING CAPS.

The necessity of providing clean and comfortable quarters for farm animals has been repeatedly urged of late in the government bulletins. This is the highest authority we have on such matters and it is evident that the teachings have had a beneficial effect. There is a marked improvement in plans and materials in buildings for both farm poultry and stock.

Perhaps the best example of the new order of things to be seen is the large present use of ready roofing and siding. There has been and is now an enormous demand for a light, easily handled and applied, vermin proof and absolutely water proof ready roofing. Happily the demand has been met in Paroid, with a roofing with all the requisites and which is at the same time inexpensive.

The great drawback to ready roofing has been that the nails and tin caps used for fastening have quickly rusted out, causing leaks. The caps have been attacked by rust not only from above, but also from beneath, out of reach of protecting paint. The result is they are short lived.

This rust trouble, we understand, has now been fully overcome by a patented appliance. It consists of a roofing cap which is thoroughly rust proofed on both sides, above and below, and gives no chance for rust or corrosion. The nails used are also rust proofed. Incidentally, the caps are made square, which gives more binding surface and holds the roofing firmer than the round caps.

These new caps are the patent of F. W. Bird & Son, East Walpole, Mass., and are furnished only with Paroid Roofing. They fully justify the claims of the makers that Paroid makes a permanent roof with a permanent cap. Prospective users of roofing are advised to keep in mind "the ready roofing with the square, rust-proof cap." We believe samples not only of the roof, but of the caps and nails are sent on application. Address as above or apply to Chicago, Ill., or Hamilton, Ontario.

OVER OLD SHINGLES.

A great many farmers have buildings on which the shingle roofs are in bad repair. They are up against the question of how to fix them. If they use shingles it means nearly as much work to tear the old shingles off as to put the new ones on. Besides the new shingles will cost nearly twice as much as the old ones did when the roof was built, and they are not half so good. If the farmer is wise and economical he'll not use shingles at all; he will use "Vulcanite" Shingle Roofing, a ready-prepared roofing, which he can lay right over the old shingles. Don't tear off the old shingles but write to the Patent Vulcanite Roofing Company, 626 S. Campbell avenue, Chicago, Ill., for free information about their roofing and ask for their free roof book, "The Right Roofing and the Reasons Why." It will save you money.

We have just received a sample of the Security Sealed Leg Band from the Stapler Seed & Poultry Supply Company, of Pittsburg, and also a circular describing same. This band, rivet and all, is made from one piece of aluminum, it is free from rough edges, can be easily applied, and cannot possibly lose off, while to remove it necessitates the destroying of the band. Taken all in all, we are very favorably impressed with it and suggest that our readers write to the above concern for a sample band and further information if they want a really secure leg band.

Mrs. Everett Burnett, Waverly, Ill., is introduced to the readers of American Poultry Journal this month. Elsewhere will be found her ad of Black Langshans. She informs us that she has purchased the entire stock of William Turnbull, who has spent a great deal of time and money in getting his stock to a high state of perfection. Mrs. Burnett is now prepared to furnish birds fit to win in any show and solicits the patronage of our readers. Please mention American Poultry Journal when you write.

J. H. McDanell, proprietor of the Old Homestead Farms, Warsaw, Ky., is offering bargains in Columbian and Golden Wyandottes. Mr. McDanell is a new patron of the display columns of American Poultry Journal, but is not a new beginner at poultry raising, as he has been breeding these two varieties of Wyandottes for the past five years, and he has got his stock to a point of perfection where he feels justified in offering it to the readers of American Poultry Journal. Look up his ad and write him and mention American Poultry Journal.

MILK FOR FOWLS.

Milk for fowls is gaining rapidly in favor among poultrymen everywhere. Milk-fed chickens now bring a handsome premium in all markets, and as an egg producer skim milk is pronounced invaluable by the Maryland and other experiment stations. By many its value is placed at 75 cents per 100, and the only trouble is that skim milk in a fresh state is not within easy access of the great majority of poultry keepers. However, it can now be had, and even more cheaply, in dry form by the invention of Bent's Milk Albumen, which in some respects is superior to fresh skim milk in that the sugar has been removed, and thus is not fermentative and does not cause bowel looseness, although having a very high albumenoid content. Besides it has perfect keeping qualities in all climates, which especially commends it, and is most admirably adapted to the needs and uses of poultrymen as an animal food, and especially in the production of winter eggs. Bent's Milk Albumen has a widespread sale and a bright future. Send for free sample and folder today to the Bent-Croissant Company, 14 Main street, Antwerp, N. Y.

NOTICE TO SHOW SECRETARIES.

Dalley & Douglas, White Plymouth Rock Specialists, Flat Rock, Mich., will be pleased to hear from all of the secretaries of the different poultry associations who are offering special inducements for large display of White Plymouth Rocks, as they have a proposition to make them which will cost them nothing but will materially assist in increasing the number of White Rocks, which they will have on exhibition the coming season. Full particulars of this proposition will be given later in these columns.

A. L. Weckler, Bunker Hill, Ind., the well-known Buff Plymouth Rock breeder, reports that he has the finest lot of young birds that he ever raised and anyone wanting show birds can be accommodated by writing him and mentioning American Poultry Journal.

PURPLE'S W. ROCKS AND W. WYANDOTTES

AT BARGAIN PRICES

I have about 40 hens for sale at \$2.00 each, and 6 cocks at \$3.00 each. They are not culs but good pure white breeders. My winnings at Newark, Philadelphia, Liutz and Carlisle are proof of their quality.

Hillside Poultry Yards - J. L. Purple, Prop., Columbia, Pa.

WHITE P. ROCKS - CHICAGO WINNERS

Cockerels and pullets from my strain at reasonable prices. Have never been defeated in the show room. Satisfaction guaranteed or your money refunded.

CARL H. KRIPPENE - OSHKOSH, WIS.

SHARP, CLEAN, HARD, WHITE

Just the requisites for an ideal grit. Sharp—for grinding horny food and for exciting a natural flow of gastric juice in the gizzard. Clean—not mixed with trash that adds weight and expense. White—easily seen in the litter by chicks and hens. Hard—preserves its grinding edges till absorbed in gizzard. That's what PEARL GRIT is—and more. Its ingredients are just fitted to build up chicks and hens' egg-organs, muscles and circulation—Lime for egg-shell and bones; Silicon—

Going for Some
for feathers; Sulphur for yolk; Iron for blood, etc. But we can't tell you here all about its economy and value. We have done so in "True Grit"—a free booklet that's yours if you'll write for it. It's full of good "points" for poultry-raisers. Write today.

THE OHIO MARBLE COMPANY,
No. Wayne St., Box 209, Piqua, Ohio

Pearl Grit

Read These 2 Letters

When experienced poultrymen like these give their experiences with incubators and brooders it furnishes an object lesson for any one operating such machines, that is certainly very valuable. We want you to note the Meadowbrook letter as regards incubators, and the other letter as regards brooders. In the former, the Prairie State Machines were operated in competition with another make, and the fact that such a careful record was kept from start to finish makes the result absolutely authentic. The point that stands out so strong in this practical test is the very claim we have so strongly put out for the New Prairie State Machines; that is, they produce the largest number of "livable" chicks from a given number of eggs, of any machine on the market. And isn't that what counts? Isn't it the chicks that live that bring you the profit? In the Meadowbrook test all the chicks

Meadowbrook Stock Farm,
Leavittsburg, O., July 15, 1907.
Prairie State Incubator Co.,
Homer City, Pa.
Gentlemen—As we have run the Prairie State Incubator in competition with the ——— company and ———, under exactly the same conditions since the first of the season, we are pleased to submit a report of the results. As we use a card system on the incubators and brooders, it makes results indisputable. Our cards show an average of 90 percent of hen eggs and 80 percent of fertile duck eggs hatched in the Prairie State Machine, while the others show the average of 65 percent to 70 percent. Our brooder cards show a loss of but 10 percent from Prairie State chicks as against 50 percent of those hatched in the others. Our new brooder-house, installed with twenty-five No. 5 Indoor Brooders, has given the best results, and the No. 1 Colony Brooders are simply perfection. We expect to turn out thirty-five to forty thousand broilers a year, and it is needless to say that, after these tests, it will be done with the Prairie State Machines. Yours respectfully,
E. E. CROWDER, Supt.

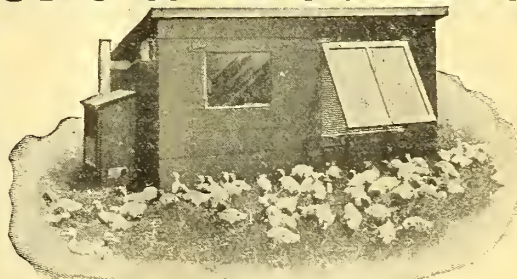

hatched in both machines were toe-marked and reared in a Prairie State Brooder. The vast difference in death loss—10 percent and 50 percent—conclusively proves that chicks hatched in a Prairie State machine have far more vitality, vigor and strength than those hatched in others. This is a mighty important feature—a dollar-and-cents item to you.

PRAIRIE STATE INCUBATORS & BROODERS

Millington, N. J., Jan 16, 1907.
Prairie State Incubator Co.
Gentlemen—I have three of your No. 1 Colony Brooders running, and they certainly are the real thing. They are entirely exposed to the weather, but that doesn't make any difference. They keep the temperature just the same. It came off very cold last night, and I went out at 10:30 P. M. and the temperature stood at 100. There were chicks just hatched, and when I went there this morning, the thermometer had dropped to 10 degrees outside. I thought all was over with the chicks, as the brooder was exposed so, but I was very much surprised to see the temperature standing up all right.
Very truly, R. C. YEOMANS.

are the most efficient machines made. The reason is simply because we have delved deep into the problem of hatching and rearing as it is accomplished by Nature herself, and then built our machines in a way that produces the same condition as near as it is possible to do so. That's the real secret of their success—they are nature-like machines. We have just issued an advance folder which will interest you. Send for a copy and your name will be entered on our mailing list for a copy of our regular catalog, which will be ready to mail very shortly. Why not get the best? It is the cheapest.

Cousins Standard Incubator

Has Chick Saving, Labor Saving
COUSINS AUTOMATIC
EGG-TURNING TRAYS

Even if you are not going to buy your new incubator just now, there could be no better time to get the catalogue that tells all about the Cousins Standard Incubator, how it's made and why it is best. At all the big poultry shows in the season past, the Cousins was the incubator sensation. Experienced, successful poultry raisers say it is the climax of development in incubator manufacture, ranking in a class all by itself. Reports from users confirm this. Uniformly it gives best results.

OUR EXCLUSIVE PATENTED FEATURES

give the Cousins Incubator undeniable superiority—automatic and absolutely even distribution of heat, with one-half the usual amount of fuel; perfect ventilation and moisture system; no cold air draughts; chick drawer, through which the chickens are removed without opening the egg chamber; greatest durability; handsome appearance; and the Cousins Automatic Egg-Turning Tray, which saves work and time, saves the chicks and insures biggest hatches. Write today for our illustrated book. It tells all about the egg-turning tray. Address

Continued from Page 765

the color of pure Buff Orpingtons? I have some chicks from a very reputable fancier and half of them have a sprinkling of black or brown feathers. Would it do to breed from them? G. F. O. Sheridan, Ind.

Answer:—(1) Under certain conditions hopper feeding would be the best, but as a general rule hand feeding will be found more satisfactory. (2) We

have a number of Rhode Island Red pullets and cockerels past four months old, about 50 per cent of which show off colors; some of them are very dark and have black feathers scattered over them, while others are a light buff and have white feathers in their wings. Are any of these likely to molt into desirable colors between this and time for the pullets to begin laying, or should they be sent to market? (2) What is the record number of eggs pro-

Which is the best way to feed beef scraps to poultry, fresh or dried? Should they have it before them all of the time? (2) Do hens need cut bone when they have plenty of gravel? (3) Should they have lime? If so, how should it be fed? (4) What is the proper amount of grain per day. I feed about a handful to each hen twice a day. Is that enough? H. C. W.

Burlington, Wash.

Answer:—(1) Fresh; about 2 ounces three times per week. (2) Yes. (3) Keep crushed oyster shells before them at all times; they will supply the necessary lime. (4) Laying hens that are confined in limited runs should be fed a large handful three times per day.

Editor American Poultry Journal.

Dear Sir: I wish to ask the following questions: (1) How many layers could a poultryman successfully manage on three town lots, each 25x125 feet. (2) What would be an average price to obtain for fresh eggs in making contracts to customers by the year. (3) Would the smell from the brooder house be too great for a fancier to have his office in same? D. R. T.

Chicago, Ill.

Answer:—(1) Not to exceed 200. (2) Thirty cents. (3) Not if the brooder house is kept in a sanitary condition.

Editor American Poultry Journal.

Dear Sir: Please answer the following question: I had a hen that apparently was well and all right; comb red and laid, and when killed and dressed looked all right, but when I cut through the outer skin water spurted out and run about a pint. I called it dropsy.

A. H. S.

Elsie, Mich.

Answer:—This was, no doubt, dropsy and was wholly unfit for table use.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue and oblige: (1) Is fifty pullets too many to keep in a house 20x20, with large run attached? (2) How long are eggs good for hatching after the male bird is out of the pen? F. B.

Collinsville, Ill.

Answer:—(1) Yes. (2) From three days to two weeks.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: (1) What is the best feed for laying hens during the winter months to get the best results for eggs. (2) How often do they have to be fed? (3) Can green ground bone be fed every day. (4) What is the best to use for mash feed and what time of the day is the best time to feed it.

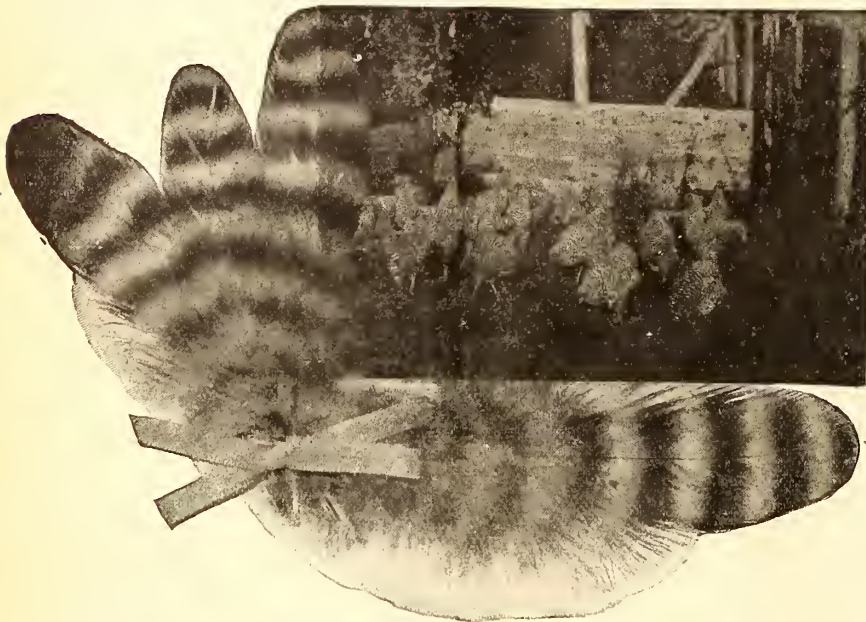

H. K.

Cincinnati, O.

Answer:—(1) Any of the prepared foods now being advertised in these columns will do the work, if other conditions are right. (2) Three times a day. (3) No; three times per week is sufficient. (4) We do not advocate a mash feed for laying hens.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue. Our hens have had a free run on the farm all summer; we feed them on mash in the mornings of corn meal and bran, and oats and cracked corn noon

A group of "Ringlet" Barred Rock Pullets five months old on the poultry farm of E. B. Thompson, Amenia, N. Y.

don't believe it is. (3) Read the ads in this paper. (4) These can be purchased from our advertisers. (5) In the advertising columns of this magazine will be found the advertisements of several good trap-nest manufacturers. (6) Yes. (7) They should be a pure buff color. See American Standard of Perfection.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in the October number of the American Poultry Journal: (1) I

duced in a year by a hen of the Rhode Island Red stock? (3) Will chicks hatched in the fall become as desirable layers as those that are hatched in the spring? Ben F. Carter.

Answer:—(1) Some of these will no doubt molt into desirable color, but the majority will not. (2) We are unable to say. (3) We have never found them so.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1)

CONGO
THE NEVER-LEAK
ROOFING

Congo can't leak, or rust, or rot, or melt in the sun, or freeze in the cold, or dry up, or get brittle, or crack, or rip off in a wind.

Congo can fit snugly on a roof, keep out the rain, the snow, the damp and the cold for many years, with a minimum of care and attention.

Its strongest point is its durability. Send for a free sample.

BUCHANAN-FOSTER CO.,
523 West End Trust Bldg., Philadelphia
Chicago and San Francisco

and night, and the other day one of our best laying hens was taken sick; she acts like chickens do when they have the gapes; keeps opening her mouth all the time and sneezing as if there was something in her throat and the rest of the flock have commenced to sneeze. I have given the hen turpentine and after the hens have gone to roost have taken lime and thrown it all around the pen and over them, but she don't get any better. We have had a lot of them die from this same trouble, only they didn't live so long after taking sick.

R. A. G.

Royalston, Mass.

Answer:—This is no doubt a cold which has been contracted by the fowls roosting in a draught or in damp and poorly ventilated quarters. First look for the cause, then remove it and thoroughly clean and disinfect your hen houses. Disease cannot exist where everything is in a perfectly sanitary condition. Examine the throat of the hen and if canker is discovered you should procure some one of the various canker cures advertised in these columns and give as directed. If it is just an ordinary cold, give lard and kerosene oil. Melt a lump of lard the size of an egg, to which add about a tablespoonful of kerosene oil. Give a teaspoonful of this twice a day for three or four days. Also rub some on head and throat.

Editor American Poultry Journal.

Dear Sir: As a subscriber of your Journal I would like to ask the following questions: (1) Will young chicks inherit feather pulling? They were hatched from eggs of parent birds that pull and eat feathers. If there is any food which will make them stop please let me know the name and where I can get it. (2) Do you think hopper feeding will make them stop? (3) Is there any way in which you can cut the rooster's spurs off? A. W. S.

Chicago, Ill.

Answer:—(1) We do not think this habit is hereditary. (2) No. Keep them busy is about the best remedy. A little powdered alos sprinkled on the feathers is a very good method of stopping this habit. (3) Saw them off, after which round off the edges with a file.

Editor American Poultry Journal.

Dear Sir: Please give in question and answer department the best way, if any, to correct wry tail in pullets.

W. R. F.

Seattle, Wash.

Answer:—There is no way that we know of.

Editor American Poultry Journal.

Dear Sir: Should the fourth and fifth toes on Houdans be well separated or should they have a web between them as the other three toes have? Should fifth toe grow on inside or back of leg.

F. W. G.

Ft. Calhoun, Neb.

Answer:—The fourth and fifth toes should be well separated and the fifth located on back of leg.

MAKE ALL YOU CAN.

While you are making some money at poultry raising, why not make all you can?

If you are making nice money with mixed breeds under ordinary conditions, why not raise the full bloods

White Plymouth Rock hen, "Lady Pleasant," bred and owned by J. A. Bickerdike, Millersville, Ill.

and be in a position to sell fowls and eggs for breeding purposes? No demand, do you say? Well, sir, there is a demand. A nice flock of full bloods commands admiration. They will to a great extent advertise themselves. Give them a little better treatment and

get 150 to 300 eggs per year instead of 75 to 100 from the scrub under very common conditions.

Yes, you can raise the scrub's egg record, but while you are at it expend your energies towards reaching the highest possible profits. The full bloods are not only the most profitable in a direct way, but they make your place or premises look better, gives the owner a prestige that is comfortable and really profitable in the long run.

To ask the owner of a scrub flock why he does not have some particular kind, four times out of five he will say the common chickens are more healthy. I have known these kind of claims to be made right in the midst of the scrubs dying off. Such claims are prejudice, pure and simple. Take the common kind or the full bloods and pen them up in unnatural close quarters and the effect is the same in either instance. Turn them loose on the farm and give them good treatment and both will respond.

While the first trap nests were a craze and the excitement soon abated, there were enough logical poultry fanciers who held on to the trap nests to start and maintain an improvement in egg yield. This improvement is entirely with pure breeds. The trap nest serves a useful purpose. They are to the poultry fanciers what the Babcock test is to the dairyman.

Another reason for the full bloods is the evenness of market fowls and eggs. A coop all the same color is more attractive and will bring a better price, and the same of eggs. To start out with I intended to write about getting the top market price, as a starter in

Large Illustrated Circular and Price List Free

the right direction full blood poultry is the first requisite.

Any poultry raiser that has one or more cases of eggs in a week can get from 20 to 40 per cent more for them by looking up a private market—some hotel, groceryman, eating house or the diners on trains. Put the eggs up in cartons, holding one dozen each. Put them up fresh and clean and stamp them with a rubber stamp. A trade can be worked up with any city groceryman that caters to the high-class trade, or it can be done direct with the concerns mentioned.

I know whereof I speak about these things. I know of a number that are doing it. I know of a single creamery company that handle fifteen cars of eggs per month in pretty much the same way. I know of parties who are making a nice thing out of it and there is plenty room left.

There is nothing that we eat that goes on the market in such a haphazard, filthy condition as the poultry and egg product. Not by any means am I overdrawn. Consider it for yourself. Watch the groceryman or average egg buyer fill a case of eggs for market. No matter how old or besmeared the case, just so long as it will hold the eggs and nail together, it will do. No attention is paid to the smell of the egg fillers, no sorting for color, no attention is paid to the dirt or

feathers sticking to the shells. Most assuredly it will take a hungry person to fill up on the stuff if they saw it first.

The most careless method is followed in marketing fowls. Take a walk in the market place of any city and we get a lesson. Right there we find fowls of all ages, sizes and color in the same coop. I might say without overdrawn that the coops are a mixture of fowls, feathers and corruption. At the average market place it is a relief to find a coop evenly balanced up in size and color. A really decent coop makes us draw a more satisfied breath.

In these days of co-operative creameries, grain elevators and other things helpful to the producer, it is queer that the most important and biggest industry of all is neglected. Every town or poultry raising community would advance the popularity of poultry and eggs as food and make money while doing it. It can be operated as individuals or as a company.

Let me say here, that after a groceryman has handled a few cases of eggs put up as I have suggested, the matter of price becomes secondary to keeping that kind in stock. The cleaner and more attractive appearance gives his store a prestige instead of making an eyesore to tasty customers. There is nothing more handsome than a stock of clean eggs in attractive cartons;

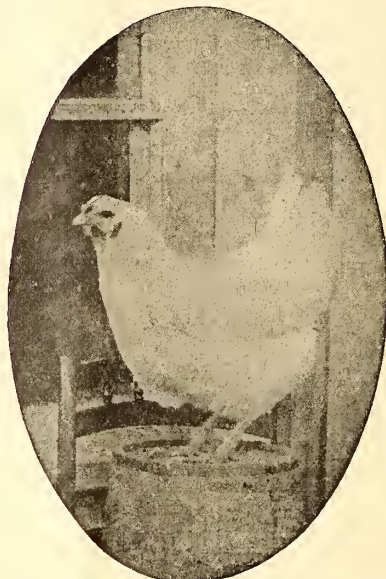

there is a repulsiveness in a filthy stock of eggs.

M. M. Johnson.
Clay Center, Neb.

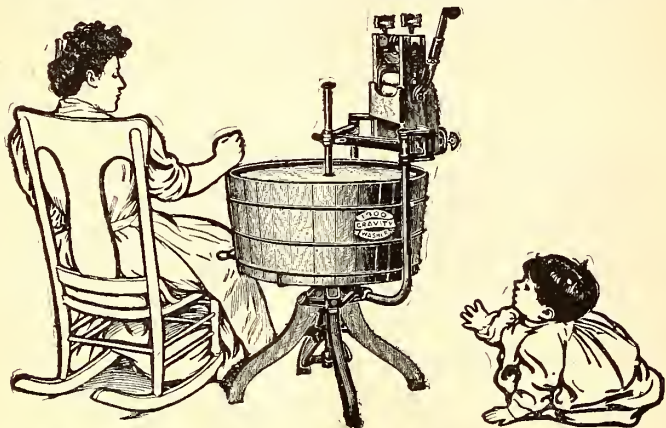

WINTER EGG PRODUCTION.

The subject of this article is of much interest to all who are engaged in poultry raising, and especially to those who have large utility flocks.

Considerable of my time is spent on the road as traveling salesman for a wholesale manufacturing company. During my travels last winter through a number of states, I made inquiries of poultrymen regarding the amount of eggs their fowls were producing, when eggs were selling for 40 to 60 cents per dozen. I found reports varied. Some were getting a good yield, some fair and others scarcely any. The ones getting a good yield were

A White Wyandotte hen with a record of 272 eggs, weighs 8 pounds, is now going on her third year and has never been broody. Owned and bred by R. A. Richardson, Haverhill, Mass.

Easy Washing in 6 Minutes

HERE is a washer that washes a tubful of dirty clothes clean in six minutes. All you do is sit beside the washer and help it with gentle pushes and pulls that take hardly any effort at all.

The little patent links under the tub do most of the real work of the washing.

They keep the tub swinging back and forth and up and down with a "tip-turning"—or "oscillating" motion which sends the hot, soapy water in the tub swirling over, and under, and round the clothes until all the dirt is washed out.

Your clothes are held still—so they can't possibly be injured.

There is nothing to pull and haul your clothes about—nothing to beat nor pound them—nothing to wear nor tear them.

You can wash lace in a 1900 Gravity Washer and never injure a mesh.

And you can wash quilts and rugs and carpets without tiring yourself.

The 1900 Gravity Washer washes so quickly—so easily—and so thoroughly that any ordinary wash will be on the line early wash-day morning.

And you won't be "all beat out" when the washing is finished. For there isn't enough work to tire even a very delicate woman.

You won't be "steam soaked." For the steam is kept in the washer to help wash the clothes clean.

Thus your health is protected. You are kept from exposure.

Of course the savings effected by a 1900 Gravity Washer—savings of time and strength and wear on clothes—are worth a lot to you.

And the 1900 Gravity Washer is the only washer that effects such savings, because these savings are all due to the working parts of the washer, which make it wash quickly and easily, while the clothes are held still.

The working parts of the 1900 Gravity Washer cannot be imitated, because they are patented. I have sold thousands and thousands of my washers during the past few years.

Thousands and thousands of pleased women users can tell you how my washers save.

But I don't ask you to take even the testimony of actual users of my washers.

I say "Prove a 1900 Gravity Washer for yourself and—at my expense."

I will send a washer to any responsible party and prepay the freight.

I will ship you a washer promptly so you can have it at once. You don't have to send me a cent in advance.

All you do is take the washer and use it a month. Do four weeks' washings with it.

And if you don't find the 1900 Gravity Washer all I claim—if it doesn't save exactly as I say—if it doesn't wash quicker, and easier, and better, and more economically than you have ever washed before—don't keep the washer.

Just tell me you don't want it, and that will settle the matter.

The test shan't cost you a penny.

Your month's use of the washer is—FREE.

If you want to keep my washer—if you are pleased and satisfied—if you see where the washer will save time and strength and clothes—and, in that way save money enough to pay for itself in a few months—why, I will let you Pay for the Washer as it Saves for You.

Pay by the week—or the month—please yourself.

This way you really Let the Washer Pay for Itself Out of What It Saves.

Send today for my New Illustrated Washer Book. It is FREE.

Your name and address on a post card mailed at once brings the Book by return mail, postpaid.

Write now. Find out all there is to know about the only washer that saves your time, strength and clothes—protects your health and your pocketbook—and Pays for Itself by Its Saving.

Write to me, address E. F. Bieher, Manager 1900 Washer Co., 784 Henry St., Binghamton, N. Y.

Or—if you live in Canada, write to "The Canadian 1900 Washer Co.," 355 Yonge St., Toronto, Ontario.

the ones who had their birds in extra warm houses and took great pains in caring for their stock. They cooked much of their feed and fed them warm mash twice daily, adding "dope" to force egg production. The ones getting a small yield, I found, had their birds in less comfortable quarters, but took much pains with their feed, by mixing mash and dopes. The ones getting very few eggs generally had large flocks in comfortable quarters, but hadn't the time to fuss with their stock and cook them a meal twice a day and mix up a hot mash doped with powders to force egg production. Almost any breed of fowls will lay when forced in this manner. It is objectionable for two reasons. First, because it is in violation of the laws of nature and thereby weakens the vitality of the fowl. Second, because it takes too much time. You say, what am I going to do? My reply is, get a breed that will produce eggs liberally in cold weather, under unfavorable conditions, without this extra care and work. It is the only way to get good returns, because it is not practical or profitable for the man with the large utility

flock to take such trouble in caring for his birds.

The winter months find me busy on the road, when my chickens require the most attention. My flocks are left under the care of my faithful servant. She is busy with her household duties, but always finds time to throw them grain three times a day. I feed dry grain three times a day and seven days in the week. The morning and noon feeds consist of mixed grain in litter and wheat at night—occasionally corn during the cold weather. I keep before them constantly in a hopper, grit, oyster shell, charcoal, bran and beef scrap.

A poultry judge with a wide experience called on me in December. He saw the large number of eggs in the nests. He advised me to stop them laying, as he thought they would be apt to "lay out" by hatching season. They had started in the fall, laid heavy through the winter and spring, and still continue their good work. I am getting these splendid results without dope or mashes. If you have the right breed you can do the same. After having several breeds I have discarded all excepting my handsome Anconas. They have earned the proud distinction of being the greatest layers in poultrydom. They mature early. Lay when about five months old—sometimes at four and one-half. They lay almost the year around, only stopping a short period during molting season. They lay a large white egg. Eggs as they run from my imported stock weigh two to two and one-fourth pounds to the dozen.

SILVER LACED WYANDOTTE CLUB.

The Silver Laced Wyandotte Club will offer four elegant, artistic blue ribbons for best cock, cockerel, hen and pullet at forty of the leading shows of the country. These ribbons will be superior to any ribbons heretofore offered by any other club and it is hoped that this will tend to bring out a strong showing of Silver Laced Wyandottes—the original Wyandottes—the most beautiful of all the Wyandotte family.

The only string to these beautiful ribbons is that every winning bird must score ninety points or better and the officiating judge must be a member of the American Poultry Association.

Secretaries of poultry shows should put themselves into communication with the undersigned and every lover of Silver Laced Wyandottes should send his name at once and obtain particulars as to our club.

GOLDEN WEST DUCK RANCHE - JOLIET, ILLINOIS

"White Frost" Strain White Wyandottes

New Jersey's Leading Strain. Our winnings of last year place us in about the front rank: the 41 prizes which our birds captured should cause their offspring of this season to be looked upon with favor. Whites. We have over 700 chicks. They show great quality, and all who are interested in these birds should come and look them over. Our sale of breeders, including a number of last year's prize winners, is now on, and we can furnish pens, tris, single specimens or birds in large quantities that will give satisfaction. Those who come first will have the first choice. Visitors are welcome whether they desire to purchase or not; we are anxious to show our plant. **Columbians.** We would also be glad to show our Columbian Wyandotte chicks. **Buff Cochins Bantams.** We have been particularly successful with these birds this season, and have some nice chicks and breeders for sale. We fully expect to add to our list of ribbons in this variety during the coming show season.

CHARLES D. CLEVELAND, Sunny Brook Farm, West Orange, N. J. Member National White Wyandotte Club, American W. Wyandotte Club, Nat'l. Columbian Wyandotte Club.

Hedges' W. P. Rocks

WINNERS AND LAYERS

A choice lot of young stock for exhibition or utility. Pedigree bred by the trap nest system. Still have some of this year's breeders that are high scoring birds. Satisfaction guaranteed. Catalogue free.

MISS ALICE M. HEDGES Box A, Pana, Ill.

Don't Blame the Hen

for being a poor layer unless you know it's her fault. Often the food is wrong. Grains contain only a part of the egg-making materials.

Rust's Egg Producer

contains the rest and in the right proportions so that every particle is used. One user writes: "Its use especially doubled egg production." Its results are unequalled. Prices 14c to 25c per lb. according to size of package. Ask your dealer. **Rust's Egg Record** and useful booklet on poultry keeping free. Write.

WILLIAM RUST & SONS, Dept. P, New Brunswick, N. J.

STEINMESCH'S EARLY BREAKFAST Mash

"Something New" Try it and if you like it Buy it. Sample Free

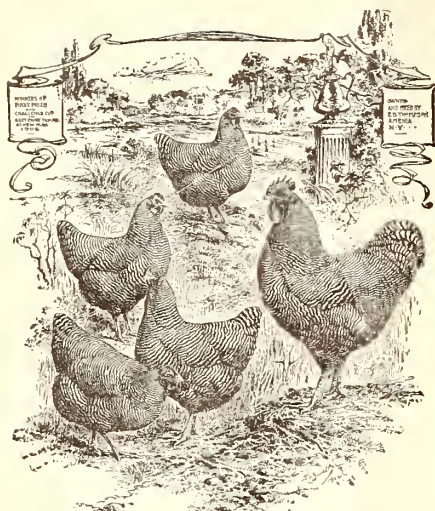

Every authority on poultry recommends a morning mash for poultry, especially during the fall and winter months. Our Mash is made up of the very choicest Winter Wheat Bran, and Middlings, Crushed Oats, Linseed Meal, Bone and Beef Meal, Clover Meal, Charcoal, etc. Nothing better for growing and adult fowls; will push the young stock to quick maturity, will help adults through the moult, insuring health and vigor for both. The greatest egg producer ever offered.

A Forcing Feed, A Fattening Feed, A Conditioning Feed

All in one—simply regulate the quantity fed. Price, \$2.00 for 100 lbs. \$1.25 for 50 lbs. We pay freight on 200 lbs. and over to all parts of the U. S.

STEINMESCH FEED & POULTRY SUPPLY COMPANY, 301 Market St., St. Louis, Mo. A Great Big Sack Full 100 FEEDS FOR 10 HENS. Wholesale and Retail.

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 48 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

NOVEMBER 1907

NO. 11

AMERICAN POULTRY JOURNAL

At The New York State Fair

Syracuse, Sept. 9 to 14, 1907, we again established the fact that we have the stock that can win anywhere. In Barred P. Rocks we won 1st cock bird, 1st pullet, 3d cockerel, 2d young pen and 2d old pen. In the S. C. White Leghorn class we won 2d cockerel, 3d pullet, 2d young pen, 3d old pen and 5th cock bird. We still have some of our breeders left from which this stock was bred, and are for sale at very low prices, in order to make room for our young stock, which is the finest we have ever raised. Send for particulars.

HUDSON, MASS

A fine lot of exhibition birds for sale; pullets, cockerels and yearling hens. Remember, my stock wins the blue ribbons wherever shown. If you want to win at the fall and winter shows place your order with

W. L. FERN

ELGIN, ILLS

S. C. W. Leghorns

The Best Trap Nest Made

is the ACME, because it does not frighten the hens that use it. Remember that the hens do not have to be COAXED or TRAINED to use the Acme, because all that is required of the hen is to walk into the Acme like she would to use any box or barrel nest. It is simple in construction, easy to operate, safe, roomy and comfortable. It is well ventilated and darkened. It never fails to trap the hen, and the weight of the hen when she enters nest throws the trap. No wires to push against, no tilt board, no springs, no pulleys, no weights to get out of order. Your money back if not as represented. Cat. free.

ACME TRAP NEST CO. - BEDFORD, INDIANA

600 "Ringlet" Barred Plymouth Rocks

In their purity, consisting of beautiful exhibition ckls. and yearling cock birds, pullets, hens and fine pullet bred ckls. Also hundreds of good breeders from \$1.50 to \$3 each. At the Wis. State Show, Jan., 1906, our birds made nearly a clean sweep, a record positively never approached by any other breeder East or West. We will sell you as good a bird for \$10 as others sell for \$20; our \$15 and \$20 birds cannot be duplicated for less than \$30 to \$40 elsewhere, and our \$25 birds would positively cost you from \$50 to \$75 in the East. Send us your order direct from this ad, stating your wants plainly, and you'll find there is at least ONE poultry firm that HAS AND DOES WHAT THEY ADVERTISE. We positively GUARANTEE EVERY SALE to please or refund your money as cheerfully as we take it. Sincerely yours,

AT IT TEN YEARS

GOLD IN THE GRIT BAG

Here is what the miner would call "pay dirt" for it will put mon-
ey in the poultryman's pocket. It's nature's own product made
from the natural rock and ground to the proper sizes for feeding
all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's
system and assist the digestive and egg-making organs in the
production of eggs and vigorous growth. Turkeys, ducks, chick-
ens, geese, little chicks and pigeons thrive on it. Its a most eco-
nomical and profitable grit; just what you are looking for, 50 and
100 lb. bags. Car load lots if desired. Send for free sample. Agents
wanted.

MY SOUVENIR BOOKLET ON REQUEST

ADDRESS:

S. D. LAPHAM, Dearborn, Mich.

LOCK BOX 6789.

MENTION THIS JOURNAL.

You are ALL CONFUSED about Pianos!

—You want the sweetest toned

—You want that sweet tone to last

—You dislike to spend any more

money than necessary:—But every adviser, and so-called expert, recommends a different make. You are like a man lost in the woods. You don't know which way to turn. This surely describes your position.

THE REMEDY:—Educate yourself on the subject! Study—read—Read more—Study more. Then listen in the quietness of your own parlor to the tone of the highest grade piano you can get, but without agreeing to purchase it. Call

in all those musical friends who you *know* are not under past obligations to any piano dealers or friends of dealers. Resolve you will study attentively piano tone and will be deaf, while studying, to the magnetic talk and persuasiveness of salesmen. This is the *intelligent* way. It's the way you planned your new home. You made a long study of it calmly, thoroughly, and you became quite an expert. You can be just as expert about pianos.

We are willing to send you free two books:

One officially entitled "The Book of Complete Information about Pianos." **YOU NEED THIS BOOK** of 156 Pages handsomely bound, if you *ever* intend to buy a piano, no matter what make.

It tells how to test a piano and how to tell good from bad; what causes pianos to get out of order. It makes the selection of a piano easy. If read carefully it will make you an expert judge of piano-tone, of action, workmanship and of durability.

It tells everything that any one can possibly want to know about pianos; gives a description of every part of the piano, how put together and all the processes of manufacture. Gives description of the new invention for aiding learners to play called **THE NOTEACCORD** (endorsed by Paderewski and other great pianists). It explains Agents and Dealers' Methods and Devices.

It tells about the very first piano; the qualities of labor, the felt,

ivories and woods used in every high-grade piano and compares high qualities with the cheaper kind (used in inferior pianos). Describes what constitutes a musical-piano-tone, and in fact is a complete *encyclopedia*.

You need and should have **THIS EDUCATIONAL BOOK** to thoroughly inform you whenever **CONFUSED ABOUT PIANOS**.

Its scores of illustrations (all devoted to piano construction) are not only interesting but are *instructive*; to children as well as to adults.

You will certainly learn a great deal about pianos that you could not hear of or read **ANYWHERE ELSE**, for it is absolutely the *only* book of its kind *ever* published. Nevertheless we send it free.

The other book is also copyrighted but is a short story named **"JOHN HONEY-WELL'S REA-**

SONS." The story of an average American family which was **ALL CONFUSED** about Pianos—it is interesting, readable and prettily illustrated—gives a little hint of a love affair which the piano helped along, as many pianos have done.

These two books cost quite a sum to produce, print, bind, illustrate and mail. Upwards of 400,000 have been issued and without a single exception have been highly commended.

SO FAR not one word about ourselves. We are and have been the manufacturers of **THE FAMOUS WING PIANO** for the past 39 years!

ALSO 23 PLAINER STYLES

We have supplied over 40,000 American Homes with WING PIANOS.

We refer to Banks, Governors of many States and Judges; to Merchants, Conservatories of Music, Singers and Professors of Music. We have been students of vibration and of musical tone and strength of materials during all these 39 years. The first patent issued to our Mr. Wing Senior, for improvement on pianos was in 1876 and other improvements have been invented since at the average rate of more than one yearly. These facts prove our skill and long experience, but would not be mentioned if we did not wish to show you that we know the piano subject as few others have had the opportunity; for 39 years is a long—long time for a business house to "live and learn" and constantly prosper.

Write for the books at once or fill in the coupon. Take it out and mail to us now while you think of it (and while you have the coupon). You will be under no obligations whatever.

WING BUILDING

359-380 West 13th St., New York.

WING & SON.

LET ME SHOW YOU

How Easy it is to Build Your Own Incubators and Brooders **FREE PLANS** with my

Let me send you these plans and Catalog so you can readily see how easy and simple they are. I furnish all parts, such as Lamp, Regulator, Tank, Legs, Doors, Hardware, Etc., not possible for you to make. No Special Tools nor Mechanical Ability Required.

THOUSANDS ARE DOING IT.

Every stage of construction is carefully described and illustrated by over 100 half-tones, showing step by step the complete building of the FAMOUS PEERLESS INCUBATORS AND BROODERS, making it possible for any one (a boy 10 years old) to build a high-grade Incubator and Brooder with exclusive features and advantages not

found on any other machines on the market. Thousands of Testimonials on file, not a single failure. All I ask is to place in your hands, Free of cost to you, a copy of my Plans and Catalog, containing description of my complete line of Improved Incubator and Brooder Supplies and Fixtures, including my new

Acme Automatic Lamp and Compound Regulator

With Combined Damper and Flame Regulation

They can be easily attached to any make of Incubator or Brooder, and will more than save their cost the first season. They save half the Oil, Time and Labor, and all the annoyances so common with ordinary Lamps and Regulators.

Lamp holds over a gallon; can't be upset; no danger of fire. Combined Damper and Flame Regulation shuts off oil-consumption when heat is not needed.

Automatic Valve keeps oil always same depth on wick, insuring uniform flame—steady heat. Wicks don't burn nor char—saves trimming.

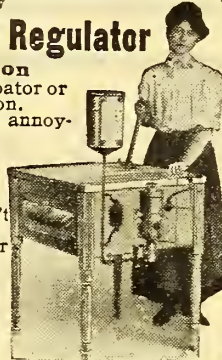

Burners are air-cooled, can't overheat, explode, nor cause fire. No smoke, no soot, no odor; can be operated in any part of the house.

Acme Compound Wafer Regulators are positive in action, accurate to a fraction of a degree.

I manufacture special Tanks, Lamps and Regulators to fit any machine, making it possible to rebuild your old Incubators or Brooders.

Drop me a postal, and I will forward you, at my expense, my complete Book of Plans and Catalog, worth dollars to you. Write today, and be sure to address,

H. M. SHEER COMPANY, 202 Hampshire St., Quincy, Ill.
The Largest Manufacturers of Incubator and Brooder Supplies in the World.

Miller Pays
the Freight

Lowest Prices Ever Made on Guaranteed Incubators

MY Ninety-Day Trial and Guaranty is also the strongest ever made on an Incubator. I guarantee it to be of the best material—to be of the best workmanship—to hatch as large a per cent of fertile eggs, and as strong chicks as any other incubator made, no matter what the price. And I fully protect you with my exclusive 90-Day provision. If after 90 days you do not find it exactly as represented, if it proves defective in any way I will remedy the defect or replace the machine with a new one. I stand back of my incubators until they make good. You have a claim on me until you are perfectly satisfied.

Built by
the Man
who
knows

IDEAL Hot-Air and Hot-Water Incubators & Brooders

are made by the man who knows. That's why I can sell them at such low prices. I learned how to make incubators as a practical poultryman with a quarter of a century's experience on my famous Milhook Poultry Farm.

My 128-page free book, "Poultry for Profit," tells all about Ideal Incubators and Brooders, and gives you a lot of general information worth money to you. It is fully illustrated with halftones from actual photographs. Whether you are a beginner or an experienced chicken raiser, it will help you. Just cut out and fill in this coupon with your name and address now before you forget it—send it to me and see how quick this big handsome book will come back to you. Address

Barrington, Illinois

Ring's White Rocks

have established unequalled records at Chicago, Detroit and many other shows, besides producing Hendryx, the noted \$500 cockerel whose score of 96 1/4 is the highest ever given to a White Rock cockerel in competition. Hundreds of early hatched, well matured youngsters, many sired by Hendryx and his sire, that will take the ribbons this fall and winter. Write early for free catalogue and prices on exhibition and breeding stock.

CHAS. H. RING :: **R. F. D., DECATUR, MICH.**

**CYPHERS INCUBATORS
AND BROODERS****SECURE THEIR REPUTATION
FROM THE SUCCESS OF
POULTRYMEN KNOWN TO YOU**

IT WOULD BE STRANGE if you did not know at least one of the many successful poultrymen who write us that much of their success is attributed to the use of Cyphers Incubators and Brooders. You can readily decide this question by writing for our Great Free Catalogue in which we publish a large number of the letters we receive, in many cases with photographs of the writers, their poultry yards, duck farms, brooding houses, etc., etc., and in all cases their names and addresses. This is an opportunity to discover

WHO'S WHO IN THE POULTRY WORLD

Our Catalogue contains photographs of the proprietors of the World's Biggest Duck Farms, America's Leading Egg Farms, Experimental Station Experts and the Most Successful Winners at our Big Shows—New York, Boston, Chicago, etc.

It will be a pleasure to send you this Catalogue—postpaid by us. It is fully illustrated with the many different styles and sizes of machines we manufacture. By getting it now you are enabled to take your time deciding just what machine best meets your requirements, and will secure the advantage of hatching your chicks or ducks early. It's money in your pocket.

The following are the goods we manufacture and Sell Direct to Customers at First Cost, also through thousands of agents and at Six Branch Houses. Ask for Cyphers Incubator Company's Goods and take no others, thereby securing the benefit of our Guarantee.

BOGARDUS' ORPINGTONS

S. C. BUFF AND BLACK. Have proven their quality by winning at such shows as Chicago, Indianapolis, Cincinnati and Hagerstown. The finest lot of early hatched young stock I ever raised. Ckls. and pullets good enough to win in any company. Also a few high-class exhibition cocks and hens. Fifty yearling breeding hens cheap. Write me your wants. Don't miss winning the coveted blue, when a few dollars spent with me will do the trick. Prompt attention and a square deal.

O. A. BOGARDUS - Box 31, WARSAW, KY.

W. WYANDOTTES

MAPLESIDE STRAIN. Madison Square Garden and Boston winners, 1906-7. I have the grandest lot of stock, both in show birds and breeders that I have ever bred. I can please you both in quality and price or money refunded. Hundreds of yearlings at bargain prices. Write for my illustrated booklet and state just what you want.

CHAS. NIXON :: Box 202, WASHINGTON, N. J.

WHITE WYANDOTTES

At Madison Square Garden, 1905, 1906, 1907, and Boston, 1906 and 1907, birds I bred and raised won nine 1sts, three 2ds, two 3ds, four 4ths, one 5th and one 6th. A record equaled by no other breeder.

John L. Dakin - - Roxbury, Mass.

FEED, TEN CENTS A BUSHEL

Is your main food for producing eggs and growing young stock costing you more than 10 to 15 cents a bushel? If so, you want my new book, title Profits in Poultry Keeping Solved, which tells you how to make this great feed and gives you every detail in laying out and running a poultry plant. Gives you my life time experience. You can save \$25 a year on every 100 hens you feed as well as increase your egg yield 80 to 40 per cent. No mashes under my new system. I have put hundreds of plants on a paying basis and can yours. Write today and stop that big feed bill. Circulars and testimonials free. My second edition of 3000 copies now ready.

EDGAR BRIGGS - Box A, NEW ROCHELLE, N. Y.

A FULL EGG BASKET IN WINTER

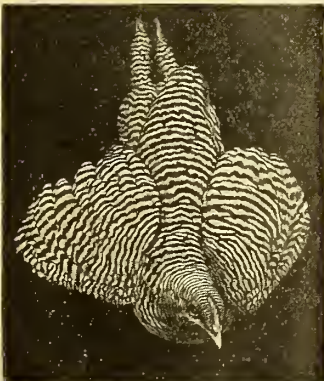

That is what rejoices the heart of the poultryman for that is when eggs are eggs and bring fancy prices. The way to fill the basket is to exercise care in feeding. A winter ration that supplies the same food properties which the hens get in warm weather when they find plenty of grubs and green food will give you eggs in winter. A mash made of

Harvey's Electric Poultry Food and Cut Alfalfa Hay

gives the hens just what they need for egg production. They will get busy if fed in this way. Sample free. To growing fowls feed Harvey's Ground Beef Scraps and Harvey's Mixed Grains. Write today for big free catalog of immense line of poultry supplies. We can save you money.

HARVEY SEED CO., 704 Ellicott Street, Buffalo, N. Y.

1000 "RINGY" CHICKS

Snappy colored—deeply, darkly, beautifully blue—and ringy all over. Intensely line-bred from a long line of rich, marvelous Ancestors.

THESE ARE ARISTOCRATS

They are superb.—Strong, vigorous, hardy, deep-bodied, full-breasted and magnificent in plumage. Do you want winners? Write me in time. Birds of extraordinary, exquisite, beautiful color are among my young chicks this season. Grand catalog free. Some of my last season's breeders for sale. Write today.

W. D. HOLTERMAN, Fancier, Box A, Fort Wayne, Ind.

The Thompson Strain

of White Rocks and Bronze Turkeys is well known as one of the leading strains. 1000 choice birds for sale at prices that are right. Eggs by the setting or thousand.

801 Wainwright Bldg., St. Louis, Mo.

POULTRY IN THE SOUTH

ON THE LINE OF THE ILLINOIS CENTRAL

The Manufacturer's Record, of Baltimore, Md., is authority for the statement that the poultry products of the South for 1906 reached the enormous sum of \$159,000,000. Of nine leading southern products, with one exception, the poultry crop exceeded them all by several million dollars. The adaptability of the south for the successful raising of poultry for northern winter markets has now been demonstrated, and along the line of the Illinois Central, especially at Hammond, La., flourishing farms are thriving with pleasing results. In Tennessee, Mississippi and Louisiana on the Illinois Central and Yazoo & Mississippi Railroads are natural conditions for poultry raising. The splendid shipping facilities of these roads for reaching important markets, both north and south, should also be considered. For further information, together with illustrated circulars quoting statements from prominent poultry dealers of the south, address the undersigned at Manchester, Iowa.

J. F. MERRY, General Immigration Agent,
Room 13, Hive Block.

Silver Laced Wyandottes

exclusively. Young stock for sale from our Kansas City, Scranton, Nashville, Indianapolis and Chicago winners. We have the finest lot of chicks ever raised, and can furnish you stock fit to win in any show. Also a fine lot of cocks and hens. Circular. Write your wants.

North Side Poultry Yards, A. & E. Tarbox, Box A-5, Yorkville, Ill.

Consider Yourself!

You want to win at a certain show—you are ready to make an effort. Spending time and money.

Consider W. Wyandottes!

If you want to get into a class where there's competition and where you can luxuriate in quality, as this class has for years proved the most attractive of the show room.

Consider Duston!

Now if you are to show why not be a bit discriminating and buy from the one who can do you GOOD and furnish winners?

Consider Madison Square!

My birds won out at Madison Square last winter, beating out the best this country and Canada could furnish (no limit to money.) Just look up these winnings, and remember this show is no Fall Fair, and that this is the kind of goods that it has taken to "make possible the world's best flocks" and that Duston has for thirteen years furnished winners to great and small, yet publishes no customer's winnings.

Arthur G. Duston :: Box 1020, S. Framingham, Mass.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

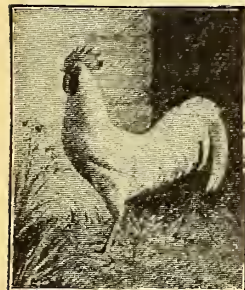

THOS. F. RIGG, IOWA FALLS, IOWA

BLACK LANGSHANS THE KIND THAT WIN

Have recently purchased the entire stock of Wm. Turnbull, the noted Black Langshan breeder, and I now have 600 choice birds to offer at prices that will suit. Write at once if you want birds that will win or produce winners for you. Mention American Poultry Journal.

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cups. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N. Y.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

Ridgewood, N. J.

Read These 2 Letters

When experienced poultrymen like these give their experiences with incubators and brooders it furnishes an object lesson for any one operating such machines, that is certainly very valuable. We want you to note the Meadowbrook letter as regards incubators, and the other letter as regards brooders. In the former, the Prairie State Machines were operated in competition with another make, and the fact that such a careful record was kept from start to finish makes the result absolutely authentic. The point that stands out so strong in this practical test is the very claim we have so strongly put out for the New Prairie State Machines; that is, they produce the largest number of "livable" chicks from a given number of eggs, of any machine on the market. And isn't that what counts? Isn't it the chicks that live that bring you the profit? In the Meadowbrook test all the chicks

Meadowbrook Stock Farm,
Leavittsburg, O., July 15, 1907.
Prairie State Incubator Co.,
Homer City, Pa.

Gentlemen:—As we have run the Prairie State Incubator in competition with the — — company and — —, under exactly the same conditions since the first of the season, we are pleased to submit a report of the results. As we use a card system on the incubators and brooders, it makes results indisputable. Our cards show an average of 90 percent of hen eggs and 80 percent of fertile duck eggs hatched in the Prairie State Machine, while the others show the average of 65 percent to 70 percent. Our brooder cards show a loss of but 10 percent from Prairie State chicks as against 50 percent of those hatched in the others. Our new brooder-house, installed with twenty-five No. 5 Indoor Brooders, has given the best results, and the No. 1 Colony Brooders are simply perfection. We expect to turn out thirty-five to forty thousand broilers a year, and it is needless to say that, after these tests, it will be done with the Prairie State Machines. Yours respectfully,
J. E. CROWDER, Supt.

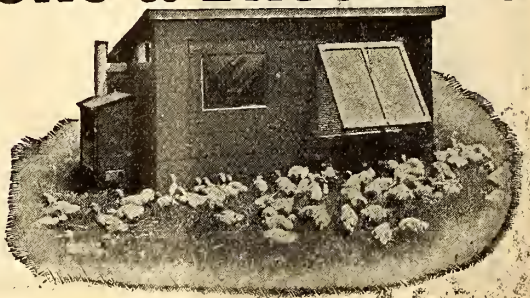

PRAIRIE STATE INCUBATORS & BROODERS

Millington, N. J., Jan 16, 1907.
Prairie State Incubator Co.

Gentlemen:—I have three of your No. 1 Colony Brooders running, and they certainly are the real thing. They are entirely exposed to the weather, but that doesn't make any difference. They keep the temperature just the same. It came off very cold last night, and I went out at 10:30 P. M. and the temperature stood at 10°. There were chicks just hatched, and when I went there this morning, the thermometer had dropped to 16 degrees outside. I thought all was over with the chicks, as the brooder was exposed so, but I was very much surprised to see the temperature standing up all right. Very truly, R. C. YEOMANS.

are the most efficient machines made. The reason is simply because we have delved deep into the problem of hatching and rearing as it is accomplished by Nature herself, and then built our machines in a way that produces the same condition as near as it is possible to do so. That's the real secret of their success—they are nature-like machines. We have just issued an advance folder which will interest you. Send for a copy and your name will be entered on our mailing list for a copy of our regular catalog, which will be ready to mail very shortly. Why not get the best? It is the cheapest.

Free Sample and book.—If you'll say so, we'll gladly send our 32-page book, "Making Poultry Pay," and a sample of Indian-Brand Charcoal. Thomas Brothers Co. Box 1227 Philadelphia, Pa.

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used for ceiling and siding. It comes to you straight from our own factory.

Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated as shown in illustration, sheets 22x24 inches, \$1.65. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the

interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

We will supply you with a fine ceiling, as tradition, all put up at 100 square feet, 24 wide and 6 long. They are excellent. Nothing up" as old more than some brick makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building. We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices to these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron

OUR SILVER JUBILEE

This year marks the Silver Jubilee of the "Reliable" Incubator. For twenty-five years they have stood the severest tests under all conditions, and have demonstrated that Reliable machines are thoroughly practical and satisfactory in every respect. Today, the demand for Reliabilities is greater than ever. They are scientifically constructed along the most practical lines. They employ those principles of hatching which have been proven to be correct. The double heating system, perfect ventilation, even temperature and the absence of draughts produce the highest possible number of chicks from any given quantity of fertile eggs. The Reliable Incubator is cheaper to operate, requiring one-third less oil than any other. We guarantee it to do as we claim or money refunded. Silver Jubilee Catalog free. Get our prices on pure bred poultry and eggs.

RELIABLE INCUBATOR & BROODER COMPANY, Box A-1, QUINCY, ILL.

DANDY GREEN BONE CUTTERS

If you have no bone cutter, or if the one you have isn't satisfactory let us send you a "Dandy" Green Bone Cutter on 15 days free trial—without a cent in advance.

We believe that every poultry-raiser with ten hens or more should have a good bone cutter. We make the "Dandy" in sizes to suit all needs.

Cut Green Bone will make every hen more productive; it makes chicks grow faster; it keeps fowls healthy and in the pink of condition.

No addition you can make to your poultry business will earn you so much money as a "Dandy" Green Bone Cutter.

A great many poultry - raisers have never fed fresh cut green bone. They have read about it and think it may be so, but they don't know. A great many more have tried stuff sold

as cut green bone, but results didn't satisfy them and they are doubters. But no man or woman ever fed fresh cut green bone who was not enthusiastic over it. Why? Because fresh cut green bone is a natural food for fowls; it supplies what their appetites crave—the fat bug and the juicy worm. Penned-up poultry cannot get bugs and worms in sufficient quantities to satisfy them, consequently you must supply a substitute. Cut green bone is the only substitute known—it is the bug and worm in a different form, and is the best and cheapest chicken feed in the world. It costs you practically nothing—it is made from scraps that would be thrown away, but which the "Dandy" quickly turns into money for you.

Write today for free catalog, select the size you want and send us your order to ship it at once on 15 days free trial.

SLEEPY EYE POULTRY AND CHICK FOODS

Successful poultry-raisers are particular about the feeds they use. They have learned that profit or loss depend more upon feed than upon breed. Hundreds of the most successful ones have adopted Sleepy Eye Foods because they bring the profit. They are scientifically prepared, by an exact and never varying formula, from the choicest grains, seeds, etc., to meet the needs of poultry-raisers everywhere. They are properly proportioned and balanced, and are fed dry without loss or waste. The Poultry Food helps hens lay lots of eggs, prepares pullets for early layers, puts market birds in shape to bring top-notch prices, and keeps the whole flock healthy and prosperous. The Chick Food starts little chicks in life with vigorous constitutions and keeps them growing. If you want more profit, feed "Sleepy Eye." Write today for circular and free samples of foods. We'll tell you where to buy "Sleepy Eye."

Dr. N. E. Mighell - "Oak Bluff," Marshalltown, Iowa

MODEL

Incubators and Brooders

YOU WANT THE MODEL

A hatcher that does not require night watching;
A hatcher in which the heat is perfectly, automatically regulated.
Contains the most perfect heat controller in existence.
Strong, yet active; sensitive, yet positive—perfect in action.

The Patent-Office has decided in my favor in the interference suit on this perfect-acting regulator,
THE MODEL CORRUGATED LEAF, COMPOUND THERMOSTAT.

This thermostat has three corrugations in each leaf; is exceedingly strong and rigid; is not easily damaged; and is so positive in action that the entire movement given off by the different coefficient of expansion between the two metals of which it is made is transmitted to the controlling device without any loss of movement.

The Model Incubator gives a perfect heat control, which stimulates and holds the germ development uniformly constant and normal, as under a hen. This wonderful hatcher has almost a perfect balance in ventilation and humidity, and supplies all the vitalizing principles found under the incubating hen. The Model Incubators and Brooders are used on the biggest money-making commercial poultry plants in this or any other country. The Model Double Indoor Brooder is just what you want for winter work. Broiler men pronounce it the most successful rearer yet produced. At the Model Farm, where we raised over 80,000 birds the past season, the Model Double Indoor Brooder did the best winter work. Buy your incubators and brooders of the man who knows how to hatch and raise poultry, who is doing it successfully on a commercial basis, and who can help you to be successful. Your success is my success. Write for my printed matter.

CHAS. A. CYPHERS, President, Model Incubator Co., 301 Henry St., Buffalo, N. Y.

ARE YOU GUILTY?

POTTER POULTRY HOUSE FIXTURES

solve question No. 1 and provide the most complete, convenient and sanitary equipment for the hen-house: save time and labor and cost but a little. Over 20,000 in use. Our large 64-page catalog (50 illustrations) shows three styles, twelve different sizes; also V. E. roosts, W. P. attachment and trap nests. Write at once for our large catalog.

THE POTTER SYSTEM

of selecting laying and non-laying hens answers No. 2. It is the greatest discovery of the century in the poultry world, and if you do not know the secret you are losing dollars every day you delay in writing us. Over 15,000 now use and recommend it. So will you when you learn it. You can pick the layers from the loafers and keep only the layers: keep fewer hens, get more eggs at a less cost. You can't afford to be without our system. Write for free circ.

THE POTTER PERFECTION FEED HOPPER

and our method of scientific and systematic feeding solves No. 3. Hopper is made in 3 sizes with movable partitions for one or five food compartments. The most sensible, satisfactory and serviceable hopper ever made. Hens are healthier and it saves feed. Our method of feeding tells you how to feed from chicks to laying hens, and how to make the cheapest and best egg-making food known, costing 12 cents a bushel.

If you do not know about our Fixtures and the Potter System you are losing money every day you wait, for we can show you how to keep chickens more profitably and successfully if you will send for our large catalog and free circulars. See our large half-page ad in October papers.

THE MATING OF THE BREEDS.

Some of the Reasons Why the Partridge Cochins Type Is So
Unfixed and the Desirable Shape and Form So Seldom
Found in Specimens in the Show Room and
Breeding Yard—A Study in Color Blending
Which Reveals the Cause of the In-
ferior Coloring of Many Strains
of this Magnificent
Show Breed.

Paper No. 9—The Partridge Cochins.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

Wherever we go we find an individual type of the Partridge Cochins. For years Buff Cochins breeders have been producing fowls of the desirable Cochins shape and form. It seems to be a fixed characteristic with the Buffs. How different it is with the breeders of Partridge Cochins. Rarely do we find a Partridge that is of that beautiful type of Cochins which is so much desired. The Brahma type is in evidence and very conspicuous in nearly all the shows. This is the most serious fault with the Partridge Cochins of today. That this will be overcome goes without saying.

The color markings of a Standard Partridge Cochins, especially the female, are beautiful. Yet how seldom we find a specimen well colored. For some time there has raged a conflict between certain breeders of this fowl as to how best to mate to produce the desirable color markings of the breed. These advocates are far apart. Some one is wrong. There must be a getting together of the fanciers most interested in this grand old breed, and a system of breeding for color established. If this is not done the Partridge Cochins will disappear from the show room.

Mr. W. H. Harrison, Jr., for years a breeder and exhibitor of some of the best Partridge Cochins produced and shown in America, tells in the following how he mates the breed to produce this class of stock. He says:

A man of very wide experience and probably as keen an observer as there is in the poultry world, recently made this remark: "If one hundred men were each given a good flock of Partridge Cochins within five years ninety-nine of them would have their flocks ruined."

A writer in a recent issue of the American Fancier, mourns because many are already dropping Partridge Wyandottes, on account of the difficulty of breeding choice specimens.

About eighteen months ago the publisher of this journal asked the writer if there was anything he knew about breeding Partridge Cochins that he would not be willing to tell the readers of the American Poultry Journal. Being answered in the negative, and assured that the love of the variety far exceeded any selfish interest as a breeder, Mr. Bates requested an article for the January number, 1904. His last injunction was: "Put in as many things as you can that have never before appeared in print—secrets of the trade."

Soon after the appearance of the article the writer received a number of letters from old breeders of Partridge Cochins, agreeing with the points made, some even hinting that some of the statements in the article it was just as well not to make public.

Within sixty days after the article was printed a new breeder of Partridge Cochins, who has gained considerable notoriety

during the last three years on account of prizes won at some of the leading western shows, had articles in two journals, telling how to mate Partridge Cochins. He said he produces exhibition pullets and cockerels from a single mating, using males with dark undercolor.

Another man has published two articles this spring on Partridge Cochins. He is an "old timer" and should know better but here is a quotation from his article in American Fancier of March 11: "The present demand for Partridge Cochins makes the use of double mating unavoidable if we hope to produce the best. We must have a line for males and one for females, and never crossmate or intermingle the blood lines for the males; do not pay any attention to the color of the females along exhibition lines. Work for the color of the male, and mate the females of this line to the best colored males all the time, and keep the largest and best of these females for producing exhibition males. By so doing you will build up a color line for producing males that will give better color results each year. We have seen this continued until every feather on the back had a black center, the same as the saddle feathers, and some of the females from such matings had almost black breasts and a hackle almost like the male in color."

Now, I do not refer to these cases to make any personal criticisms, nor because their methods are entirely different from mine. Neither do I refer to them because I know that they are wrong, and that I am right, and can prove it, but because this involves the whole question of undercolor, and I want to discuss that in this connection.

I have been told by several persons who have visited the poultry shows and poultry yards of England, that the English breeders excel the breeders on this side in the richness and brilliancy of the color of their fowls; and that they practically ignore the question of undercolor in the show room. We have much to learn from our neighbors across the ocean.

We have a foolish craze in this country for undercolor. I have not heard of any one being excluded from full dress functions because of the color of his underclothes, but if the ones who set up the standard of dress were of the same mind as those who make our standard of dress for our fowls, it would be obligatory on one to wear a certain shade of underclothes. Many fine birds dressed in royal robes of the most correct and exacting styles are debarred from the company of their inferiors because their underclothes are not the shade some one thought they should be. To an outsider it must look mighty silly.

Did you ever examine the undercolor of a parti-colored bird of gorgeous plumage, whether from the tropics or from our own woods? Did you ever see one with a very highly colored surface, that had an absence of white in the undercolor? No, sir, and you never will.

Did you ever look into an artist's box of colors? Did you notice that his tube of white was larger than any other? Did you watch him paint, and notice how he would mix white in most of his combinations to produce the desired shades? Do you think he could take some red, brown and black paints, and without any white, mix them until he produced a rich mahogany? If you think you can do that, just try it! After a few trials you will wake up to the foolish proposition of having a standard require you to get that result, by mixing colors with your birds and not use white.

There is not a Partridge Cochins breeder in America who claims to produce fine birds of both sexes from dark under-colored males that would want you to go through the files of the express office at his town, and let you find out just where his exhibition females did come from. No one can get rich mahogany colored pullets from a dark undercolored male. With

an absence of white the colors will not mix and make mahogany.

When I began to breed Partridge Cochins in 1875 the poultry journals contained articles as they do now, saying as the above writer does, that it is necessary for best results to have two pens, one for each sex. I have never bred that way and I never shall.

A man with a pen of Partridge Cochins sends to a breeder who grows his birds on the double mating plan, \$5 for a cockerel for new blood. I wonder if there has ever been a case where the breeder wrote back and told his customer that he could send him a cockerel that would not give him one single pullet that a lover of the breed would have on his place over night, or he could send him one that would not produce one good cockerel in a season's breeding, and ask him which he would prefer. Is one treating a customer honestly if he does not so write?

In my early days as a breeder I got some fine Black Javas. In two years my chicks came with red necks. After eating those with red necks I only had one cockerel left with a black

flock such as the one who breeds on the double mating plan never dreamed of owning.

Some writers say to use a male with light surface color for your pullets. If you do that you will spoil the ground color of your pullets. Mix in your light color by having white undercolor that does not show.

I have not bred Partridge Wyandottes, but my opinion is that this same way of mating will produce good results with them. I give this simply as an opinion, as I do not know by experience.

I am of the opinion that this question of undercolor is of the most vital importance in breeding all parti-colored fowls and I hope the day is not far away when one can take his best breeding birds into the show room.

[While Mr. Harrison has directed his argument mainly in the line of Partridge Cochins coloring, his article brings up the question of the effect of undercolor in the production of all parti-colored fowls. This mixing of color matter to produce desired colors and shades is something which has heretofore been given little attention, either by the breeders or the standard makers. It is indeed an important matter, and we hope that fanciers will give the question a thorough discussion in these columns.—Thomas F. Rigg.]

CARE OF INDIAN RUNNER DUCKS.

Written for American Poultry Journal by W. M. Sawyer, Lancaster, Mo.

The Indian Runner is, in my estimation, the best all purpose fowl yet produced. They are suited to both the poultry fancier and the average farmer. They are easy to raise, being very quick motioned, they move very rapidly and keep out of the way.

Where another duck would be a nuisance, they are great foragers, and if allowed free range will pick up a large portion of their living.

If a market duck is wanted they fill all requirements, growing to market size in nine weeks. The average farmer has all the facilities for raising a goodly number of ducks, and may with a little outlay, add considerable to his income. We find it is easier to raise ducks than chickens. After the first few weeks they require less care. They are less subject to disease and the food question is not so complicated. They hatch well in incubators and are easily reared in brooders. They grow three times as fast as chicks and after the first few days are sturdy, independent little fellows. I find the care of them a fascinating pleasure.

For the first few days keep the brooder at the proper temperature, giving warm water to drink when first let out in the morning. Water should be supplied fresh at least twice daily. A fountain is the best drinking vessel for the first few weeks as it keeps the little fellows out of the water. It is not good for them to get wet while quite young. Be sure to have the water deep enough for them to get their heads under as this keeps them from having sore eyes and keeps the food cleaned out of their nostrils.

Be sure there is plenty of shade, either natural or artificial. A duckling cannot live in the hot sun all the time.

For ratios for ducklings for the first few days feed cracker crumbs, bread crumbs moistened in water and hard-boiled eggs. Keep a little coarse sand in their drinking vessel. Feed about four times a day and give them what they will clean up. Don't let food lay before them. It will sour and be unfit for them to eat. After the first four days, feed the following mixture: Wheat bran, two parts by measure; corn-meal, one part; rolled oats, 50 per cent of this bulk; beef scraps, 5 per cent; sand, 5 per cent; green food, 10 per cent; mix dry, then moisten with water or sweet milk to a crumbly state and feed four times a day until they are about three weeks old.

After they are three weeks old they can be fed a coarser ration and will grow like weeds and prove the most profitable of any fowls on the farm. To grown up and laying ducks we feed twice daily.

In catching or handling ducks never catch them by the legs as they are easily crippled. Catch them by the neck. You will not hurt them that way, as they do not try to get away. To catch them make two frames two by four feet square out of lath and tack cheese cloth or muslin on one side of these. You thus have two frames each two feet high and four feet long and by taking one in each hand a person can hem one or more ducks up in one corner of the yard or house, or up against the side of a two foot poultry netting fence and sort them just as you please without crippling a single duck.

They are easy to control as a two foot fence will inclose them. They will make no effort to fly over it.

SECOND PRIZE "TRINGLET" COCKEREL WISCONSIN STATE SHOW
BRED AND OWNED BY KING BROS. OSHKOSH WIS.

BARRED PLYMOUTH ROCK.

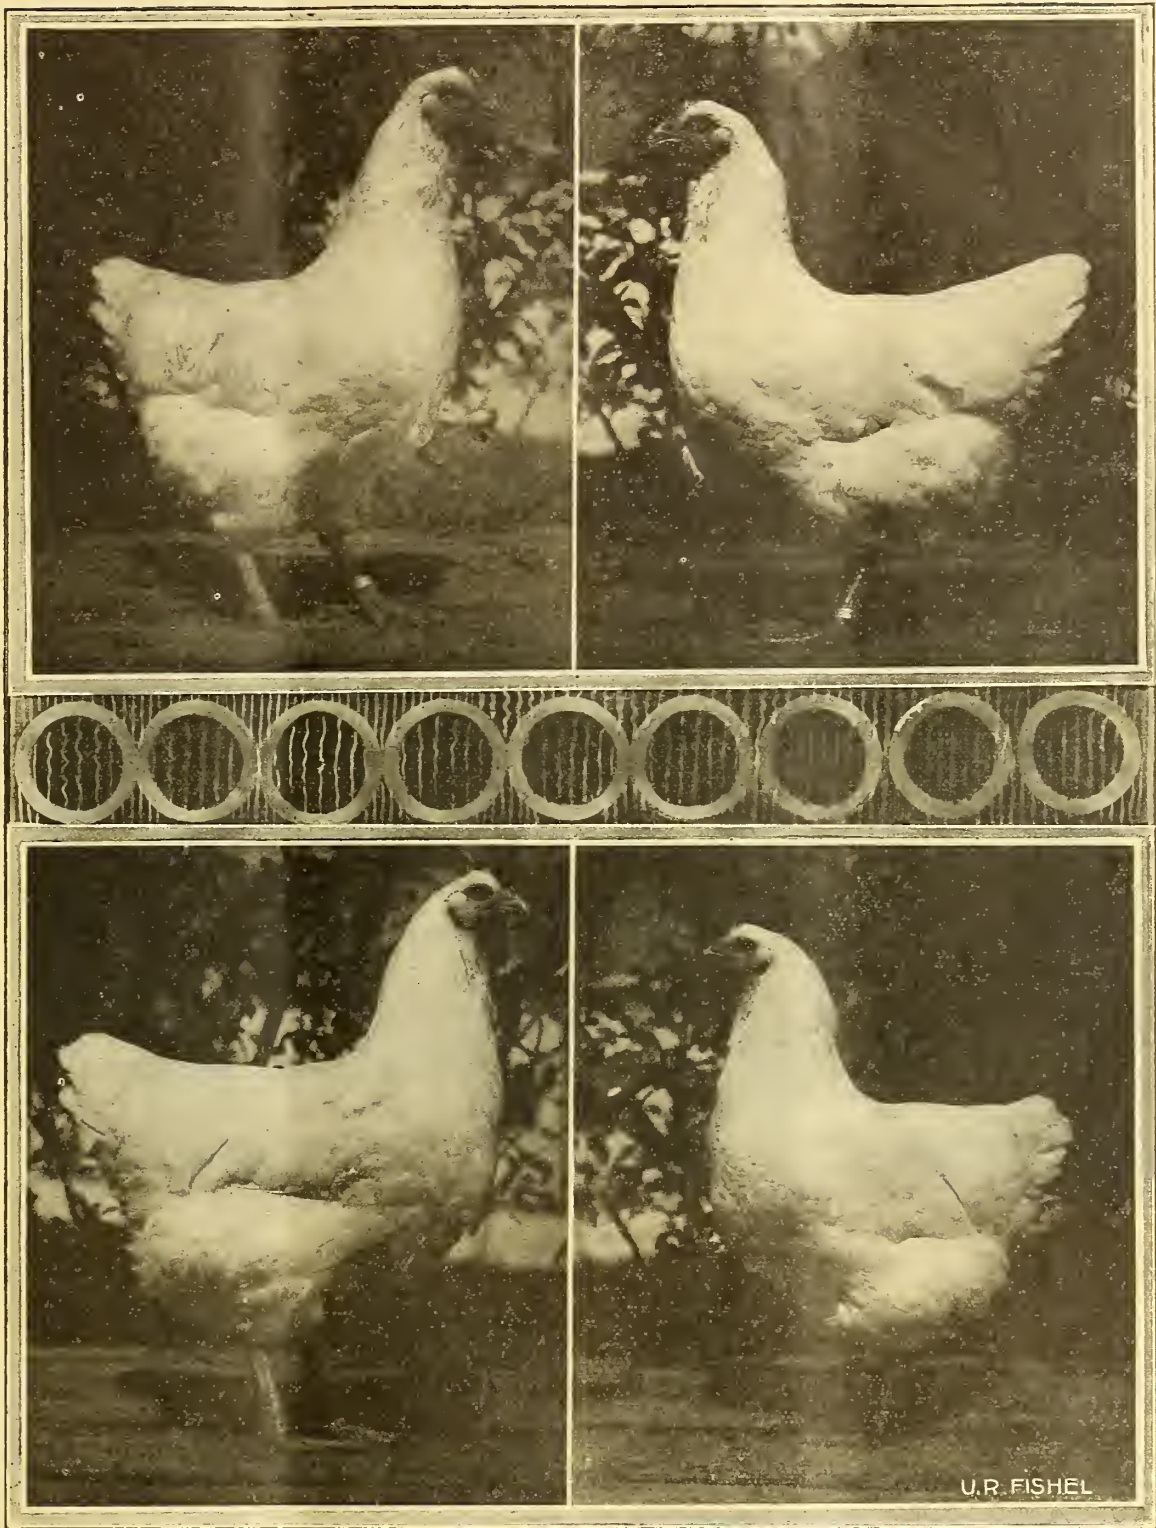

Second prize cockerel at Wisconsin State Show. Bred and owned by King Bros., Oshkosh, Wis.

neck. He had considerable white on him. The chicks raised that season were very fine and it taught me a lesson. I never had any more red necks on my black fowls. That experience caused me to lose all fear of white undercolor on my Partridge Cochins.

In going through the files of the poultry journals for the past thirty years you can make a list of hundreds of men and women who once bred Partridge Cochins who do not breed them now. True, tastes will change, but you never saw one of them that will not now become exceedingly enthusiastic over a fine Partridge Cochin, and tell you that no fowl is more beautiful than a well bred Partridge Cochin, none better on the table, none more easily cared for, none that will stand confinement better, or lay more dollars' worth of eggs in a year, but it is so hard to produce fine specimens.

It does not matter how many breeders object to my position. Anyone may prove which is the right way by trying.

If you will take a standard female and a male with rich dark standard surface color, but white undercolor, you will get half of the pullets show birds and one-fourth of the cockerels show birds. Your most valuable males you cannot send to a show on account of some crank making a motion and a lot of disinterested men voting yes, without knowing why they did it. But never mind, keep on breeding and you can show a

FISHEL'S WHITE PLYMOUTH ROCKS.

Four prize-winning females at the Indiana State Fair. Bred, owned and exhibited by U. R. Fishel, Hope, Ind. Birds of the Fishel type always win wherever exhibited.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

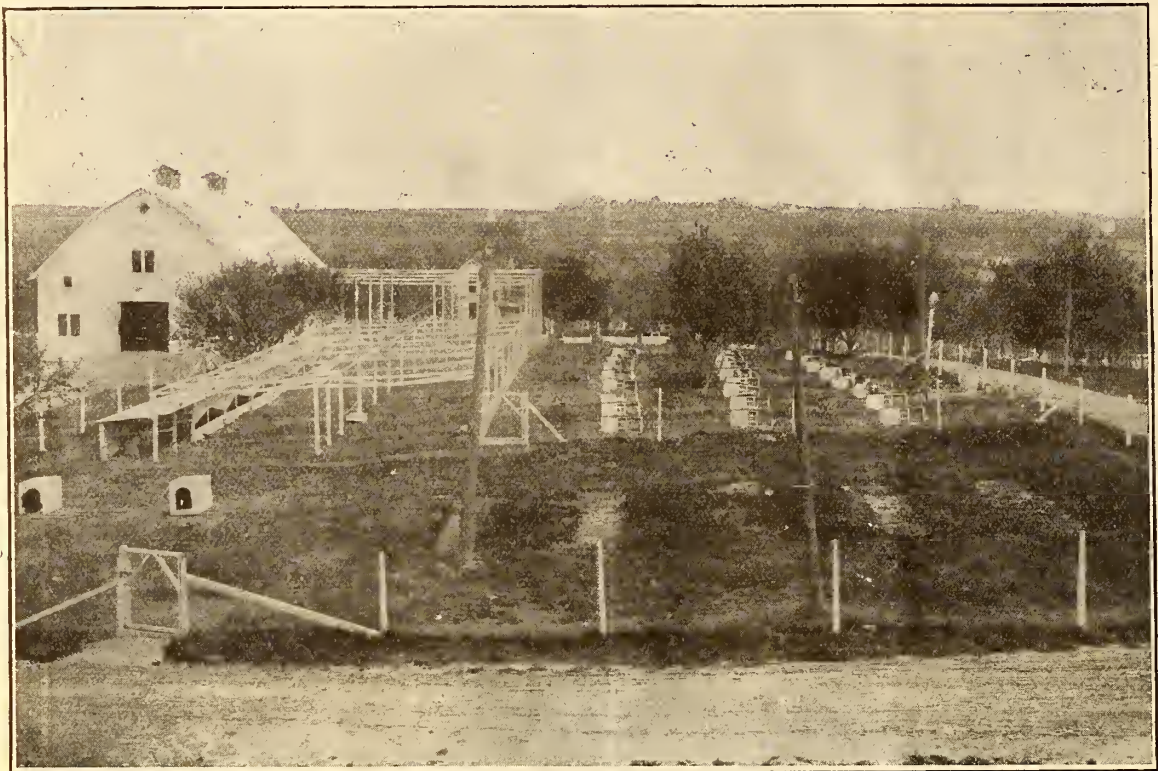

The first prize in the contest this month has been awarded W. S. Mulholland, Ames, N. Y., and the second prize to E. E. Whitney, Ann Arbor, Mich.

LIGHT.

It is readily apparent why one of the earliest creative fables of the creator was "Let there be light." And fortunate for all forms of creature and plant life in obedience to that great

is one prolonged twilight and that they may expect the darkness of night any time, so there they sit on the roost all day long, patiently waiting for the slumber hours of night. Chickens go to roost in the twilight and if your window space dims the winter sun so that the light in your hen house is just a nice twilight, you may depend upon it your hens will go to roost and they will stay there pretty much of the day and if they are on the roost day and night, of course they will not lay. Have you guessed yet what the matter is with your hen house windows? If you have not the next time you go to the hen house look and see if they are as clean as your parlor windows, and if not, why not? If light is so essential for you why is it not just as essential for your fowls, if not more so?

Just try the experiment of giving them a good thorough washing. Take them out and wash off all the dirt and dust and grime, then ask mother or wife or sister how she washes her windows with "Bon-Ami," and you go and do likewise and note results—see if it does not pay. If hens are worth any attention they are worth this one at least. Then you may further enhance the cheerful conditions of your chicken house by giving it a good whitewashing, which in addition to supplementing the sunlight, disinfects and purifies the building. These things I know seem trivial, but they are of vital importance since they contribute greatly to the neutralizing of the unfavorable conditions of winter. Now let me urge this little

Brood and nursery yard on the Kellerstrass Farm, F. R. D. 1, Kansas City, Mo., where over 6,000 "Crystal White Orpingtons" were raised this season. We will publish different views of this great poultry farm from month to month. It's one of the world's greatest poultry plants.

divine command, "there was light." For it is one of the great requisite fundamental elements necessary to a living existence. The world's sad lamentation is one that grows out of an absence of light. The fate of the poultry industry is no more favorable in this connection than that of any other enterprise. Providence certainly cannot be charged with a slackness to supply this great factor. It beams in abundance upon us. The neglect is ours to appreciate it when and where we need it, and poultrymen are no exception.

Has it ever occurred to you that that ever annoying habit that so many flocks of fowls contract during the winter months, namely, forever sitting on the roost, when they ought to be scratching in the litter or on the nest laying, is in no small measure due to a lack of sufficient light? You say my window space is ample and arranged upon scientific poultry principles, which may be true, but do your windows admit the light? I have seen the window space in many a hen house where for the life of a man one could not tell whether the windows were intended to admit the light or exclude it. Too many poultry houses admit just light enough, together with the short lowly days of winter to impress the flock that winter

task upon you. Do it some bright, warm day before winter sets in and you close up the fowls for good.

A friend of mine tells a story of a Jew whose wife once asked him what they were going to get their baby for a Christmas present, to which he replied, "Rachel, Rachel, vash de windows and let him see the street gars go py."

Suppose we treat our fowls this winter to a clear, undimmed vision of the winter sunlight by supplying their houses with unclouded windows.

W. S. Mulholland.
Ames, N. Y.

QUESTIONS FOR EVERYBODY.

My 10-year-old boy asks me why I do not send questions to the American Poultry Journal's Question department. I tell him that I find in it answers to more questions than I could ever think of and besides, the editor's patience is sufficiently taxed to answer the same questions over and over again, as well as some which anybody with the least bit of common sense need never ask.

Now I will not impose upon the editor by requesting him

to answer my questions, but will propound them to the readers. Many questions sent to the Journal are eminently proper and thousands of people are interested in the answers, but if one wants information about some disease which is carrying off valuable fowls every day, why wait a fortnight or longer for the answer? Why not send the money for a book on poultry diseases, treatment, etc., and get right after that particular trouble at once? Why not study that book and be prepared to recognize and cope with these common ailments as they appear from time to time?

There are other aspects of the poultry business upon which I want information. If a person is so attached to his or her fowls that they can not bear to have one killed for the family to eat, is that idolatry or supersensitiveness, or what? And what is the remedy?

Suppose a man goes out in the evening and finds some newly hatched chicks which he fears to leave with the hen all night lest they be trampled, and suppose he takes them to the house, wraps them in flannel and lays them in a basin which he places on the warm water in the kitchen stove reservoir. His wife knows nothing about it, and in the morning she starts the fire and scalds those poor little chicks. Should the husband be roasted every day for a month? Is it sufficient cause for a divorce? Which should start the proceedings, and what are the proper legal terms to describe the action?

Or, again, suppose there is one brood hatched out, and the brooder has to be kept in the house, and every night regularly one little chick persists in getting away from the hover into a corner and sets up such a peeping that a man can not sleep. Should he strangle it in the brooder and let his wife find it there dead in the morning? Or, is it contrary to rules of etiquette for him to put it in his breast pocket, cuddle it up and both go to sleep? Or should he put it in his sock and put it in the foot of the bed? Would the bed kick?

If a person dreams about driving 200 young chicks across a river on the ice in October, and one by one they all fall through holes into the water, and he swims about for an hour and rescues fifty-six of them while his wife dries them up in the oven, is that a sign that he is in the swim as far as poultry is concerned? Or is it a symptom of "hen fever," or something worse? Does any one think that eating Frankfort sausages for dinner would cause such a dream? Should a chicken man eat chicken pie?

Did any one ever find a full grown chick dead in the shell with its head in the small end and the air cell at the other? Would the incubator that is guaranteed to hatch every fertile egg turn that chick end for end and so give him air and strength to break out?

If a groceryman is troubled with insomnia should he go out in the middle of the night and dig in the garden, or should he go to the store and candle and pack eggs to ship away? Or should he sell out his store and go into poultry raising and fruit farming, and, to pay expenses while learning the business should he buy and sell butter, eggs and poultry?

Wherein is the profit if a man makes money "hand over fist" in business in town and sacrifices his health? Throw away pride and gain health and happiness in poultry keeping, even if you are looked upon as a "hen farmer" or "huckster." What?

E. E. Whitney.

Ann Arbor, Mich.

POULTRY HOUSE CONSTRUCTION.

The Model Poultry House of the Future Will Be Inexpensive, Light, Dry, and Admit of an Abundance of Fresh Air and Sunshine.

Rev. C. C. Hersman, of the Union Theological Seminary, Richmond, Va., submits the following:

I have read an article in "The Poultry House Symposium." I am somewhat of a novice in the poultry business. If you care to give a novice some suggestions or rather criticism on a poultry house I will take it as a great favor. I will describe mine and ask you to look over it and see if it is satisfactory.

Roosting part is 6 by 12 feet, six feet on north and south and twelve feet on west and east. This part is made as follows: West side weatherboards on 2 by 4 scantling; four inch concrete wall flush with the scantling, hard as a rock, north end next to carriage stall, with a solid wall between this and roosting house. This wall has weather paper next carriage house, weather paper inside next roosting room, and over all these on the inside of the roosting room a nice wall made of a good grade of flooring. On the east I have a scratching house 10 by 12 feet, between this and the roosting house is a solid wall with weather paper next the scratching shed, i. e., over the wall fronting the scratching shed. A door

between the scratching shed and roosting house about 2 by 5 feet. South end has simply the weather boarding, no other filling, or lining of any sort. In west end of it a door 3 by about 5 feet, made of frame only, with poultry netting over the frame, and over this on the outside coarse burlap cloth. Over this door is a good size window. The pitch or height of ceiling is about 9 feet. It is under a loft in which I keep my hay, straw, etc. The roof of the roosting house is under the joists of this loft. The joists are ten inches deep. I put another set of 2 by 4 joists two inches below these, leaving a space of twelve inches. On these 2 by 4 joists I laid dressed planks loosely, with cracks between for the air to circulate. This space I filled with nice wheat straw, perfectly dry. This gives me a roof over the roosting house with dressed boards laid loosely, then a space of twelve inches filled with straw, then the floor of the loft. The floor of the roosting house has a concrete foundation four inches deep, or thick; on this is laid a floor made of flooring pine, with no space large enough for mice or rats to get between the floor and concrete. Now will this house prove satisfactory? I intend to leave the door in the south open during the winter. It rarely ever gets colder here than ten above zero. I should have said that I

WHITE PLYMOUTH ROCK.

Winner of first prize and Ivory Soap Cup at Madison Square Garden, 1907. Owned and exhibited by Rock Hill Poultry Farm, Ossining, N. Y.

have a door in the scratching house in the east side, and a window in the south. The door is a frame with poultry wire netting and burlap, and above this a window. On the inside a wood door, covering all, frame and window, which I can close at night, or any time I see fit. Is the straw deep enough to absorb the moisture? Will the house be dry enough, and not too warm for this climate?

In your article in the "Symposium" you say: "Never again will I have a closed ceiling in a poultry house." Would you call mine a closed ceiling? How do you support the straw on your ceiling? Is your roof any thing like air-tight? Is it made of tin, slate, shingles or what?

We have no particular criticism to make regarding this house. It is well made and will, we believe, admirably serve its purpose. It could have been cheapened somewhat without detracting from its usefulness.

It is not, however, the style of house we would build. It is one conforming with the custom of the times, which is to make the poultry house as warm as possible in seeming disregard of all other considerations. The truth is the air-tight

house of the present day is not a warm house. It is illy ventilated and hence cold and damp. The poultry house of the future will be inexpensive, admitting air and sunshine, and hence dry. It is cold, pure air that fowls must have, and this free from drafts. Rev. Hersman has overcome the disadvantages of the enclosed house in a measure, in that he has provided an escape for foul air through the straw above. Also by leaving the door open he will admit fresh air.

In stating that never again will we have a closed ceiling in a poultry house we meant just what we said. We have the ceiling somewhat open, and above this, and between the ceiling and the inside of the roof is a space of several feet, this loft being filled with straw. We think Rev. Hersman will not get the best of results with but a foot of straw unless he has considerable space above the straw. The roof certainly is air tight. The loft has a window on the east, which is kept open nearly all the time. The straw in loft is supported by narrow boards laid across the 2x4's.

PREPARING POULTRY FOR THE MARKET IN FRANCE.

The art of presenting an article to the public with taste, if properly cultivated, ensures success; this particularly applies to the case of poultry. This may explain why the French devote such scrupulous attention to their volaille, or poultry. Their sole ambition is to catch the eye of purchasers, the better to grip their pocket; and it pays to adopt such a plan, the more so as it naturally enhances the price of the sale. For instance, take a second class fowl, if the latter is well prepared, made very presentable, there is no doubt that it will realize a higher price than a superior bird offered for sale, about which less care has been taken; buyers will not be induced to purchase under such circumstances. This making up of poultry is not misrepresentation, but is simply intended to render it more marketable, which is, and ought ever to be, an important point with dealers in every country. To kill and dress poultry well, a few lessons taken from a professional person is of greater value than all demonstrations given. However, that does not render useless the supplying of additional hints and counsels, since the latter will prove of great assistance to the inexperienced, until such time as they acquire a more practical knowledge of their business.

For example, take the poultry killers at the Halles Centrales, or Central Markets of Paris; so skillful are they that they are able to kill and pluck as many as thirty-six pullets an hour. All poultry before being killed should be kept without food for at least eighteen hours. It is also considered a good plan to give the birds a few mouthfuls of milk before killing them, as that method not only whitens the flesh, but also loosens the bowels. Some poultry farmers add a few drops of vinegar to the milk, but the latter idea is not generally recommended, as it is apt to affect the flesh. After giving the special feed, the poultry are placed back in their cages, the latter being covered over with sheeting so as to concentrate heat—a step which greatly facilitates the operation of plucking. It is necessary first of all to have a pair of scissors, or a very sharp knife, and so save the birds useless suffering.

The bird is then taken, and its feet placed between the operator's knees; next the head is seized by the left hand, the bill opened, and the scissors thrust into the throat to cut the arteries situated at the back of the mouth. The fowl is then suspended by the feet, head downward, so as to allow the blood to freely flow away. Many persons are of opinion that the blood is lost; quite the contrary, for it is purchased by the poor for culinary purposes. As soon as the blood has stopped flowing, the interior of the bill is washed out with vinegar. Another plan exists for killing, which consists in passing a lance, or the blade of the scissors, through the palate into the brain of the bird, cutting the arteries of the throat, and so induce the blood to fully trickle away. This method is concluded to secure a whiter flesh. In the central markets a scar a good inch in length is made a little above the ear, the carotid artery is severed, the blood exudes abundantly and the bird is finally suspended in the same position as before—head down—the better to bleed.

A finger is introduced into the rectum, the intestines seized, the bird turned over, so as to allow the coiled contents round the finger to be cut; one end of the intestines is retained, and cautiously drawn outwards, when it is severed at its origin, near the gizzard. The latter and the liver ought to remain inside the bird. This cleansing process is a necessity since if the intestines were left for any time in the bird, they would certainly affect the flesh, and ultimately bring about decomposition. To fill up the place which they occupied, gray paper is introduced, the latter "stuffing" also serves to maintain the volume and form or shape of the fowl. Of the three methods

adopted for killing poultry, the last described is the most general, though it leaves a rather unsightly wound, and induces decomposition more rapidly. The cleaning operation effected, that of plucking commences; this should always be done as rapidly as possible, and with the greatest care. Professionals at the Halles Centrales of Paris remove the feathers from off the breast, stomach, and back. That done, the birds are next handed over to a special class of women, who finish the plucking of the neck, wings, and sometimes of the tail. In all cases, the plucking should be finished before the body cools.

In one of the French provinces which is in the habit of sending dressed poultry to the city market, it is the custom to leave a "ring" of feathers, as it were, around the neck, resembling a collar, in a word; in other French towns the tail-feathers only are retained. In the Houdan, Chartres and Gâtinais districts only a few feathers are left on the wings. In Normandy, this is not the case, where the plucking is complete; in the South of France, farmers do not remove the feathers either from the tail or wings. Before the fowl is completely cold the trussing operation takes place. The bird for this is taken in both hands, the legs raised in such a manner as to have the thighs on a level with the back; the lower part of the legs are then passed under the wings. The aim is to have the thighs on a level with the spine, and so impart a square shape to the bird, with which shape purchasers in France are in favor. The birds are then ranged on a plank, on their back, with heads down so as to allow the last drop of blood to exude from their body; that done, another plank is placed across their breast and weights placed thereon in order to "crush" the fowl and impart a broader appearance to them—another attraction for buyers. To secure birds in such a presentable condition implies adding 15 per cent to their value; sufficient to pay for the expenses of their dressing. In Bresse, farmers' wives are still more particular, as will be seen; the fowl in that part of western France is inclosed in a linen cloth previously moistened with milk; this is done to secure greater whiteness of flesh; nor is this all, for a second cloth, of a coarser kind, and pierced with eyes, through which strings run, is employed; in the latter the bird is finally placed, and so laced up tightly. All this gives to the delicate poultry of Bresse that long oval form, which is ever so flattering to the eye of the majority of customers; further, the coarse linen cloth has the advantage of imparting a shagreen aspect to the skin, which is so much sought after by many persons.

However, it would be erroneous to conclude that every market adopts the same methods of preparation; as a general rule, they each have their own tastes and likings. For instance, some insist upon having poultry quite flat in shape, being strictly opposed to all kinds of artificial swellings and fanciful forms; others prefer poultry round and elongated; while again, there are admirers of the short, stubby, and square shape. Cloth must be cut accordingly as will be seen, in trying to please the various tastes and whims of purchasers. Strange to say, the English system of killing poultry is not approved of in France. True, the latter method may reduce pain—for it is veritable decapitation—but the flesh of the bird is not considered so white nor so delicate in point of flavor as when French ways are resorted to. Great care in any case should be taken to allow the birds, when dressed, full time to become perfectly cold, before packing them prior to sending them to market. To neglect such a precaution may involve the fermentation of the poultry, and their rapidly acquiring the dreaded greenish tinge. Each bird ought to be wrapped up in white paper, not in newspapers, the print being most dangerous; each layer of birds ought to be separated with the driest of clean straw, that of rye, if possible, is to be preferred. Of course "alimentary trains"—such as exist in France—will be chosen to transport such "perishable goods." The rates of transport are extremely moderate, being the same as for ordinary goods. These quick-running or express trains arrive in Paris at 5 o'clock in the morning, hence the poultry has to be delivered at the station of departure fully three hours before the special express train leaves for the capital; no delay should either occur on arrival on the part of the poulterers—a fact which is equally important. The expenses for the sale of the poultry in the Central Markets of Paris are very high indeed; the auctioneer's fee alone is 3 to 5 per cent, according to quantities. It is best never to send a smaller consignment than one hundredweight. Unsold goods can only be kept over for two days, after that time, if unfit for food, they are at once destroyed. The parcel post has proved a great boon to householders; they can now receive twenty pounds' weight of poultry from any part of France, in the same way as butter, cheese, fruit, etc., in Paris, for the modest sum of one franc (20 cents), and this without the least trouble, and last but not least, with the complete assurance that the products received are as genuine as they are fresh.

London, England.

Edward Conner.

HOW TO GET A BIG EGG YIELD IN WINTER.

The demand for strictly fresh eggs during the late fall and winter months far exceeds the supply and prices rule very high during that period, and the breed of hens and the system of managing them that will produce a good egg yield at this time of year is being much sought after. This can be accomplished by starting in the fall with a good laying strain of fowls and managing them in a systematic way, giving them summer conditions in feeding throughout the winter.

Selecting the Layers for Winter.

It is a well known fact that the laying qualities of any breed of fowls can be much improved by always breeding from the best layers, as well as can the milking qualities of cows be brought up to a high standard by always breeding from the best milkers. In selecting your flock for winter laying, get a good breed to lay strain of whichever breed you choose to keep. Select the early hatched pullets and one year old hens that moult early in the season so their new feathers will get ripened up by November, when they will be ready for business during the winter. This is the foundation of your winter egg production. No system of feeding or care will get winter eggs from late hatched pullets, or old hens that moult late.

Housing the Flock.

The poultry house for the winter layers must be well made and warm with proper ventilation. A scratching shed should be attached to the house with wire netting front facing the south, with muslin curtains to let down on the inside in stormy weather to keep out the snow. No artificial heat should be used in the house, but the hens must be warm and comfortable at night. The long, cold nights in zero weather strike a death blow to winter egg production unless the hens can be protected. To accomplish this the roost must be arranged to have well papered walls on three sides with a frame hinged at one end two feet above the perches covered with muslin run up by a pulley when not in use. This must be let down over the hens in zero weather with a curtain to drop down in front, inclosing the whole roost down to the dropping board. The heat generated by the hens under this covering will keep them warm and comfortable all night. In the daytime they will keep warm by scratching in the straw in the house and in the scratching shed. The floor of the house and scratching shed must be kept covered with a good depth of straw and changed as often as it gets damp and foul. Whenever the old straw is taken out, sprinkle the floor with air-slaked lime, then put on the new straw. The fixtures of this house should consist of nest boxes fastened to the wall with canvas covers in front to hide the nests, which should be of fine cut straw and plenty of it to make a warm, comfortable nest. Rows of boxes fastened to the wall about six inches from the floor filled with beef scrap, ground oyster shell, granulated bone, charcoal, grit and dry bran; feed troughs made V-shape to set on the floor to feed dry mash and dry cut clover in; earthen crocks set on a raised platform for water; a table ten feet long, three feet wide and three feet high, set in the center of the house, with side strips around the top six inches wide. Mortar made of lime and sand and dried should be kept on this table at all times covered with straw. The table adds to the floor space of the house and gives the hens good exercise in flying up and off the table and scratching in the straw. A roomy dust box should be provided and always kept filled with road dust or sifted hard coal ashes. The dropping boards should be cleaned off every day and sprinkled with road dust or land plaster. Don't use much lime for this. The perches should be sprayed once a week with a liquid louse killer and every two weeks must be thoroughly oiled with kerosene oil, put on with a brush and flowed into every crack and crevice. Under this thorough treatment lice and mites will be unknown and the hens will enjoy life.

No hen, covered with lice and worried by mites at night, ever laid an egg in winter. Don't think for a moment that lice and mites don't get in their work in cold weather, for they do.

Feeding for Winter Eggs.

To make hens lay in winter they must be fed a balanced ration of different kinds of grain, animal and vegetable food every day and plenty of pure water that is never allowed to reach the freezing point. One of the most important items and the most neglected is the drinking water of winter layers. A large per cent of the egg is made from water and hens will not drink enough ice water to produce them. The last thing a hen does before going onto the roost and the first thing in the morning is to drink water. The water crocks must be emptied at night and filled early in the morning before feeding with water that the chill has been taken off, not warm, and it should be kept that way throughout the day. Under no cir-

cumstances must hens be allowed to drink ice water or get their feet in the snow. They should be kept in the house and scratching shed when there is snow on the ground and on cold, windy days.

Wheat, oats and buckwheat should be scattered in the litter morning and at noon, whole corn at night fed in the feed troughs, corn to be warmed in very cold weather. Feed a dry mash and cut clover dry every day. No wet food of any kind, no boiling oats or steaming clover, but feed it dry. The hens will take all the moisture into their crops they want and just when they want it from the water crocks without being forced to take it in their food. Keep beef scrap and dry wheat bran before them at all times with plenty of oyster shells, grit, granulated bone and granulated charcoal. Feed either cabbage or mangle beets every day. Split the mangles in halves and drive a spike through them into a piece of plank and let the hens pick at them. Throw the cabbage on the floor, don't follow that old fossil notion of hanging cabbage up from the floor two or three feet, so the hen will have to jump up to give them exercise. That kind of exercise is a positive injury to laying hens. Don't over-feed, but give the hens all they

First prize Barred Rock cock at Wisconsin State Show, 1906. Bred and owned by King Bros., Oshkosh, Wis.

will eat up clean. Don't be afraid of getting them too fat, poor hens don't lay eggs in winter.

Hens fed and managed according to this system, as described in this article, will be contented and happy and lay plenty of eggs during the winter months, but you must not expect eggs from hens that stand around all day on one foot in the snow under the shelter of a barbed-wire fence, eating ice and roosting on a wagon wheel at night in zero weather.

To make a success of winter egg production it is of the utmost importance that you breed a good winter-laying strain of fowls. It is no trouble to get most any kind of a hen to lay in the spring and early summer, but to get them to lay well in the late fall and winter months is quite another proposition. I have made a specialty of winter egg production for the last seven years with mottled Anconas, a breed of fowls that are noted for their winter laying qualities. But by careful breeding from the best winter layers during these years I have established a remarkable winter and all-year-round laying strain. I have plenty of breeders in my yards that will lay 270 eggs in a year. Many pullets of my bred-to-lay strain laid twenty-six eggs each in December and other winter months, recorded by the trap nest. And by my system of feeding and managing as described in this article I have never failed to get a big egg yield in winter.

HATCHING CHICKENS BY ELECTRICITY.

New and Interesting Development in the Science and Practice of Incubating and Brooding Chicks and Ducklings by Artificial Means.

Electrically Operated Incubators and Brooders as Exhibited by Cyphers Incubator Company of Buffalo, N. Y., at the Thirty-second Annual Convention of the American Poultry Association, Niagara Falls, N. Y., August 13-15, 1907.

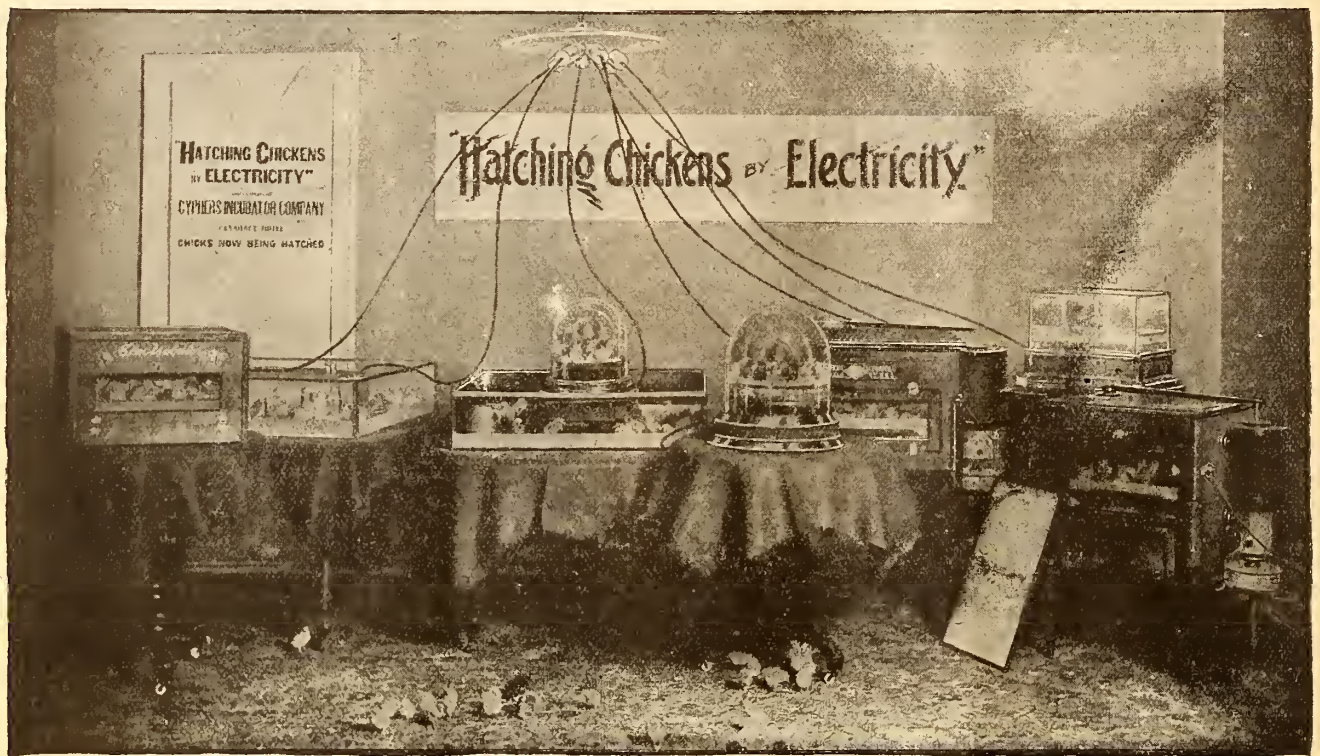

By Grant M. Curtis, President Cyphers' Incubator Company.

During the recent annual convention of the American Poultry Association at Niagara Falls, a most interesting display of electric incubators, electric brooders and electric thermostats was made by Cyphers' Incubator Company, showing chicks being hatched and brooded literally by the hundreds by means of ordinary electric current produced by the Falls of Niagara. This exhibit attracted unusual attention. Old and experienced

odors, the filling and cleaning of lamps, the trimming of wicks, etc., are avoided. This makes these devices especially attractive for use in the homes, office buildings or stores. They are dirtproof, fireproof and shockproof.

The "electrobator" is a six dozen egg capacity electric incubator, designed especially for the use of poultry fanciers and other poultry raisers who reside in cities or villages where ordinary lighting current is obtainable and who do not require large hatching capacity. It is constructed of quarter-sawn oak, mission finish, and is as attractive in appearance as a music box. The machine shown in the illustration herewith was in successful operation at Niagara Falls and hatched the chicks shown in the picture. The photograph from which this half-tone was made was taken at Niagara Falls, during the A. P. A. convention, by a local photographer.

Inasmuch as no odor, gases or dirt of any kind attaches to its use, the "electrobator" can be used and will do satisfactory work in living apartments and offices where the owner of a lamp machine would not find it desirable to run an incubator heated by kerosene oil. The "electrobator" is as odorless and as free from dirt in all respects as an ordinary electric lighting fixture, and is practically as easy to use. The operator merely turns the button and "the silent current does the rest."

SOMETHING NEW UNDER THE SUN.

Photographic view of section of the remarkable exhibit made at Niagara Falls, August 13-15, 1907, by Cyphers Incubator Company, Buffalo, N. Y., in connection with thirty-second annual convention of American Poultry Association. Hundreds of chicks hatched and brooded by electricity.

poultrymen made repeated visits to the large room in which the exhibit was held.

Herewith is shown a photographic view of this unique exhibit as made at Niagara Falls last August, except that the articles shown in the picture were arranged around the large room, and several interesting pieces are not shown in the illustration. In these new and novel electric incubating, brooding and regulating devices, the necessary heat was obtained from ordinary incandescent lamp electric lighting fixtures. In other words, the apparatus here referred to can be used with safety and convenience wherever ordinary electric lighting current is available twenty-four hours of every day, Sundays included, during the hatching and brooding season.

One of the separate illustrations presented herewith shows the "Electroplane," a device so constructed that it can readily be placed in the hatching chamber of any of the oil incubators now in use throughout the civilized world, its purpose being to supply electric heat in place of the oil heat commonly used, without interfering in any way with the use of the incubator as a lamp machine, if that is desirable. By means of this device the disagreeable features of oil incubators, i. e., fumes,

The electric adaptable brooder shown in the accompanying illustration (photographed at Niagara Falls August 15, 1907), was designed to take care of chicks after they are hatched. The temperature is maintained automatically at 90 degrees to 95 degrees for the first week and after the chicks are older the regulator is adjusted to from 80 degrees to 85 degrees, until finally the artificial heat is dispensed with entirely. In this device, as in all others referred to, an electric thermostat cuts out the current whenever the temperature goes above the required degree, and turns on the electricity, automatically and infallibly, when the temperature in the hatching or brooding chamber goes below the required degree. When the current is cut off, there is no cost for operation—none whatever. As regards the cost generally of operating the electric incubating and brooding apparatus herein described, an ordinary 16-candlepower incandescent electric light will supply sufficient heat to run a No. 1 Standard Cyphers' Incubator, capacity about 144 eggs, in a room in which the temperature is 45 degrees and the current will be "on," i. e., passing into the machine, only about one-half the time. This fact has been demonstrated by repeated tests.

The "electrohen" (see illustration) is the trade-name for a unique and artistic oval glass, electric hatching device to be used for advertising and educational purposes—for advertising purposes at poultry shows, in store windows, etc.; for educational purposes in college and high school laboratories, in classrooms for nature study, etc. As is the case with the electrobator—also with any hatching machine of ordinary type, equipped with an electroplane—this attractive novelty, the electrohen, is readily connected to any electric lighting

THE "ELECTROPLANE."

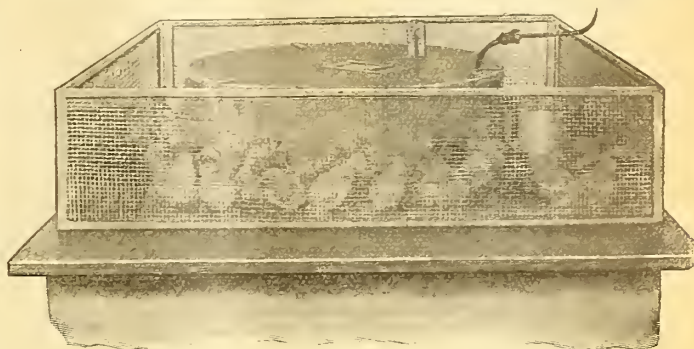

An electric heater for use in the top of the egg chamber of any make of incubator on the market in which it is desired to employ electricity in place of kerosene oil or gas.

circuit, either alternating or direct current, by the usual flexible cord and plug. It is only necessary to "turn the button" and sufficient heat will be provided in the electrohen for hatching and brooding the chicks in the one machine.

For example, eggs due to hatch within three or four days can be placed in the electrohen to excellent advantage, with the result that spectators can witness, in plain view, the pipping and breaking of the shells, the exclusion and drying off of the chicks or ducklings, while at the same time the chicks or ducklings first to hatch will be running about in the nursery department or feeding in the inclosure surrounding the machine.

The electrohen, like the other electrical apparatus here described, is entirely free from odors, escaping gas or other

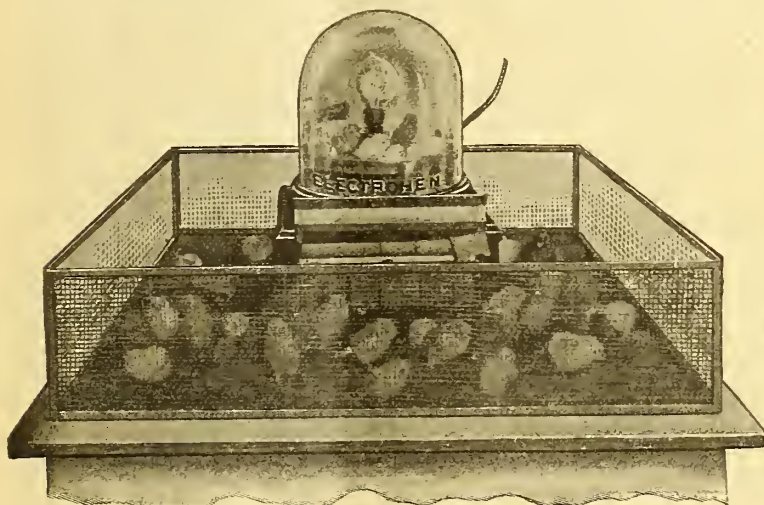

Many friends of Cyphers' Incubator Company have congratulated it as the pioneers in developing and introducing this method of hatching and rearing domestic poultry by artificial means. This was notably true at Niagara Falls last August during the progress of the thirty-second annual convention of the American Poultry Association. Leading mem-

ADAPTABLE ELECTRIC BROODER.

(Photographed at Niagara Falls, August 15, 1907.) Operated and regulated by ordinary electric lighting current. Can be adapted to use almost anywhere.

bers of the poultry press were in attendance and spoke in terms of high praise of the electrical incubating and brooding devices there exhibited in full operation. Such men as Mr. James E. Rice, professor of poultry husbandry, New York Agricultural College, Ithaca, N. Y.; Hon. Robert R. Slocum, poultry assistant, United States Department of Agriculture, Bureau of Animal Industry, Washington, D. C.; C. K.

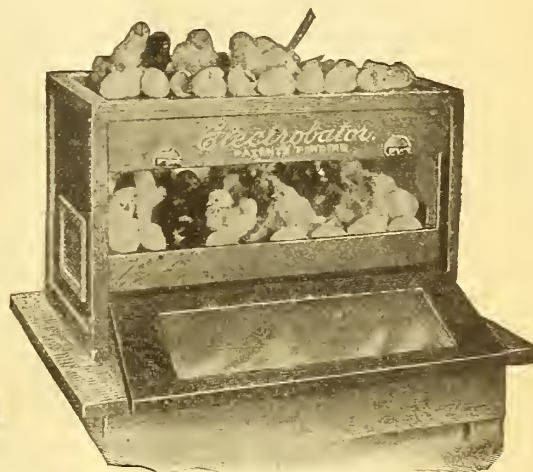

THE "ELECTROHEN."

(Photographed at Niagara Falls, August 15, 1907.) A glass globe incubator and brooder combined (operated solely by electricity), in which the pipping of the eggs and the exclusion, drying and brooding of the chicks or ducklings are in plain view at all times.

offensive elements, hence can be introduced into the handsomely furnished and electrically equipped homes or offices of fastidious persons, including professional or business men, also into school rooms or laboratories without inconvenience or danger.

The advantages of using electricity for incubating and brooding purposes are numerous and important, and the inventors of the machines herein briefly described believe that electricity will be adopted generally, within the next few years, in all cities and villages of the United States and many foreign countries where ordinary lighting current is obtainable twenty-four hours of every day, Sundays included, throughout the hatching season. Permit us to add, further, that the number of such cities and villages is now surprisingly large and they are increasing rapidly. How about your home town, reader?

THE "ELECTROBATOR."

(Photographed at Niagara Falls, August 15, 1907.) An electrically heated and regulated incubator designed expressly for fanciers and poultrymen who require only small hatching capacity. Holds seventy-two eggs.

Graham, professor of poultry culture and poultry manager, Connecticut Agricultural College, Storrs, Conn., and H. V. Crawford, secretary of the New York Poultry, Pigeon and Pet Stock Association, expressed deep interest in this "new departure." Under date August 20, 1907, Professor Rice wrote the Cyphers' Incubator Company as follows:

"I was very much interested in your exhibition of electrical hatching devices displayed at the meeting of the American Poultry Association at Niagara Falls. We would be glad to have you place a sample of each of these devices in our incubator cellar to be operated from our electric current which lights the building, in order that our students and the visiting public may have the benefit of these recent inventions."

The complete catalogue of Cyphers' Incubator Company for 1908 (ready for mailing December 1) will contain a full description of the electrical devices above mentioned.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Saving the Silver Wyandottes.

There has been some criticism regarding the awards as placed on Silver Wyandottes in a number of the leading shows of late. The critics say that often the winning Silvers are not Wyandotte shape and type, citing the fact that they are not of the type of the winning White Wyandottes. These critics, it would appear, are without knowledge of the fact that the most careful and successful and prominent breeders of Silvers are not striving to secure in their birds the shape and type that is now generally winning in the White Wyandotte coops.

The truth is that there is no warrant for the Cochized White Wyandottes to be winning as it is now doing in many shows under many judges. The Standard does not call for such a White Wyandotte, nor a Silver. The breeders of

Silvers protest against their favorite being Cochized and will not stand for action upon the part of Silver breeders to save the grand old Wyandotte, but they will take this action if necessary.

The Cochizing of the White Wyandotte can result in only injury to the variety. It is time the American White Wyandotte Club was giving this important matter the attention it deserves.

The Demand For Quality.

A wise man—we think it was Emerson—has said that a man could go to the top of a mountain and make mouse-traps, and if he made them better than others were made the world would build a road to him and take his product. So it is in the breeding of Standard-bred poultry. The demand for extra choice stock was never as great as it is now, and must of necessity be greater every day. In the first place there are more fowls shown than ever before. The number of poultry shows is rapidly increasing. The offerings by these associations are being annually made more attractive to exhibitors. So it is that the quality of the stock shown is yearly being raised, and the demand for the top stock is now greater by far than the supply. Thus it must continue to be for some time, at least until a very large number of breeders adopt a new system in their operations. Hereafter the breeder who will make the money and secure the fame, is the one who produces annually not the thousands or the hundreds of head of stock, but the few scores of the extra choice ones. There is a field for the breeder who produces annually a very large number of fowls which go onto the farms to improve the common stock of the country. This will always be a profitable business, but it is a business apart from that of the fancier who is breeding to supply the exhibition stock which takes its place in the shows in Chicago, New York, Boston and like exhibitions. There never has been, and there never will be, a season in which the supply of really choice exhibition birds will meet the demand for such stock. Prices paid for such specimens are advancing rapidly. In this field there is and will always be but little competition, comparatively. It is a most inviting field.

American Poultry Association.

St. Louis, Mo., Oct. 15, 1907.—To the Members of the American Poultry Association: I am mailing to your address under separate cover a copy of the proceedings of the meeting of the American Poultry Association, held at Auburn, N. Y., January 10 and 11, 1907. Copy for this book was furnished the printers by the late secretary, Mr. Orr, but on account of his sickness was never proofread by him, which will account for any errors found therein.

The proceedings of the meeting held at Niagara Falls last August will be issued shortly and will contain a complete list of all members of the association. Your name and address will appear exactly as the envelope is directed containing this letter. If you wish any change made I must be notified immediately.

In order to have on file a complete set of the "Proceedings" of all former meetings of the association, the secretary would like to correspond with any

member having in his possession a copy of the "Proceedings" of the meetings held in 1876, 1877, 1880, 1881, 1883, 1884, 1885, 1886, 1889 or 1890.

Very truly yours,

Ross C. H. Hallock,
Sec'y American Poultry Association.

Southwest Branch of American Poultry Association.

In the election of officers for the Southwest Branch of the American Poultry Association, the following were elected: President, Henry Steinmesch, St. Louis; first vice-president, W. C. Knorpp, Pleasant Hill, Mo.; second vice-president, C. H. Rhodes, Topeka, Kan.; third vice-president, M. S. Fite, Oklahoma City, Okla.; fourth vice-president, H. B. Savage, Belton, Tex.; fifth vice-president, J. F. Anderson, Waldron, Ark.; secretary-treasurer, Frederick Pfaff, Anadarko, Okla. These will comprise the executive committee.

For election commissioner, C. A. Morton, St. Louis, Mo.

The American Poultry Association medals and diplomas will be awarded at the Missouri State Show at Sedalia, Dec. 10-14, 1907.

Our Colored Cover This Month.

On the cover of this month's issue we present to our readers a very handsome drawing of a pair of Bronze Turkeys in colors. At this season of the year, the minds of a great majority of the people of this great nation turn to thoughts of Thanksgiving day and the turkey dinner, which has become a part of this holiday, and the Bronze Turkey, which is purely an American production, is depended upon to grace the tables on this occasion, and really should be called the national bird.

We move that the executive board of the American Poultry Association grant a lecturer's license to Fred Grundy, and do it at once. Here is what Mr. Grundy says of himself as a lecturer: "I have talked poultry raising as a money making proposition at a good many farmers' institutes, and was always told that my remarks were entirely different from any they had ever heard. Wherever I talked once they wanted me again. One county called for me four times. I talked to them twice, and would have done so again, but my physician informed me that I would have to go slow or I would entirely lose my voice. One man told me at one of these institutes that he had traveled twenty miles through the mud just to hear me. I asked him to tell me plainly just what he thought of my talk, and he said he was well paid for the trip."

* * *

The management of the Greater Nashville Pet Stock and Poultry Association is arranging for one of the most important shows to be held in the entire South the coming season. It is an appeal to the breeders of the North to go down into this rich field, show their stock, get acquainted with the hundreds of enthusiastic fanciers who will visit this show, and thus extend their trade. The association intends offering prizes which will attract the best breeders of the United States. The pet stock feature will eclipse anything of that nature ever attempted in the South. The dates of the show are December 9-14. Thos. F.

Rigg and Thomas S. Falkner will place the awards, by comparison. Fred Klooz, secretary.

* * *

Miller Purvis is so in love with California that he is willing to resign an office, and that in the American Poultry Association, too, if his successor be named from the Golden State. Hear him: "We would gladly resign our office if we could be assured we could thereby secure for California a representative on the official board of the association. This is not mere pretence. We mean it in the fullest sense and are ready to act at any time assurance can be given us that we can name the state from which an official to take our place is chosen—that state being California."

* * *

S. B. E. Seese has resigned as secretary of the Toledo Fanciers' Company and removed to the Pacific coast. Mr. L. C. Taylor has been elected secretary. The Toledo show, January 21-27, will be one of the best held this winter. "You wait for prize money at Toledo just long enough for the secretary to put his hand in his pocket." In keeping with the demands of the time, this will be a comparison show. Judges: Rigg, Butterfield and McClave.

* * *

The South African fanciers are preparing to adopt a Standard for the various breeds and varieties now popular there. At present the English Standard is used. Mr. Frank R. Kirkland, president of the Transvaal Poultry Club, Pretoria, writes that the American Standard of Perfection is desired by a very large number of the fanciers, and it is very likely that in the adoption of a Standard their wishes will prevail.

* * *

Here is an extract from a letter we recently received from one of Canada's foremost breeders: "My winnings at Chicago Show annually sell me a very large amount of the best class of breeding and exhibition stock at long prices. It is these sales, due directly to my Chicago winnings, that has given me this very profitable trade." This breeder knows this to be a fact. A win at the Chicago Show means much.

* * *

E. de Vigne, formerly sales manager of the Ralston Purina Company, has now connected himself with the Corno Mills Company, of East St. Louis, Ill., as manager of their poultry feed department. Mr. de Vigne brings to the new company all of his up-to-date selling schemes and advertising ideas, and, backed by Corno Quality, will no doubt meet with unbounded success.

* * *

Brother Schureman takes up more than four columns in his journal to show that the manner of licensing judges at the Niagara Falls meeting of the American Poultry Association was contrary to good sense and not in the interest of exhibitors. Could have covered the ground with two words, dear brother—a farce.

* * *

Mr. Frank Sites, who has been more active in the interest of the Black Wyandotte than any other breeder in America, will write for the American Poultry Journal an article which will interest every fancier and ought to do this new candidate for public favor a great deal of good.

* * *

Editor Trafford accuses Grant M. Curtis of stealing the good points of the

committee's report regarding a Standard for eggs and dressed poultry. Well, the best Trafford could do would be to make petty larceny out of it.

* * *

E. C. Elzemeyer, formerly advertising manager of the Ralston Purina Company, has connected himself with the Corno Mills Company, and will hereafter be in charge of the Corno advertising, devoting special attention to the poultry feed advertising.

* * *

Black Leghorns are booming in England, and a club has been formed for their promotion. Mr. E. G. Wyckoff, who is doing much to make this beautiful and useful variety popular in America, finds the demand for them very large.

* * *

The effort now being made to bring the American Dominique to the front will be watched with interest. It is going to take a lot of work and time, but perhaps the breed is worth it all.

* * *

If a certain few of the wise men of the American Poultry Association would take a day off and allow the world to run itself they would secure a needed rest, and would, no doubt, be surprised how nicely everything went along.

* * *

The English type of Barred Rock, as shown in Poultry, London, could not get a place at a county fair in America. Nearly perfect Wyandotte shape.

* * *

Another telling illustration of the truth that the exposition idea is played out in this country, for some time.

* * *

The world's model weekly poultry journal, Poultry, London, England.

"DO SOMETHING."

Now is the time to do things. First, if you intend to build a large house, you should get at it at once, and whatever you do get it up off the ground, that is the floor, and fill in; if you can make a concrete foundation, do so, for you can make it yourself, and it will be vermin proof, which pays, for you can lock up and go to bed without having one ear open.

If more houses are not needed, how about the dirt floors in the old ones? Don't they need digging up and refilling? If so, do it now, but don't refill with road dust. Most every month you will say "Lay in a supply of road dust," but don't do it. Just because a man signs his name editor, is no sign he knows it all. Let the road dust alone and get some good clean soil and fill up with, for what is road dust anyway, just "dirty dirt, horse and cattle droppings mixed." The hens will appreciate the clean dirt. Try it. If your brooders are not clean, clean up. Where did you put the lamps, that thermometer, etc.; also the incubator? Look them over; do it now. Dreaming, are you? And those good old hens—how about their care? Are they free from lice? Look, and don't part with them just because they look ragged. Feed them well; a little beef scrap and oil meal will help. A little extra care now goes a long way toward helping them in their fight against the heat and lice and the drain of the growing feathers. The pullets look best now, I know, and one is apt to part with his hens, but a good motto to tie to is, remember your old friends and any way, wait until they molt.

3

Things That Make Poultry Pay

O.K. ROUP REMEDY

During Fall and Winter look out for Roup and don't be caught napping. Be sure to have O. K. Roup Remedy on hand ready for each case of roup, colds, canker, catarrh, asthma, and the similar affections which are liable to to attack your birds, particularly at this season of the year. O. K. Roup Remedy is a guaranteed remedy for these troubles. It rarely fails to give immediate relief when used according to directions, and is perfectly safe to use. Sent postpaid to any address for 50 cents.

O. K. Poultry Food

To keep your fowls healthy, and the young pullets in prime condition for winter egg-laying, give them O. K. Poultry Food. It will create fresh vitality, renewed vigor and strength, and they will begin laying much sooner and at a rapid rate. O. K. Poultry Food is a pure, guaranteed conditioner that aids digestion, puts the egg-making organs in perfect condition, and keeps the birds lively and strong. The test of these results will be found in the nest and in the general health of your flock. Give it a trial.

LAMBERT'S DEATH-TO-LICE

Keep your fowls free from lice all the year around if you want them to be profitable. The best way to keep lice away from your birds is to use the "old reliable" Lambert's Death-to-Lice. This has never been known to fail. It was always good, but is now better than ever, owing to the recently installed Improved Pulverizing machinery used in its manufacture. Your money back if not satisfactory in every way. Sample for 10 cents; 100 ounces for \$1.00.

O. K. STOCK FOOD CO.,
608 Monon Bldg., Chicago, Ill.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: "How much copers should one put in two gallons of drinking water for 100 hens? (2) What kind of chickens are the Anconas, and what is their weight? C. W. S. La Grange, Mo.

Answer.—(1) Eight ounces to the gallon of water. (2) The Anconas are considered a very fine variety of fowl. They are mottled in color and weigh about same as Leghorns. Shape of male and female same as Leghorns. See American

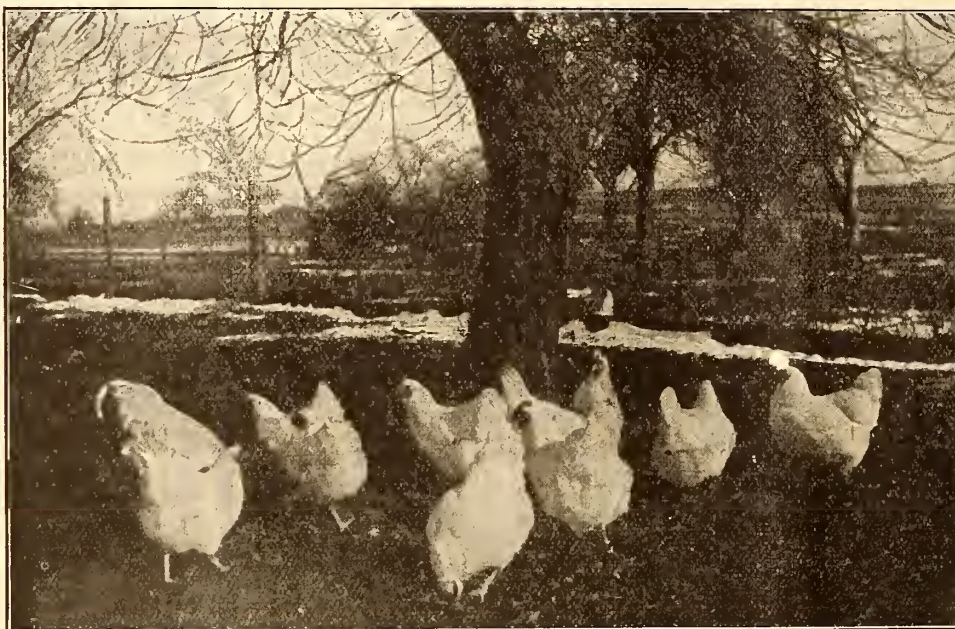

crawl in some shady place and sleep until called again. They have become weak physically, would stagger about toward the last and finally die. I plucked the feathers from one or two and dissected them and found the oil sack on the back much swollen and hard; when it was cut open the inside of it looked like the inside of the gizzard, but much finer.

Will you ask poultrymen the cause of this disease and what can be done to prevent it, and publish such information in your paper?

wards and seem nearly scared to death. All have died that have had it, except the last pullet. She has had it over two or three weeks. She seems better every morning the last week, but at night she always is worse again. Head all drawn up, twisted around under her. If she gets the least bit scared she can't walk a bit. I have about 175 pure bred pullets and cockerels and they nearly all have been affected with colds and roup. I can not get it stopped. I give roup cure to them in the water. They are in a house 10x20, two windows and door—no draft; but I leave the windows open. I feed whole wheat, crushed corn, corn meal made into dough and cooked scraps from the table, clabbered cheese, oyster shells, and mica grit. G. W. W.

Rairden, Wyo.

Answer.—You answer your own question when you say that all your stock has had the roup. You have evidently bred from these diseased birds and the result is that you have a flock of fowls that is absolutely worthless. This dis-

Breeding yard of White Plymouth Rocks bred and owned by J. A. Bickerdike, Millersville, Ill., as used in his yards the past season and from which he has young stock now for sale. These birds were mated to produce "winners and layers," the hens having a trap nest record of an average of 162 eggs each per year. All but two score above 92 (without conditioning); Judge Helmlich. If this isn't a combination of fancy and utility, what is it?

Standard of Perfection for further information.

Editor American Poultry Journal.

Dear Sir: I have been a subscriber to your paper for three years and have gotten some good advice from its columns, but now I am up against it and would like some special advice. I have three breeds of fowls and from February 1 until June 1 keep each breed separate, at other times all mingle together. I have handled chickens for fifteen years and have never experienced what many term "bad luck," but am now having it. I have the Rhode Island Reds, White Wyandottes and the Downey fowls; the latter a breed of my own. They have no feathers, but a down all over the body, hence cannot fly over a three foot fence. This summer the fowls have not done well. They stopped laying early in June and commenced to shed but many of them ceased to be active. They would come when called, eat well and then

I clean the droppings, nests and litter from my house about four times a year, spray two and sometimes three times with lime, coal oil and carbolic acid. This season I had some sulphate of copper solution handy and threw that in the mixture also. I also coal oil roosts at least once a month. E. J. R.

Katrine, N. Y.

Answer.—Will some of our readers who have had experience with disease of this character please answer E. J. R.?

Editor American Poultry Journal.

Dear Sir: As I am a reader of your paper will you kindly answer the following in your next issue of American Poultry Journal? I have had one or two pullets and two or three cockerels to die on me. When they were approached by other birds they would nearly always turn their heads over half way with wattles up, draw up their neck, or if the other chickens or even if I went to pick them up they would run back-

ease no doubt had its origin in your method of housing and caring for your fowls. You should dispose of your entire stock and thoroughly clean and disinfect your houses and yards and see that your houses are properly ventilated before putting your new stock into them. Compelling fowls to roost in poorly ventilated quarters will cause them to get into the condition you describe.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in your November number? (1) Will hens lay as well without the male bird? (2) Which would you advise me to keep this winter for egg production, pullets hatched in February which are now laying, or the one-year-old hens? (3) Which is the best feed for them in winter to produce eggs, the warm mash in the morning or the dry feed? Mrs. C. L.

Westbrook, Me.

Answer.—(1) Yes. (2) The pullets.

Merchandise from Sheriffs' and Receivers' Sales.

THE CHICAGO HOUSE WRECKING COMPANY saves you 30 to 50 per cent on staple merchandise from **Sheriffs' and Receivers' Sales**. Wrecking Prices have come to be known as bargain prices. Here you have the most wonderful bargain offering ever advertised. Such an opportunity seldom occurs. The very best manufactured articles offered at less than original cost of production. That's our merchandising method. We do not buy our goods in the regular way, but take advantage of various sales to secure bargains. **Our mammoth plant is the largest in the world devoted to the sale of general stocks.** Increasing business has necessitated an addition to our already enormous institution. Over 35 acres literally covered with merchandise of every description.

We built our enormous business by giving our Customers Absolute Satisfaction

LUMBER! LUMBER!

Send your lumber bill for our estimate. We offer the most wonderful opportunity to purchase **Lumber and Building Supplies**. We furnish absolutely everything necessary for construction purposes. We bought 50,000,000 feet of lumber and finishing material from Manufacturers' sales. We invite you to inspect our stock. We guarantee satisfaction. On application we will send you copies of letters from customers who have bought from us. **THEY SAVED MONEY; so can you.**

Beston Leather Couch, \$14.00

50 bought at Manufacturers' Sale; full continuous roll, diamond tufted top. Best quality hair filled over durable tow layer. Hand some hand-carved claw-foot frame. Retail value easily \$24.00.

Brass Trimmed Beds, \$6.40

Full-size, strongly built, exactly like illustration. Posts 1-16 in. diam., 67 inch high, trimmed with genuine brass, enameled in either white, red, green or black.

WE PURCHASED EVERY EXPOSITION.

This includes the World's Fairs of Chicago and St. Louis, the Expositions of Buffalo and Omaha, built at a cost of \$90,000,000. We are the foremost dismantlers and purchasers of large institutions in the World. By this means alone millions of dollars worth of the world's best products have passed into our possession and have been rebuilt and sold at 50 per cent below their original value.

The World's Bargain Center.

Thousands of satisfied customers everywhere have learned to recognize the virtue of our business. We stand between you and high prices. The greater part of our stock consists of absolutely brand new, first-class merchandise that we have secured in connection with our purchase of stocks at Sheriffs' and Receivers' Sales. Our enormous warehouses are overflowing with merchandise secured from such sources. Our wonderful growth and expansion is the best evidence of our ability to serve you. Merchandise of the highest quality is sold at sacrifice prices.

Our Guarantee.

We guarantee absolute satisfaction. A satisfied customer means more to us than a large sale. Every article you purchase from us is guaranteed absolutely as represented. If you find it to the contrary, we hold ourselves in readiness to make good our representations. If the goods received are not as represented, we will take them back.

We cheerfully invite investigation as to our responsibility. Our capital stock and surplus is over \$1,000,000. We refer you to any commercial institution in Chicago or anywhere else. Look us up in Dan's or Bradstreet's; ask any Express Company; write to the editor of this or any other paper; if you want any more positive proof, write to our depository, the Drover's Deposit National Bank, Chicago.

DOORS, 60c and up.

10,000 doors and windows, which we will close out at a saving of 40%. At 60 cents we can furnish you an ordinary door, good enough for general purposes. We have a complete list of these doors and windows, which we will mail on application.

Good Quality Linoleum, 38c yd.

Six carloads genuine linoleum bought at Receivers' Sale. Extra heavy; floral and tile patterns; 2 yards wide. Retail price, 45 to 60 cts. Send your order today, giving us size of room. Oil cloth, per sq. yd., 17.

RUGS, \$9.40

8-wire tapestry Brussels in variety of colors and designs, size 10 ft. 6 in. x 8 ft. 3 in. Beautiful medallion center, red with green and tan figures. Perfect harmony. Retail value, \$18.00 to \$25.

ENAMELED TUBS, \$6.00

Brand new steel tubs, with enamel baked on, 5 ft. long. Handsome white enameled, seamless cast-iron roll rim bathtubs. \$15.25. Low-down water closet outfits, 10.00. Beautiful marble washstands, 9.00.

\$11.00 HEATER \$6.50

200 like cut, bought at Sheriffs' Sale. Greatest fuel saver, best heater made. Ornamental, trimmed in nickel. Large, durable fire pot. New patent grate and large balled ashpan. Best quality casting. Body heavily reinforced. 12 in. \$6.50. 14 inch 9.00. 16 inch 15.00.

COMBINATION TOOLS, \$2.90

1,000 of these excellent tools. Here is a chance to buy a combination of an anvil, a vise, a drilling machine, cut-off, hardy and pipe machine, all in one, for \$2.90. Has no equal. The jaws of vise open 5 ins., face of jaws 3 ins. wide; wt., 30 lbs. Larger combination, \$3.25.

Enameled Kitchen Sinks, \$1.00

New blue enameled, 16x24, with nickel-plated strainer, enameled inside and outside, price, \$1.00. Cast-iron flat rim white porcelain enamel kitchen sinks, size 18x30, with nickel-plated strainer, \$1.75. Handsome high-back, one-piece, white enameled cast-iron seamless kitchen sinks, \$11.00.

(3) We prefer the dry grain, and for this there is nothing better than good sound wheat and oats, with a little whole corn at night in very cold weather.

Editor American Poultry Journal.

Dear Sir: Kindly answer in your next issue: (1) Is Kaffir corn an egg food or simply a fattening food? (2) About what should a B. P. Rock cockerel weigh at four months old? W. H.

Ocean Beach, Cuba.

Answer.—(1) Kaffir corn is very fattening unless mixed with other grains. (2) Three to four pounds.

Editor American Poultry Journal.

Dear Sir: Will you kindly tell me in your next issue which duck, the Pekin or Muscovy, is the best for market broilers and roasters? Which is the easiest to raise? Also which is the best, the Leghorns or Minorcas for layers and market combined? C. P. K.

Shavertown, Pa.

Answer.—The Pekin duck is conceded

to be the best for market purposes, and is probably easier to rear. We never say which is the best variety of chickens for any purpose. This is only determined by actual tests in the hands of the breeder.

Editor American Poultry Journal.

Dear Sir: Please answer me these questions: (1) Are there any single comb Silver Spangled Hamburgs? (2) Would it pay to keep them to sell eggs for hatching? I have R. C. Hamburgs and this year one cockerel and one pullet turn out to be single comb. J. L. K.

Bohemia, L. I., N. Y.

Answer.—(1) Not that we know of. (2) No.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your Question and Answer department: (1) What are the standard requirements for a White Wyandotte? (2) Does the standard require yellow legs in a hen or will straw color

do? (3) Some of my neighbors have been having a disease among their chickens but they don't know what it is. The feathers get loose, but nearly all die. them, and some act other ways and the on the roost with heads hanging down and some lay on the ground with wings spread out and head tucked back under chickens get sick suddenly and some sit. What is it, and is there a remedy?

Chrisney, Ind.

Mrs. D. L. J.

Answer.—(1) This information is contained in the American Standard of Perfection, which is a copyrighted book, and therefore, we are not permitted to copy the different standards and publish in these columns. Price of this book is \$1.50. (2) Yellow legs is the proper color for most varieties. (3) You are not explicit enough in your diagnosis of this disease; therefore, we would not venture to say what the trouble is or suggest a remedy for same. We would, however, suggest that you procure a copy of Dr. Salmon's "Diseases of Poultry," Price of which is only 50 cents. This book should be in the hands of every poultryman, as it will save many times its cost in one season.

Editor American Poultry Journal:

Dear Sir: Please answer in your next issue: (1) Is a hard black corn as large as a navy bean in the center of a chicken's foot an unusual occurrence? What is the remedy? (2) Are black feathers in the tail of a Buff Cochins rooster permissible? (3) Is the American Standard of Perfection published in book form? If so, what is the price, and where may it be procured? (4) Is it detrimental for breeding purposes to have only four hens with one large, strong and very vigorous Buff Cochins rooster?

Fairplay, Colo.

M. I. O.

Answer.—This is not unusual. The top should be pared off and the coin painted with iodine. (2) No. (3) The American Standard of Perfection is a book containing 300 pages. Price of which is \$1.50. For sale by American Poultry Journal Publishing Company, 105-113 South Clinton street, Chicago, Ill. (4) Not with this variety.

Editor American Poultry Journal.

Dear Sir: Answer the following in your next issue: (1) Is it best to have litter in a hen house? (2) What is the best feed for morning? (3) How many hens for one cockerel and have fertile eggs? D. B.

Newton Falls, Ohio.

Answer.—(1) There should always be plenty of litter in the hen house during the cold weather. (2) Whole wheat and oats scattered in deep litter. (3) From eight to twelve.

Editor American Poultry Journal:

Dear Sir: I have an old Silver Wyandotte hen with a big lump on the top of her head as large as a walnut. It has been there for over a year now and don't seem to hurt her. She appears in perfect health otherwise. In fact is one of my best layers. What do you call this? J. A. S.

Blue Island, Ill.

Answer.—This is no doubt due to an injury, and this being the case, does not affect her laying qualities.

Editor American Poultry Journal:

Dear Sir: Will you please answer these questions in your next issue? (1) I raise Cornish Indians. I have a heavy-

\$17 A HEN PER YEAR \$17

WAS THE PROFIT MADE, AND PROVED, BY ONE OF OUR SUBSCRIBERS.

HOW IT WAS DONE will be plainly told by that subscriber, in a series of articles that will appear in our columns only. **YOU** can make more money from poultry; any one can make a profit of \$2 a hen up, who reads **POULTRY HERALD**, edited by the former successful manager of the world's greatest poultry farm and contributed to by many of America's most successful poultry keepers and best known judges. Each issue is full of what you want to know in that month (not six months before or after), including several finely illustrated, profit-increasing leading articles; many instructive short articles; editorials on live topics; Turkey Department; Ducks and Geese Department; Questions Answered Department (Subscriber's questions answered correctly, free); Clubs and Associations; Show Dates, etc., etc. If you are interested in poultry, for market or exhibition, subscribe for the up-to-date, reliable Poultry Herald; published 19 years, monthly, 50c a year, stops when out.

POULTRY BOOKS FREE--YOUR CHOICE.

With each subscription, at the regular price of the Herald alone, we will give one of the following books, full to the covers of new, reliable, money-making instruction, free, postpaid.

POULTRY MANUAL, a Complete Guide To Success With Poultry—168 pages, illustrated; all about leading standard breeds, breeding show winners (written and illustrated by F. L. Sewell, world's greatest poultry artist and noted authority), value of different feeds, best methods of feeding, how to make farm poultry pay, cure diseases, etc. Price, 25 cents, postpaid.

POULTRY HOUSES, Coops and Equipment—100 pages, 90 illustrations; how to build best and cheapest large and small houses, roosting and brood coops, all fixtures and utensils; how to make the best foundations, floors, walls, roofs, nests, ventilators, show coops, shipping coops, drinking fountains, etc. Price, 25 cents, postpaid.

EGG MONEY, How To Increase It—128 pages, illustrated; breeding, rearing, housing and feeding layers, to get eggs when the price is high; marketing to obtain better prices; descriptions of successful egg farms, etc. Price, 25 cents, postpaid.

CHICKS, Hatching and Rearing—128 pages, illustrated; how to build an incubator house; hatch and rear with incubators and brooders and with hens; care of the growing stock; developing, fattening and marketing; the broiler business; the profitable "soft roaster" industry, etc. Price, 25 cents, postpaid. Address,

POULTRY HERALD, Dept. C., ST. PAUL, MINN.

laying hen that does not moult properly, and she stands around drawn up and appears to be asleep. She is almost blind. She cannot see enough to eat but you can pick her up any place without being seen. She has almost quit laying now, but sings a great deal. I feed corn and wheat, and have only about twenty chickens on one lot. Can she be cured? (2) Some of my chickens, mostly young stock, are getting sick. Their droppings is almost entirely white, and when they develop marked symptoms, the droppings become thin and watery. In advanced stages it is partly yellow. A short time after being dropped it becomes quite hard, much like lime. The affected ones eat somewhat at first, but later on eat nothing and just droop around, laying down sometimes. There is very little, if any, vermin on them. (3) On account of so few feathers on games, is it not better to keep them in close and warm houses than to keep them in open front houses? (4) What chicken is the tallest? Is the Malay taller than the Brahma? (5) Can you give me the name of a breeder of Black-breasted Red Malays? C. W. B.

Table Rock, Neb.

Answer.—(1) There is probably no cure for her. However, a little tonic of some kind would do no harm and might be of benefit to her. (2) This is liver trouble and is due to improper feed. You should change their diet frequently and feed more green food and also give them a plentiful supply of good sharp grit. Also feed pulverized charcoal in the soft feed. A little Douglas mixture in the drinking water will also be of benefit to them. (3) A good warm house properly ventilated will be all right for Games, or any other variety. (4) We believe the Black Langshan is the tallest, but the Malay is taller than the Brahma. (5) Refer you to the Game Fanciers' Journal, Battle Creek, Mich.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue: How many B. P. Rocks would you advise to keep in a house 10x12?

Telocaset, Ore. R. H.

Answer.—Twelve to fifteen.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in the next issue of your valuable paper: (1) I have lost a number of young chicks this summer. They would go around with wings drooping and feathers all fluffed up (they would be all right until about two months old), and would eat up to the last, and afterwards would die with their legs pulled up close to their bodies. I feed a good chick feed until they are about five weeks old, then I give them a warm mash in the morning with a little Dr. Hess Panacea in it. And the next two meals I feed a good poultry scratch feed. They have a good dry house to sleep in and a large run, and oyster shell and grit, and fresh water always before them. (2) What is the cause of chickens growing with crooked backs and tails? I have killed a number and found them this way. The door of the coop is large and always open and they do not have to go through a small opening. Please tell me the cause of this and if possible a remedy for it. F. C.

Wheeling, W. Va.

Answer.—(1) Lice is the cause of your chicks dying. Lice is the cause of

at least 75 per cent of the loss in little chicks every season. A little extra care and attention at hatching time and the first few weeks thereafter would prevent a good percentage of this loss. (2) This is caused by overcrowding when the chicks are young. These deformities are practically unknown where little chicks are not raised together in large numbers. Do not try to raise 100 chicks in a brooder that is only large enough for twenty-five.

Editor American Poultry Journal.

Dear Sir: Kindly answer the following questions in your next issue: (1) What breed would you recommend me for market purpose—a Light Brahma, a Cochin or a Langshan? For eggs I have already the Buff Leghorns, and an Asiatic breed combined with them, will, I think, answer as well as a Plymouth or a Wyandotte breed. (2) Is it true that a Wyandotte, although a pound lighter, gives as much meat as a Ply-

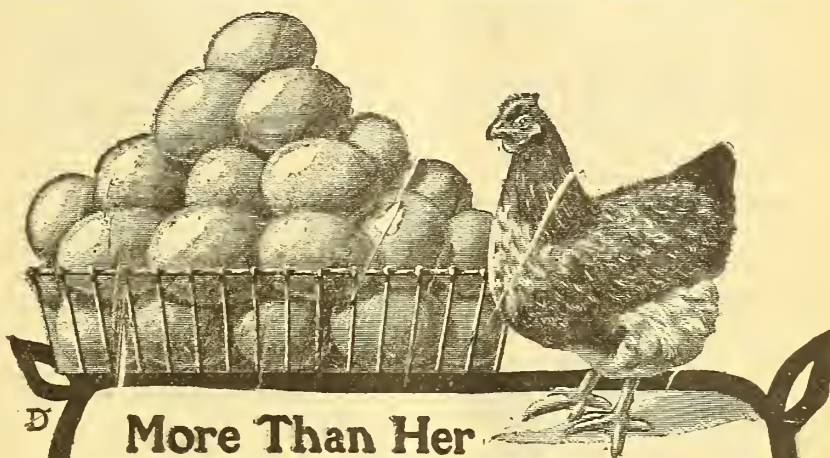

mouth Rock, on account of its plumpness? (3) How is a R. C. Black Minorca as a general purpose fowl. It seems to me a Black Minorca is just as heavy as a Wyandotte, and as good layer as a Leghorn. Where must we look for his drawback? A. L.

Philadelphia, Pa.

Answer.—We cannot, in these columns, recommend one breed above another for any purpose. We would, however, suggest some one of the American varieties for market purposes. (2) This is so claimed by the breeders of Wyandottes; but, in our opinion, there is not much to choose between the two; they are both good table fowls. (3) There is nothing to be said against the Black Minorca, as they are an excellent variety of fowl.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions in the next issue: (1) Is millet seed good for young chicks? (2) What is good for young chicks that

More Than Her Own Weight in Eggs Every Month

Such big egg production can only be had when the hen is in good condition—strong, healthy and properly fed. To insure a willingness to lay regularly, you must supply the proper feed but more than enough to just sustain life. The yield of eggs from a hen properly and sufficiently fed is only limited by the capabilities of the individual bird, *but in order to reach that limit*, whatever it may be, use

CORNO HEN FEED

It has been proven to contain the proper variety of grain, containing sufficient nitrogenous matter, and if fed in conjunction with the usual grit will insure the best results at all times. We don't ask you to buy "Corno Hen Feed" on faith, we want you to see it—then you'll buy it.

WE WANT TO PUT A SAMPLE

right into your own hands so that you can examine it—see how clean it is—and note the goodness of the grain it's made of.

All you have to do to get this sample is to drop us a postal giving us your name and address and that of your dealer.

If your dealer doesn't sell Corno Hen Feed, we will quote a price on any quantity delivered at your nearest railroad station.

THE CORNO MILLS COMPANY

900 Baugh Avenue East St. Louis, Ill.

PILLING CAPON TOOLS

On the market capons bring double price and are cheaper and easier to raise. Caponizing is easy and soon learned. A Pilling Capon Set will enable you to caponize all your young cockerels and add greatly to your profits. Sent prepaid with "easy to use" directions, on receipt of \$2.50. Anyone can do it. Write for free book on caponizing.

have slight colds? (3) Do the Leghorns winter as good as the Barred Plymouth Rocks?

A. S.
Pennington, N. J.

Answer: (1) Millet seed is good for little chicks when mixed with a variety of other small grains. (2) Any of the various cold and roup remedies advertised in these columns. (3) Yes, if properly housed at night to prevent freezing of the combs.

Editor American Poultry Journal.

Dear Sir: Some of the subscribers ask "What is meant by line breeding?" I am going into the poultry business, and will keep White Rocks exclusively, so will you kindly tell me where I can get a book that tells all about line breeding?

Buckley, Wash. J. F.

Answer.—Line breeding is breeding in line year after year without the introduction of blood from a different strain. We do not know of any book that will give you this information. We publish articles from time to time in these columns on this subject.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your Questions and Answers department of next issue: (1) How many Barred Plymouth Rocks could I keep in a run 75x50 feet, and what size house should I have to house them at night? (2) Would you advise me to raise Barred Plymouth Rocks? (3) What is a good remedy for sore head?

Paris, Tex. A. D.

Answer.—(1) Fifty to sixty. House should be at least 14x28. (2) We never advise any one what variety to raise. (3) A thorough washing with warm, soapy water, after which apply sulphur or carbolic ointment.

Editor American Poultry Journal.

Dear Sir: Will nux vomica fed to chickens four or five days in succession

kill blood-sucking parasites on them? If so, why is it not more generally used? Is it not a good tonic for chickens?

Austin, Tex. Dr. J. S.

Answer.—We have never heard of nux vomica being given to chickens to kill vermin. It is sometimes given as a tonic in certain diseases.

Editor American Poultry Journal.

Dear Sir: In your columns please answer: (1) What firm makes or handles

Double the EGG Production

of your hens by feeding them green cut bone. But it must be cut bone, not splintered. The one bone cutter which mills the bone—actually cuts it into particles suitable for all sizes of fowls is the

THROW PEARL TO POULTRY

They'll make a lively scramble. They'll scratch and hunt for it in the litter because they like "the flavor" and the sharp, square corners. It beats gravel and oyster-shell, and serves the double purpose of a grit and shell-maker. It's easy for hens to see it, because it's white and reflects the light. Then it's clean; you don't have to pay for a lot of useless trash—you get just "grit." It's hard, and holds its sharp edges and grinding points till at last dissolved in the hen's or chick's gizzard. Three sizes for chicks and hens. It contains Lime, Magnesia, Silica, Sulphur, Iron, Alumina—all necessary to balance the food ration. These go to help make bones, feathers, yolk and shell. So, if you would have your fowls vigorous, bright-eyed, strong in legs and eggs—throw Pearl to them and ex-

the Hero bone cutter? (2) How much cut bone per week for twelve hens and how often? (3) Can you describe the operation for crop bound? F. H. E. Kalamazoo, Mich.

Answer.—(1) We do not know. (2) About two ounces per hen (three times per week. (3) This would occupy too much space for this department. This is fully described in Dr. Salmon's book, "Diseases of Poultry." Price, 50c. For sale by American Poultry Journal.

SPECIAL POULTRY COURSE AT THE PENNSYLVANIA STATE COLLEGE.

Last year the Pennsylvania State College instituted a special course of twelve weeks in Poultry Keeping. The next session will open December 3, 1907. Mr. J. W. Clark, Gainesville, Ontario, has been selected to give special instruction in this subject. Mr. Clark is one of the largest poultry raisers in the province. He has been engaged in the business for ten years and has won the leading prizes in live as well as dressed poultry in both Canada and New York. He not only raises high-class show stock, but devotes considerable attention to utility stock as well. He has judged at the leading shows being sent out each year by the Ontario and Dominion governments. He has had several years' experience on the Ontario Institute staff lecturing on "Poultry Husbandry."

Instruction in this course consists of lectures on "General Principles of Breeding and Feeding;" "The Breeds of Poultry—Their Origin, Characteristics, Care and Management," and "Diseases and Parasites." Practical exercises will be given in dressing poultry, caponizing, keeping records, judging, running incubators and brooders, and in the construction of colony houses and other poultry appliances. The course will be under the direction of Prof. T. I. Mairs, to whom inquiries may be addressed for detailed information.

BONE AS A RATION BALANCER.

Among animal feeders we hear much of a balanced ration. The common run of farm stuff does not balance properly. That is, there is too much of the fat element, and animals grow fat at the expense of growth and strength. On the other hand, there may be an excess of the nitrogenous elements, which make a very poor fattening feed where fattening is the object to be obtained.

After all, a "balanced" ration is a relative term and depends on what you are feeding for. We have the same questions to deal with in poultry raising. When we feed for the market or show, we want an abundance of the fat producing food. When we feed for egg making, we must have the protein elements—the lean meat foods or the fresh, green, raw bones of animals. The reasons are plain. Feed fats and you get fats. You must feed nitrogenous or protein elements if you want to force egg laying, because the egg itself is largely protein. As the farmer prefers timothy or upland hay for his horse because it gives muscle and bone and strength instead of fat, so the poultry raiser supplies fresh bone to his fowls when he wants eggs. Bone is pretty nearly the ideal feed for egg making. Other feeds sustain the fowl. The bone supplies the egg making material and the whole ration is balanced for a definite purpose.

WE WANT NAMES

We want you to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you TWO BEAUTIFUL PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of THE HOME MONTHLY (The National Poultry Journal) to a lot of poultry raisers who are not now taking our paper, and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES. Address

ILLINOIS STATE FAIR.

The Illinois State Fair was the largest we have attended this season. The poultry building was taxed to its utmost capacity, and a large tent had to be placed in commission. There were 6,000 entries of first-class birds and D. T. Heimlich, of Jacksonville, placed the awards. The grand success of this fair is due to the hard and persistent work of the secretary, Edward E. McCoy, who has been connected with the management for the past 18 years and the only complaint we have to make is that he did not build an addition to the poultry building last year, which is absolutely necessary to take care of the exhibits. Mr. C. E. Blodgett, of Downers Grove, was superintendent of the poultry department, a position he has held for the past 20 years.

Here are a few of the winners. Klein & Anderson, Macomb, Ill., won several blue ribbons on Barred Rocks. The White Plymouth Rocks were the talk of the show. J. A. Bickerdike, Millersville, Ill., carried off most of the blue ribbons and several 2d and specials. Mrs. Martha Fike, Libertyville, won out on cockerel—

one of the best shaped birds in the show. The White Wyandotte class was a good one, in fact, the largest entry of one variety. H. H. Fike, Libertyville, Ill., won three blue ribbons and some seconds. The first pullet Mr. Fike showed was a grand specimen, a true Wyandotte shape and pure white plumage, Geo. L. Rudy, Mattoon, Ill., won 1st cock. J. C. Ritter & Son, Olney, Ill., won three first, one second, and three thirds on Buff Wyandottes; 106 birds competing. Their display was a good one, the birds being of even shade of golden buff and good, short blocky Wyandotte shape. Their first pullet was conceded to be one of the best shaped Wyandottes in the whole show.

Most prominent visitors at the show were: Fred A. Busse, Mayor of Chicago, Wm. Miller, Bischleben, Germany, Insurance Commissioner of the German Empire. He said it was the greatest show he ever saw. Mrs. Arthur Seymour, Murrayville, Ill., H. B. Wittenberg, St. Louis, Mo., Miss Bessie Hallock, sister of Ross C. H. Hallock, secretary of A. P. A., St. Louis, Mo., Mr. and Mrs. Dudley Walker, Riverside, Ill., Mr. and Mrs. W. E. Stanfield, Chicago, Wm. Miller, of White

Rock fame, Crescent, Mo., Dr. Rohrbach, San Jose, Ill. G. W. Heyl, Washington, Ill., Geo. Rudy, Mattoon, Ill., Fred J. Phillips, Chicago, Mr. and Mrs. Herman Meyers, Chicago, Mr. and Mrs. Carney, Charleston, Ill., Manverse & Rasch, Trenton, Ill., Mr. and Mrs. B. S. Hume, French Village, Ill.

TENNESSEE STATE FAIR.

The greatest fair of the South, the Tennessee State Fair, was an event never equalled by a show of its size in the country. The poultry show was crowded every day, from morning until night. The quality of stock was the finest we have seen this year, especially in the Rhode Island Red and White Wyandotte classes. The White Plymouth Rock breeders turned out in full force, H. E. Mattox winning most ribbons on this popular breed. J. H. Winkler carried off four ribbons including that of first cockerel. Frank Langford, Nashville, Tenn., made almost a clean sweep in Rhode Island Reds, namely, four first, including the most coveted prize of first cockerel, and we doubt if there is a bird that can defeat him. Mr. Langford refused \$100 for this bird. We are in hopes that he will show him at Madison Square Garden. Mr. Langford has made a success with poultry, due principally to honest dealing and his able assistant, Mrs. Langford. Fount H. Rion, Nashville, Tenn., who was showing a fine string of White Wyandottes, carried off some of the blue ribbons. His first cockerel being pure white with perfect head, something we rarely see. His first and third pullets were beauties, true Wyandotte shape and pure white, there was not much choice between the two birds. His older birds were not through the moult or he would have been in the money. O. A. Bogardus, Warsaw, Ky., showed a fine string of Black Orpingtons, winning five ribbons.

The most prominent visitors were: Mr. and Mrs. U. R. Fishel, Hope, Ind., who was spending most of his time in White Rock Alley, Theo. Hewes, Indianapolis, Ind., was very busy making "slates" for the next A. P. A. election. Theodore was formerly a politician in Missouri. Loring Brown, Smyrna, Ga., Reed Parish, Tenn., F. J. Marshall, At-

MISSOURI STATE FAIR.

The management of the Missouri State Fair recognizes the poultry department is one of importance to its people. This show was presided over by J. A. Maxwell, of Fayette, ably assisted by Mrs. Maxwell. The awards were placed by D. T. Heinlich, of Jacksonville, Ill., a judge of national reputation, and C. A. Emery, of Carthage, Mo., noted as one of the best judges and also a good entertainer in telling stories. The awards were all made by Tuesday morning, which was gratifying to the exhibitors and visitors. Missouri, no doubt, stands at the head in its showing of poultry production of the states. The last census report shows \$40,000,000 worth shipped to market. There were about 2,000 entries, nearly every class of standard poultry was represented.

The White Wyandottes of Clement & Fike, Libertyville, Ill., were the talk of the show, winning all first and three seconds; 102 birds in competition. The Buff Plymouth Rock exhibit by W. S. Robison, of Fayette, Mo., would have been a credit to any show in the United States; he won all first and three seconds, which also entitles him to a duplicate of winnings on the Missouri specials. F. W. Niesman, of Freeport, Ill., was there with a carload of different varieties of poultry, winning over 200 blue ribbons. One of the most attractive exhibits was that of Mr. Kellerstrass, of Kansas City, showing several varieties of Pheasants and White Orpingtons. These Orpingtons are bred from Crystal Palace winners and are pure white—something we rarely see in White Orpingtons. His winnings were 1st cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d pullet, 1st and 2d pen; certainly a clean sweep. The most prominent visitors at the show were Senator Stone, of Missouri, C. A. Morton, St. Louis, C. A. Branch, Pleasant Hill, Mr. and Mrs. W. S. Robison, Fayette, Mo., H. H. Fike, Libertyville, Ill., J. Quisenberry, Slater, Mo., Secretary State Poultry Show, H. Turner, Mexico, Mo. and Mr. and Mrs. Kellerstrass, Kansas City, Mo.

SPRINGFIELD, MASS.

Springfield, Mass., will be the best show town in New England outside of Boston and a winning at Springfield will be well worth advertising. Never in the history of poultry organizations in this city has enthusiasm and determination to hold a poultry show been as pronounced as this year.

The officers of the Springfield Fanciers' Club, having had much experience in handling successful poultry shows, started in early to make arrangements for their show. The premium list will be ready for mailing by the time this is read, and all interested in the Springfield show should send for a copy. A careful perusal of the same will convince any fair-minded reader that we

Don't You Want More Eggs?

Try our way
FREE

"Her Egg Basket Is Always Filled"

YOUR hens can't lay eggs in abundance, unless they have egg-making food, in abundance. That's true because every atom they use in making eggs must come from the food they eat. It stands to reason then, that for the best results you must feed foods rich in egg-making materials. What are they? Let us see—

Nature knew what she was about when she made Cock, Hen and Chick relish a nice, juicy worm or a good, fat bug above everything else.

They relish such food, because it is rich in what the professors call "protein"—and protein is what fowls need, not only to make eggs, but also to make bone, muscle, flesh and feathers, as well as to maintain vigor and vitality.

That is why the hen craves bugs and worms—or some such food rich in protein.

It's a natural instinct for that something which builds up eggs and maintains good conditions.

Now, animal matter or foods, are rich in protein, while only limited quantities are found in the grains and vegetables usually fed.

But hens don't get worms and bugs in winter nor when yarded.

Therefore you must provide something to take its place if you expect to get the best results from your flock.

What is that "something?"

The best thing yet discovered is raw, green bone—the fresh trimmings from the meat market—bones with meat and gristle adhering—fresh cut and uncooked.

Analysis shows that such raw bones and gristle—beef, pork or lamb—contain the same food elements as the bugs and worms.

They therefore make a perfect substitute—not something "almost as good," but identically the same. A food rich in protein, and which costs but little more than the labor of cutting it.

It contains more than four times the protein and egg-making materials of grain, and is rich in all the elements that go to make eggs, bone, flesh and feathers.

That is why it makes hens lay as

nothing else will;—Why it improves the vitality of the entire flock;—Why it makes red combs, bright eyes and glossy plumage,—Why it enables your flock to produce more fertile eggs, larger hatches and stronger, livelier chicks.

Why it promotes growth and development, giving you earlier broilers, earlier layers, and larger market fowls;—Why it more than doubles your poultry profits.

It is cheapest because it is richest in the food elements fowls most need, and because it costs you but little more than the labor of cutting it. It is the best because it contains these elements in their most digestible form, and you know exactly what you are feeding—as you cannot know when you use

so called "beef scraps" or the ready-mixed commercial foods, or the advertised "poultry foods" made from secret formulae, for which such extravagant claims are made. You have to buy them "on faith;" you don't know what they contain.

Fresh, raw bone is greatly superior to "beef scraps," because the cooking and embalming and preserving and drying of the scraps destroy nearly all their value.

Experiment stations and thousands of poultrymen have proved the value of green bone. Can you afford to ignore such valuable food?

The best machine for preparing green bone is

Mann's (Latest Model) Bone Cutter

Mann's turns easily and rapidly, cutting all green bone with all adhering meat and gristle, never clogging; never leaving chunks or slivers, wasting nothing.

Its self-governing feed automatically adapts the cutting to your strength, so that any one can use it.

Its open, hinged cylinder is easily cleaned and takes in large bones.

It is strong, durable and requires few repairs. We want you to try one.

10 Days Free Trial

Our Free Trial Offer

No Money In Advance

No money in advance—no deposit—no red tape.

We send you a Mann's on your promise to give it a fair test.

Try one and see how good it is.

To prove to you that it is all we claim it to be, we will send you any bone cutter you may select from our catalogue, on 10 Days Free Trial—no money in advance. Just select the machine you want to try. We will ship it to you. If satisfied after the trial, buy it. If not, return it at our expense. Send For Catalogue To-day and make your selection.

F. W. MANN CO.,

Box 56,

Millford, Mass.

mean business and that the inducements we offer in the shape of prizes cannot fail to bring out a large entry.

Our hall is in the very best location in the city and the light in the same is such that judges will have no excuse for calling a brassy bird white, or a smutty or metallic barring the proper color for Barred Rocks. This can be accomplished only with plain glass windows, with which this hall is well supplied.

Our judges are a guarantee that the work will be well done and no favoritism shown.

As this will be a comparison show, we expect all judging to be done the first day and ribbons up, which gives the exhibitor ample time to receive the benefit of his winnings.

The White Wyandottes are especially favored in having the \$100 offered by the National White Wyandotte Club to

be competed for at our show. There will be a state meeting of this club during the show. Other valuable prizes will be offered on this breed. The Barred Rocks will be one of the banner classes, as the \$25 state cup of the American Plymouth Rock Club will be competed for by club members on best cock, hen, cockerel and pullet.

The state meeting will be held at our show. Two more valuable cups and large cash prizes will be ready for the winners on this breed. White and Buff Rocks, Single and Rose Comb Rhode Island Reds, Buff and Columbian Wyandottes, White and Brown Leghorns and Buff Orpingtons are especially well favored with cups and cash specials.

Remember, our dates are December 3 to 6, and entries will close November 25. Our secretary is well known in the United States and Canada as a breeder, exhibitor and judge at the largest shows in the country, and you may be sure that fair treatment will be offered you with your exhibits. Send for premium list to W. R. Graves, Secretary, Springfield, Mass.

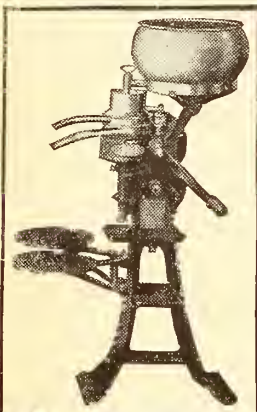

MISSOURI STATE POULTRY SHOW.

The greatest show and institute ever held in Central United States will be held at Sedalia, Mo., December 10-15, 1907. The Missouri State Show pays the largest cash premiums paid at any show in the United States this year. On pens, \$10, \$5 and \$2.50. On single entries, \$5, \$3 and \$1.50. Four of America's best judges. Five thousand dollars in the treasury at the opening of the show to guarantee the payment of every obligation. An interesting feature will be the institute, free to those interested in raising poultry. Some of the leading poultry experts of this country will make demonstrations and lecture on practical poultry topics. Every poultryman in this section of the United States should attend this institute and exhibit a few birds at this great show. A prize won here will be a valuable advertisement and greatly increase your sales. We mean business. We want your birds. A square deal guaranteed every exhibitor from start to finish. A large list of specials is also offered. Several incubators, silver cups galore, \$10 to \$25 cockerels and eggs from the pens of America's foremost fanciers, gold and silver medals, club cups and specials, ribbons and badges and many other valuable prizes. Two pairs of very fine birds, valued at \$50, given away absolutely free the last day of the show. Attend the show if possible and if not send your birds and they will be given the most careful attention. Write for a catalogue. T. E. Quisenberry, secretary, Slater, Mo.

LA CROSSE, WIS.

Western Wisconsin is one of the best sections for poultry in the north-west and at the annual exhibition of the Western Wisconsin Poultry Association to be held at La Crosse, Wis., December 11-16, 1907, fanciers will have an opportunity of becoming acquainted and advertise their stock. The judging will be done by James A. Tucker, of Concord, Mich., whose score card at a December show is worth its weight in gold. Many of the birds that are shown here will be exhibited at larger shows later in the season.

No association pays larger cash

DE LAVAL

THE WORLD'S RECORD CREAM SEPARATOR

Considered from "every point of the compass," so to speak, DE LAVAL Separators are truly "World's Record Machines." In original inventions, in skimming efficiency, and important improvements, in durability and ease and economy of operation, as well as in widespread usage and number of sales, the DE LAVAL has no competitor, or one that even approaches its record on any one of these points. The DE LAVAL was the original cream separator and by such all-important inventions as the "Alpha-Disc" system and "Split-Wing" device it has always led and is today from five to ten years ahead of all other machines. In close skimming, durability and ease of operation it shows an unbroken victorious record covering more than twenty-eight years. Thousands of tests have proven that it will save from \$3 to \$5 per cow each year of use over other separators. Nearly 900,000 machines have been sold to date and are used in every country, being distributed by more than 10,000 DE LAVAL branch houses and agencies in different parts of the world. Over 98 per cent of the world's creameries use only DE LAVAL machines, also all government and state experiment stations and every dairyman who has had real separator experience. The latest DE LAVAL models are ideal in every respect and represent the experience of over a quarter of a century in building separators. Send for new July, 1907, catalogue of the "World's Record" Separator.

The \$ Exhibition Coop

Neat, durable and complete. A coop that folds up; standard size, 24x24x27 ins.; one-half inch round rods; painted light blue. This coop is strong and durable, and carefully machined out of light, sound lumber. The front and back are made up; shipped flat; and furnished complete with clean-out drawer, canvas, nails, tacks, etc. Anyone can set it up in a few minutes, and it makes the most attractive coop that can be had. Order direct from this ad. \$1.00 each.

SPECIAL OFFER We will pay the freight (within 500 miles) on 12 coops or more. Club with other members of your Association and thus save the freight and have uniform cooping at the lowest possible cost. Other sizes and styles for Associations. Circulars free.

The Gem Incubator Co., Box B, Trotwood, Ohio

prizes than this one, considering the amount of the entry fee. It is the aim of this association to make the La Crosse show one of the largest in the Northwest, and for that reason everything will be done to make it attract breeders with their birds. Besides the regular cash premiums, cash specials in gold will be offered on all classes, thus making this one of the best shows in the Northwest for the exhibitors. All who show their birds at this exhibition will be given the most courteous treatment and everyone is invited to attend and meet with one of the best bunch of fanciers in the United States. For further information and premium list address E. H. Hoffman, Secretary, La Crosse, Wis.

BUFFALO, N. Y.

The Buffalo Poultry, Pigeon and Pet Stock Association was incorporated February, 1907, with a capital stock of \$3,000, divided into 600 shares at \$5 each. After the facts were made known to the local and nearby fanciers, the stock was rapidly subscribed for and the association put in running order without much delay. The following officers were elected for the first year: Dr. George L. Leitze, president; J. Thomas Harp, vice-president; Dr. Stanley A. Merkley, treasurer; Austin H. Aykroyd, secretary and Howard J. Young, corresponding secretary. The board of directors consists of the following business and professional men: Peter Mesner, Dr. Stanley A. Merkley, J. Thomas Harp, Charles V. Busch, G. M. Soverhill, Edward F. Greth, J. M.

Strauss, Godfrey J. Fellner, Dr. George L. Leitze, Austin H. Aykroyd and P. A. Landel. The dates of our first annual show are December 16, 17, 18 and 19, 1907, at Convention Hall.

Mr. J. Y. Bicknell will superintend the poultry. His name alone should assure satisfaction to all parties concerned. Mr. Charles E. Lang will act as superintendent of pigeons and pet stock. Messrs. George O. Brown, of Baltimore; Wm. Barber, of Toronto, and William F. Brace, of Victor, N. Y., will judge the poultry. The pigeons and pet stock will be judged by K. J. Muir, of Chicago; Harry D. Kirkover and Charles E. Lang, of Buffalo, and Henry Smith, of Syracuse.

Buffalo offers a great many opportunities both from a commercial and fancy standpoint, being a center of population, and well situated on the Great

Lakes with Canada our immediate neighbor, a large daily attendance is assured. Excluding Madison Square Garden, Convention Hall is one of the largest show halls in the country. Present indications are for a large entry. Floor space is being eagerly taken up by the manufacturers and everything points to a successful show. We are in the field to stay. For premium list and information address Howard J. Young, corresponding secretary, 406 Brisbane building, Buffalo, N. Y.

SEDALIA, MO.

The Missouri State Poultry Association will hold their annual show Dec. 10-14, 1907, and this show will no doubt be the banner show in this section of the country. The Missouri legislature last winter made a biennial appropri-

If You Want More Eggs

If you want to get eggs more fertile,
If you want to get bigger hatches,
If you want to get stronger chicks,
If you want to get heavier fowls,
If you want to cut down your feed bills,
If you want to *double your poultry profits.*

ation of \$4,000 for the use of the state association. Governor Folk recently appointed the state poultry board as follows: Frank Temple, Elsberry; R. B. Bridgeman, Oregon; C. A. Morton, St. Louis; J. A. Maxwell, Fayette; A. B. Drescher, Hannibal; S. J. Tetley, Farmington, and W. H. Turner, Mexico. The board met in the governor's office in Jefferson City July 1, and organized by electing R. B. Bridgeman, president; C. A. Morton, vice-president; T. E.

Quisenberry, Slater, secretary; W. P. Dulauey, Slater, treasurer. The board decided to offer the largest premiums offered by any show in the United States, equaling Madison Square Garden. On pens—1st, \$10; 2d, \$5; 3d, \$2.50. On single entries—1st, 5; 2d, \$3; 3d, \$1.50. Made J. A. Heather, Huntsville, superintendent, a man who has had considerable experience in handling shows. The board is planning to hold institute work in connection with the

show, and will likely have Tom McGrew, of Washington, D. C., Charles A. Cyphers and men of like prominence to deliver lectures on the different phases of practical poultry culture. Also arranging to hold institute work in various parts of the state to educate the people along practical poultry lines. The state association offers a \$10 silver cup to any local or county association in the state, to be offered at their local show in any way they wish to offer it, to any association that will send in 20 members to the state association at a membership fee of 50 cents each. The board is now selecting district vice-presidents in every section of the state to act as representatives of the state board in that section and to look after the needs of the poultry interests in their respective districts. Rhodes, Russell and Emery have been selected as judges, and a prize won at the Missouri state show at Mexico this year will be worth something to the exhibitor. We invite the poultrymen of our neighboring states to come and compete with us. Missouri State Poultry Board, T. E. Quisenberry, secretary.

WOONSOCKET, R. I.

The third annual exhibition of the Woonsocket Poultry Association will be held in Woonsocket, R. I., December 11-14, 1907. Judges are A. C. Smith on Barred Rocks and Leghorns, W. B. Atherton on White and Buff Rocks, Wyandottes and Rhode Island Reds, H. S. Ball on Brahmas, Cochins, etc., and W. H. Congdon on game and ornamental bantams. Additional judges may be added if necessary. This, as usual, will be a comparison show, and we shall show our usual liberality in the matter of premiums, paying \$2.50 first and \$1 second, with an entry fee of 75 cents, four to fill a class. Besides this we shall have a good list of \$5 gold specials for best cock, hen, cockerel and pullet in the different varieties and a goodly number of silver cups. Our treasury is in particularly good condition and we shall be prepared to pay our premiums with the same promptness as in the past.

E. W. Cook, Secretary.

VIRGINIA STATE POULTRY SHOW.

The annual poultry and pet stock show of the Virginia Poultry Association will be held in Richmond December 5 to 11, inclusive. Numerous special prizes are offered, and the shows annually held by the association have all proven satisfactory to the exhibitors. They have never failed to pay out premiums in full, and the attendance is great. Prizes won at Richmond, which is undoubtedly the leading show of the South, prove a very good advertising card. Premium list will soon be ready, and can be obtained by addressing the secretary, F. S. Bullington, Box 328, Richmond, Va.

OCONOMOWOC, WIS.

The Oconomowoc Poultry and Pet Stock Association will give its third annual show Dec. 11-16. This is one of the most progressive shows in the state. None can compare with it in quality of birds exhibited. Here is a fine place to try out your birds for the large shows. Frank L. Shaw will place awards, and all will get a square deal.

No-Tar Roofing

Defies Time, Water, Sparks, Cinders, Wind

"No-Tar" Roofing has a surface as hard as flint—it is flint! Can't catch fire from sparks or cinders. It's as flexible as rubber—and absolutely waterproof. It's tougher than leather. Costs less and lasts longer than shingles, iron or steel. Won't run in the hot sun. The building that has a "No-Tar" Roof protection will last longest.

Accepted by all Fire Insurance Companies, who charge 25 per cent less for insuring buildings protected by "No-Tar" Roofing than for buildings with shingle roofs.

For Store Buildings and Factories "No-Tar" Roofing is far more durable and satisfactory for flat or steep roofs than tin or gravel roofing. Will not rot, rust or run.

For Barns and Outbuildings "No-Tar" Roofing is made of sorts of buildings. Nothing better or cheaper for adding houses, outbuildings, etc. All joints water tight. "No-Tar" Roofing keeps stock and poultry snug, safe and warm in coldest weather. Quick and easy to lay. Exceedingly popular among farmers, stock raisers and poultrymen.

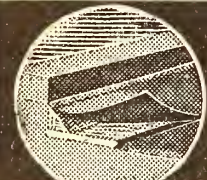

For Houses "No-Tar" Roofing will add immensely to the appearance of your residence. Use it on your new house or cover the old, leaky shingle roof with "No-Tar" Roofing and avoid disaster from water or fire. "No-Tar" Roofing is a non-conductor of heat or cold. Keeps your house warm in the winter and cool in the summer. Try it on your porch or kitchen.

Free Samples to Test When we send you the Free Sample of "No-Tar" Roofing we will tell you ten ways to test it and prove its superiority to any other roofing.

Free Roof Book This book tells "How to Do Your Own Roofing." Tells how to make Valleys, Gutters, Flashings, etc. How to Measure a Roof. Explains the whole roofing proposition. We send the book FREE, postpaid, on request. Get "No-Tar" Roofing from your local dealer. Special mails and cement FREE.

The Heppes Co., 3042 Fillmore Street, Chicago

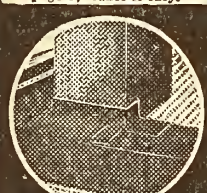

Dealers, Attention—Write for FREE PLAN, by which you can quickly build up a profitable Roofing Department.

Chimney Flashing—Roof Book, page 16, tells how to do it.

FISHEL'S WHITE WYANDOTTES

A Fishel Type

1000 birds ready for the show room. Birds that will prove their supremacy by winning the highest honors for you. If you intend to show do not let a few dollars be the cause of your disappointment, but send direct to us. Be assured of winning by purchasing your show bird or birds direct from the breeders who have built up

THE WORLD'S BEST.

strain to their undefeated record. Our new catalog, with photos of our birds as you would see them in the yards, no retouching, but as they were when the camera saw them. It has information that will help you condition your show birds from the start until the ribbons are tied. Also how to feed and care for utility stock, with the history of how the WORLD'S BEST White Wyandottes from a few birds have been built up to the largest Wyandotte farm of today. It will be off the press Nov. 10th. Worth dollars to you; mailed for 10c in stamps. Send for it at once.

J. C. Fishel & Son, Box J, Hope, Ind.

Buff Orpingtons

WHITE P. ROCKS - CHICAGO WINNERS

Cockerels and pullets from my strain at reasonable prices. Have never been defeated in the show room. Satisfaction guaranteed or your money refunded.

CARL H. KRIPPENE

OSHKOSH, WIS.

Fred E. Wright :: 64 West Side, Monmouth, Ill.

GOLD NUGGET STRAIN. Fine bunch of cockerels for sale but will only have a few pullets, as I am going to stock a large farm in 1908. First come, first served.

The premium ribbons given here are the handsomest given anywhere in the country, and you will be proud to be a winner of one. All who wish to show at Oconomowoc get a premium list, which will be ready by November 1. Charles Behrend, Jr., Secretary, Oconomowoc, Wis.

COLUMBIA CITY, IND.

The Columbia City Poultry and Pet Stock Association will hold their eighth annual show, Dec. 18-23, 1907. Judge W. C. Pierce will place the awards. Columbia City is one of the best poultry towns in the country. They always give a good show and this year the management is pleased to state that it will be larger and better than ever. Liberal cash and special premiums will be offered. Breeders will make a mistake if they do not put this show on their list. For further information address the secretary, Chas. W. Kronmiller.

ADRIAN, MICH.

The Lenawee Poultry Association will hold its second annual show, Nov. 28 to Dec. 2, 1907. Chas. McClave, of New London, Ohio, has been engaged to score the birds. Mr. McClave is well known among poultrymen and needs no introduction. Adrian is the home of a great many poultry fanciers, owners of up-to-date stock. Those desiring to meet with strong competition must not let this opportunity slip by. The annual catalog has been issued, a copy of which may be had by addressing the secretary, J.

L. Heathcock, room 6, Metcalf Block, Adrian.

HOLYOKE, MASS.

The third annual show of the Holyoke Poultry and Pet Stock Association will be held the last week in November (19-22) in Monument hall. Our two previous shows have been a success in every way. All premiums (cash and special) have been paid in full, and our reference is any exhibitor that has shown with us. The association special premiums this year will be gold coin instead of cups. A yellow ribbon will go with each coin. The values will be \$10 and \$5. We shall send out 1,500 premium lists about October 20. If you do not get one send a postal to the secretary.

CHENOA, ILL.

The Central Illinois Poultry and Corn Growers' Association will hold their annual exhibition at Chenoa, Ill., December 10-14, 1907. A. C. Le Duc, poultry judge. J. W. Winters, corn judge. M. B. Corliss, secretary.

SPRINGFIELD, MASS.

The Springfield Poultry and Pet Stock Association of Springfield, Mass., will hold its regular annual show at Apollo hall, Springfield, Mass., December 2, 3, 4, 5 and 6. Present indications promise one of the biggest and best shows in New England. Show will be score card show and the following

list of judges will do the scoring: George H. Northup, R. C. Tuttle, W. B. Atherton, J. H. Drevenstedt, C. A. Ballou and J. Fred Crangle.

The officers of the association are H. C. Page, president; Dr. I. Clark Hill and John Aldrich, vice presidents; H. W. Myrick, secretary, Longmeadow, Mass., and F. W. Havens, treasurer.

TRENTON, MO.

The sixth annual exhibit of the Grundy County Poultry Association will be held at Trenton, Mo., December 24 to 28, 1907. Several special premiums, including a number of silver cups, will be given, besides the liberal cash premiums offered by the association. It is expected that a thousand birds will be on exhibition at this show. C. H. Rhodes, of Topeka, Kan., will place the awards. For full information and premium list address the secretary, L. A. Tracy, Spickard, Mo.

PONTIAC, MICH.

The annual show of the Pontiac Poultry Association will be held December 16-21, 1907. E. E. Hymers, secretary.

PIERCE CITY, MO.

The fifth annual exhibition of the Pierce City-Monett Poultry Association will be held at Pierce City, Mo., Dec. 16 to 19, inclusive, 1907. C. A. Emry, of Carthage, Mo., judge; Thomas Carlin, secretary, Pierce City, Mo.

"Ringlets" Are The Corner Stone

To Success In Barred Rock Breeding

They are the universal standard for matchless quality, and none can fail of success who breed this strain.

The "Ringlet" record at New York since 1887, covering a fifth of a century, is unexampled, and birds from my farm or hatched from my eggs are winning the leading prizes at the world's greatest shows with scores running as high as 94½, 95 and 95½. They have won and made money for others, they will win and make money for you.

The Peerless "Ringlets" Stand Alone

The leaders of all Barred Rocks in North America. They have an international leadership; they encircle the globe and are bred in every land and country where Barred Rocks are known. Every factor known to the science of Barred Rock breeding has been used to bring my "Ringlets" to their present matchless state—

The Ideals of the New Standard of Perfection

Exhibited by me personally at New York they have won a grand total of 101 prizes, 48 of these are firsts and specials, being more firsts and special prizes than won by any competitor in the history of the show. These specials include the \$100 Champion Challenge Trophy (won three times), the \$100 Association Cup (won three times), the American Plymouth Rock Club National Cup, the \$100 Sweepstakes Cup offered by the president for best Plymouth Rock cock, cockerel, hen and pullet any variety, the Harding Challenge Cup for best exhibition pen, and many others.

THE EMPEROR OF THE BARRED ROCK WORLD

Winner of the Premier Special Prize for Best Shaped Male at Madison Square Garden, New York, 1906

If you desire to win, I can help you; if you want to breed winners, I can sell you the birds correctly mated to produce high scorers. 1000 grand breeding cockerels for sale; one of them will improve your stock. I will make you a choice and personal selection. Elegant hens and pullets for sale in any number; special low prices on large lots. Show birds fit to win in the fastest company. Splendid new 48-page catalog mailed upon request; it is full of original pictures of New York winners from life.

WHITE PLAINS, N. Y.

The White Plains' poultry show will be held this season during the week of Thanksgiving, November 26 to 30. Our classification is more liberal than last year; entry fee and prize money remains the same, while our list of specials is something for all exhibitors to strive for, composed largely of silver cups, interspersed with \$10 and \$5 gold pieces and smaller amounts of cash; also a very expensive and elaborate badge as a special prize, competition for which is restricted to membership of our local association. All other special prizes, including silver cups, gold, etc., are open for all exhibitors to compete for, and we cordially invite fanciers and exhibitors to make us a liberal entry and attend our show in person if possible. We should also appreciate their membership if they feel that they would like to become one of our association and thus compete for the special ribbons which we are to offer to members only.

Entries positively close November 15 and will not be received after that

HEALTH IN THE HEN HOUSE

Poultry cannot be profitable and be sick or out of condition. There's a way to keep your fowls healthy all the time.

GERMOZONE in the drinking water twice a week acts as a bowel regulator and corrective, and usually prevents other diseases. That's why it is the standard poultry medicine of the world.

GERMOZONE

is easy to give, and the chickens like it. It cures Roup, Colds, Cholera, Chicken-Pox and all disorders of that nature. Use it once and you'll never be without it when you see what it does for your fowls. Either liquid or tablet form. Price, 50 cents, at your dealers, or direct from

AMERICAN LEGHORN CLUB.

The annual meeting of the American Leghorn Club will be held in Madison Square Garden, New York city, Thursday, December 19, 1907, during the New York show. One hundred and sixty dollars in cash will be offered at this show to exhibitors that are members of the American Leghorn Club. This amount is equally divided on each variety.

Send \$2 to the secretary and become a member and win some of the cash

feed and poultry supply exhibits. The special list is large. It consists of cups, incubators and numerous articles of value, which have been offered by the leading merchants of St. Louis, and the various club specials, including the silver medal and diploma, offered by the American Poultry Association. The show is being well advertised, and a large attendance is expected. Premium list, with full particulars, will be furnished on application, by T. W. Orcutt, Secretary, 4711 Page avenue, St. Louis, Mo.

HOUDAN BREEDERS, ATTENTION.

The annual meeting of the National

and at least \$100 more in specials will be up.

A man will be in attendance the entire week to give the Houdan class every care and attention.

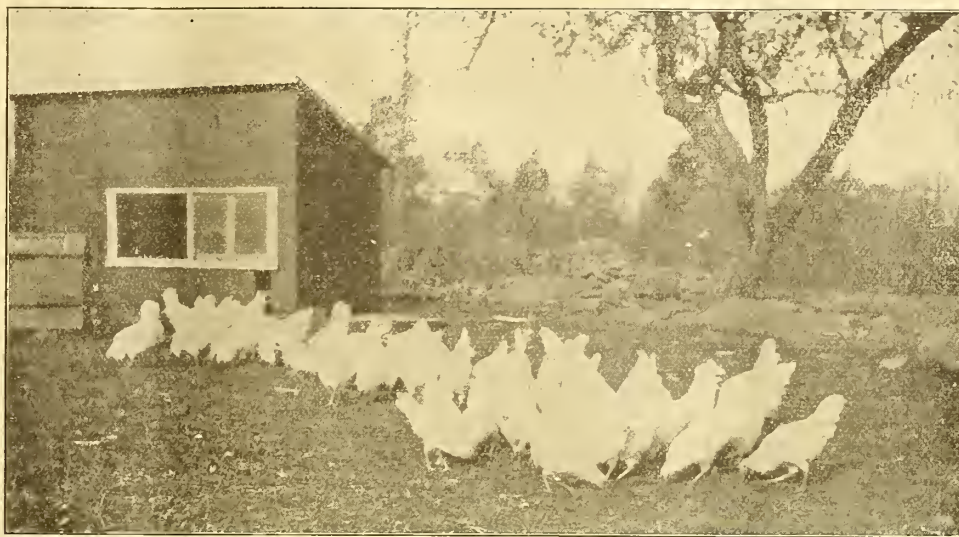

Join the National Houdan Club and help put our grand old utility breed back where it belongs—at the top. Those joining before Jan. 1, 1908, are eligible to compete for all the prizes.

E. F. McAvoy, Jr., secretary.

prizes. W. F. Brace, President; W. W. Babcock, Secretary and Treasurer, Bath, N. Y.

ST. LOUIS, MO.

The St. Louis Poultry and Pet Stock Association will hold its annual exhibit in St. Louis November 25 to 31, 1907. The large building at the northwest corner of Eleventh and Pine streets has been secured. The building is well lighted and ventilated, and being in the center of the city makes it an ideal location for a poultry show, in addition to accommodating 2,000 birds. There will be ample space for

Houdan Club will be held at Boston show, Jan., 1908. Mr. T. F. Rigg, the veteran Houdan breeder and judge, will place the awards and everyone knows that with Mr. Rigg judging the best birds win regardless of who breeds them.

Having promised Secretary Roberts the largest Houdan class ever cooped in America, I make a personal appeal to my friends in the Houdan fancy to send their best birds to next Boston show.

The specials offered are the largest ever placed on Houdans anywhere in the country. Boston show gives \$25 cash and \$100 silver challenge cup. The National Houdan Club gives \$50 cash

of the Waddington Farms, as president, and state vice-presidents as follows: West Virginia, A. B. Butler, of Wheeling; Ohio, Jefferson Rice, of East Liverpool; Pennsylvania, Charles E. Crothers, of Taylorstown; R. B. Naylor, Wheeling, W. Va., secretary-treasurer. The executive committee is composed of L. A. Reymann, H. H. Marsh and A. G. Hubbard, of this city, and C. W. Kendall, of Short Creek, W. Va., and W. G. Smith, of Bannock, O.

The organization will be incorporated as a stock company and shares sold to those interested. The first show will be given the third week in January and it is expected to have a fine exhibition, as

there are many fanciers throughout this section.

THE CORNISH INDIAN CLUB OF AMERICA.

Secretaries of poultry associations that will hold shows this season, and who have not received the Club's offer regarding ribbons, are requested to announce in their premium list that the Cornish Indian Club of America offers (for competition by club members) at all shows where three or more club members compete, a full set of club ribbons for first cock, hen, cockerel, pullet and pen. Membership in the club is \$1 per year, and should be sent to F. H. Williams, secretary-treasurer, Minneapolis, Minn.

The Cornish Indian Club is growing rapidly, the membership having almost trebled since February 1, last. Increased interest is being shown the country over in this breed and this winter there will be more Indians exhibited than ever before. Away out in Los Angeles, Cal., the Pacific coast fanciers of this variety have recently reorganized the Pacific Cornish Club that has been in existence since 1892. Their secretary, Mr. Mercer (who is also a member of the Cornish Indian Club of America, and the editor of the poultry department of the Rural Californian), reports that there will be at least fifty Indians entered at the Los Angeles show in December. Here in the middle-west the Chicago show will be Cornish Indian headquarters and the "hotbed" of Cornish competition. Assurances have been received from different members that will warrant the statement that more than one hundred Cornish fowls will be on exhibition. More than \$130 in cash and the club ribbons will be up as specials for club members, besides the regular prize list and a fine silver cup. The club will hold its annual meeting at the show. Matters of importance, election of officers for the next year, selection of the next annual meeting place, and the matter of changing the name of our variety to the Cornish Fowl, changes in the standard and various matters of interest to Cornish Fanciers will be acted upon. The club asks the support of all the Cornish Fanciers and all are urged to send in their applications for membership.

The fee is \$1, and should be sent to the undersigned, who will cheerfully answer, to the best of his ability, any and all inquiries pertaining to the club and its affairs.

F. H. Williams, secretary-treasurer.
Minneapolis, Minn.

STATE SHOW—RHODE ISLAND RED CLUB OF AMERICA.

The Rhode Island Red Club of America will hold its first state show in Iowa at Rolfe, Dec. 2 to 6, 1907, Judge Thomas J. Southard, of Kansas City, to place the awards.

The premiums offered ought to make this the greatest red show ever held west of the Mississippi River. They are as follows:

Open for Club members in Iowa—
Special club silver cup for best display single comb reds.

Special club silver cup for best display rose comb reds.

Club rules to govern in awarding these cups.

Open for club members regardless of residence—

President's Special—Ten dollars in gold offered by President Philip Caswell, of Newport, Rhode Island, to exhibitor winning highest number of points on either variety of reds—not both.

Special shape and color club badges for best shaped male and female each comb; best colored male and female each comb. These badges are something entirely new and will have a medallion showing likeness of club's new cuts of S. C. and R. C. R. I. Reds for respective classes.

Open to the World—

First Premium: Forty per cent of all entrance money of the class competing.

Second Premium: Twenty per cent of all entrance money of the class competing.

Association Specials: Five dollars cash for three best single comb males and \$5 cash for three best single comb females.

Local Fanciers' Specials: Five dollars cash for the three best rose comb males and \$5 cash for the three best rose comb females. Average scores to determine.

Merchandise specials for best pen each comb.

All the specials are in addition to the regular percentage premiums. The Rolfe association permits birds to compete in both single and pen entries if properly entered. For premium list and show rules address the secretary of the association, A. G. Hancher, Rolfe, Iowa.

To compete for club specials members must be in good standing for 1907. There are over thirty such members now in Iowa. Membership fee, \$1. Send to

Iowa State Meeting of the National Single Comb Buff Orpington Club.

By vote of the Iowa members the National S. C. Buff Orpington Club will offer the State Silver cup at the show to be held at Rolfe December 2 to 6 by the Rolfe Poultry Association. This cup and the usual club ribbons given to winners of firsts are open to members only. All other premiums open to the world. The local association and D. M. Palmer, local club members, each donated \$10 in gold, making a purse of \$20 in specials, to be divided as follows: Five dollars each to the best three cocks, best three hens, best three cockerels and best three pullets. Good merchandise premiums will be offered as specials on pens. In addition to this the association will pay 40 and 20 per cent of the entry fees in competing classes as first and second premiums. All fanciers of this breed are urged to enter their birds and attend if possible. The state vice-president has called a meeting of state members to be held December 5 and all Buff Orpington breeders are invited to be present. Rolfe fanciers extend a hearty welcome. Send to A. G. Hancher, our secretary, for catalogue.

PARTRIDGE PLYMOUTH ROCK CLUB.

A meeting for the purpose of organizing the Partridge Plymouth Rock Club, was called at Philadelphia, Feb. 9, 1907. Henry D. Riley was chosen temporary chairman, Maud E. Frese, temporary secretary. The meeting was called to order and the officers elected to serve for the ensuing year. President, F. A. Keller, Pigeon, Pa.; vice-president, George Fox, Torisdale, Pa.; secretary and treasurer, Wm. F. Fotherall, Oakford, Pa. The executive committee consists of president, vice-president, secretary and two members. Henry D. Riley and Wm. H. More were elected. The purpose of the club is to increase the popularity of the Partridge Plymouth Rock and offer prizes at the leading shows to be contested for by members of the club. It is also our purpose to use our influence with the different associations to appoint judges familiar with the breed—so that the breeder knows exactly what is expected of him. The secretary will be glad to correspond with anyone contemplating the club—dues \$2 per year.

Wm. F. Fotherall, secretary.
Oakford, Pa.

THE ILLINOIS STATE POULTRY ASSOCIATION.

The Illinois State Poultry Association will hold its 14th annual show in the new Coliseum, Bloomington, Ill., Jan. 6-11, 1908.

Present indications promise one of the biggest and best shows ever held in the State of Illinois. This is a show that pays a \$5 premium on a 50-cent entrance fee. The liberal cash premiums offered will bring breeders from many of the surrounding states.

The association will offer as a special premium this year, a "President's

Cup." This cup is of silver, handsomely engraved, value \$25.

Prizes will be offered by specialty clubs as follows:

Eastern Langshan Club—3 cups and a special championship bronze medal.

National Single Comb Rhode Island Red Club—2 cups.

Buff Plymouth Rock Club—1 cup.

Rhode Island Red Club of America—2 cups.

American Rose Comb White Leghorn Club—1 cup.

The judges so far selected are: W. C. Pierce, Indianapolis, Ind.; M. S. Fite, Oklahoma City, Okla.; James Tucker, Concord, Mich., and George Heyl, Washington, Ill. Two others will be selected later.

For premium list and information address the secretary, A. L. Moore, Bloomington, Ill.

EASTERN LANGSHAN CLUB.

The Eastern Langshan Club is prepared to offer at all shows, ribbons, state medals and three sweepstakes cups for the United States.

The membership of this organization is constantly increasing and its members are enthusiastic. This breed is bound to come into prominence again as a show bird, as well as a utility fowl.

Secretaries of shows should communicate at once with the undersigned as to conditions relating to the above affairs. John Aldrich, Secretary-Treasurer, 308 Court Square Theater building, Springfield, Mass.

TO SHOW SECRETARIES.

The American R. C. B. Leghorn Club offers a beautiful diploma for best exhibit of R. C. Brown Leghorns shown to a club member in the United States and Canada. Also silver cups at New York, Indianapolis, Chicago, Oshkosh and Cedar Rapids. Membership blanks can be had by writing the secretary, Fred Alger, Waukau, Wis.

RHODE ISLAND RED CLUB.

The Rhode Island Red Club of America announces that the 1908 edition of

"Red Hen Tales" is now ready for mailing.

This is one of the finest specialty club catalogs gotten out, consisting of about 180 pages. The new features of this edition are photos of executive committee, photos of annual meeting and state cups offered the past two seasons and the most important of all are four new drawings of R. I. Reds. While they are not ideal according to the ideas of all R. I. Red breeders, they are by far the best that have yet been produced.

The booklet also contains many new, interesting and instructive articles on R. I. Reds.

The membership roll shows over 800 members scattered over forty-five states, Alaska, Canada and Hawaii.

Thirty-two of the leading poultry papers of the country are represented in the advertising columns, which will interest those in want of more poultry literature.

Copies of the catalogue may be had by sending 10 cents to E. L. Prickett, Secretary, Hazardville, Conn.

NATIONAL WYANDOTTE CLUB.

Ross C. H. Hallock, secretary-treasurer of our club, has been elected secretary-treasurer of the American Poultry Association, and as it will be necessary for him to give his whole time to this work he has been obliged to resign from the office of secretary-treasurer of our club. It is to be regretted that he could not finish the year, but our executive committee have been fortunate in securing H. P. Rankin, of Hartington, Neb., to take this office for the balance of the year. I earnestly hope that all members will help Mr. Rankin in every way possible to carry on the good work of our club. Mr. Rankin will get out the club catalogue and I hope you will co-operate with him in making this the best one ever gotten out by any club.

The successful associations that secured the \$100 offered by the club in the five sections of the country are: Springfield Fanciers' Club, of Springfield, Mass., eastern section; Madison Square Garden show, New York city, central section; Lincoln, Neb., western section; Dallas, Tex., southern sec-

WHITE CALIFORNIANS.

Among the exhibits in the Pigeon Department in the Wisconsin State Fair was one of a new class in the northwest—White Californians. They came from the Savoy Hotel Loft at Pewaukee, Wis., and were brought from Southern California by that veteran pigeon fancier and correspondent of the American Poultry Journal, Richard G. Fraekelton, who brought the first "Homers" west of New York city from Ghent, in Belgium. The birds are pure, spotless white in feather and may be remembered by tourists in Mexico on the red tiles of the forsaken missions with the blue sky, banana and olive trees for a setting to the picture. Squab raising was what they were brought to Wisconsin for. The meat is white and succulent and a squab dinner and green peas at "the Savoy" at Pewaukee will be one of the things to be taken in by American auto parties, like a white bait dinner at Greenwich.

BUFF LEGHORN CLUB MEETING.

The annual gathering will be held at Madison Square, New York City, on Thursday, Dec. 19, 1907, at 4 p. m. Further information can be found in Buff Leghorn alley during the show. All members and those interested are cordially invited to be present.

The Club this year will offer handsome ribbons to any and every show. Any member or secretary who will write Geo. S. Barnes, Battle Creek, Mich., will receive orders for the same. Do not compare these ribbons with others that are offered, as they are of high standard, and are valuable instead of being cheap. The Club has a few more catalogs that will be sent free on request for same.

LIMA, OHIO.

The fifth annual exhibition of the Lima Poultry Fanciers' Association will be held on January 6-11, 1908. H. P. Schwab will place the awards. Edward Heiser, secretary.

ST. MARYS, O.

The St. Marys Poultry and Pet Stock Association will hold their second annual exhibition January 15 to 18, inclusive. If present indications count for anything, it will be one of the best shows in this section of the state. Messrs. Cram and Gault will do the judging, which insures a "square deal." Many special prizes will be offered, as well as a goodly number of silver cups that ought to be an inducement. Write F. F. Aschbacher, secretary, for premium list and further particulars.

LAKE GENEVA, WIS.

The Lake Geneva Poultry and Pet Stock Association will hold its fifth annual exhibition Jan. 7-10, 1908. Lake Geneva gives one of the best shows in southern Wisconsin or northern Illinois, for many of the Milwaukee and Chi-

cago winners are shown here. The birds receive the very best of care and are often returned to exhibitor in better condition than when received. McClave and Shellabarger will do the scoring, insuring the patrons in advance that the best bird will win. Premium list will be ready Dec. 1, 1907. G. B. Stannard, secretary.

AMES, IOWA.

The Ames Poultry Breeders' Association will hold their second annual show Jan. 7-10, 1908. Hale, Southard and Easton, Judges; Frank N. Fowler, secretary.

CHARLOTTE, N. C.

The eleventh annual exhibition of the Charlotte Poultry Association will be held Jan. 17-23, 1908. H. P. Schwab, judge; W. B. Alexander, secretary.

CARDINGTON, O.

The Cardington Poultry Association will hold their second annual poultry show Jan. 28 to Feb. 1. J. C. Long, judge; F. H. Chase, secretary.

LEXINGTON, ILL.

The Lexington Poultry Association will hold its annual show at Lexington, Ill., Jan. 8, 9, 10, 11, 1907. A. C. LeDuc will place the awards; B. L. Stevens, secretary.

AURORA, ILL.

The Fox River Fanciers' Association will hold their annual show Jan. 13-17, 1908. J. T. Roundtree and Calvin Ott, judges; William Rauscher, secretary.

ZANESVILLE, OHIO.

The Zanesville Fanciers' Association, Zanesville, Ohio, will hold their second annual show January 21-25, 1908. This association is composed of the leading fanciers of Muskingum and adjoining counties. Having gained valuable experience at their first show, they promise exhibitors will be amply repaid by entering their birds at this show. The cash premiums will be more liberal and the special silver loving

CONGO ROOFING

Samples are the best kind of information if they are fair samples—not selected pieces. When you buy Congo, every inch of it is the same as sample. No thin spots, no weak places, no torn edges, no faults anywhere. That is because we inspect it so thoroughly when it is made and pack it so carefully when it is shipped. That's why Congo never leaks. It's all good.

cups, ribbons, etc., placed by a judge of national reputation, will classify this show among the front ranks. All premiums will be awarded and ready for delivery on January 23, two days before the close of the show. Premium list ready December 15, 1907. Send for a copy. Then send your birds. Ben S. Myers, judge. William E. Thomas, secretary.

DON'T MISS IT! \$1,500 IN CASH PRIZES.

Fanciers' Association of Indiana, members of American Poultry Association, also members American Kennel Club, eighth annual exhibition, February 3 to 7, 1908. Meeting American Buff Rock Club. Meeting American Buff Cochin Club. Two hundred dollars in cash prizes on Buff Rocks, \$147 in cash on Barred Rocks, \$132 in cash on Buff Cochins, \$57 in cash on S. C. W. Leghorns, \$57 in cash on R. C. W. Leghorns, \$32 in cash on all other standard varieties. James A. Tucker, O. L. McCord, W. C. Pierce, A. F. Kummer and S. B. Lane, judges. Premium list ready December 1. Send for one. Theo. Hewes, Secretary, Indianapolis, Ind.

AMERICAN BUFF COCHIN CLUB.

The American Buff Cochin Club will meet at Indianapolis during its annual poultry show, February 3 to 7, 1908.

Over \$150 in cash specials, besides cups, ribbons and other specials, are offered. This will be the largest Buff Cochin show held in America next year. C. W. Case, Secretary.

NEWARK, O., SHOW.

The Newark Fanciers' Association will hold its fifth annual show December 31, 1907, to January 4, 1908, and all indications point to the largest and best exhibit in the history of the association. One thousand birds will be entered and at least 3,000 persons will attend, and breeders in reach should not fail to consider Newark in selecting their place to exhibit, as liberal cash premiums, with many valuable specials, silver cups and ribbons, will be offered, which will call out the best stock in Ohio and adjoining states.

The association is composed and the show will be in charge of competent and careful officers, who will see that everything is properly done.

The list will be ready December 1, and can be procured by addressing the secretary, Ed M. Larason, Newark, O.

ST. JOSEPH, MO.

Three years ago the management of the Western Poultry Fanciers' Association determined to make this the big interstate show of the West. The success of the last two years seems to us to justify the claim that we have "made good." As the show is held after the several state shows, the best birds in Iowa, Kansas, Nebraska, Missouri and other states meet here for the final honors of the season, and a premium won here is a guarantee of top-notch quality. Preparations are now under way for the next show, January 27-February 1, 1908, and arrangements are being made to house more birds and entertain more visitors than ever before. Judges Rhodes and Thompson, who officiated last year, have been re-

employed, and in addition F. H. Shellabarger, of West Liberty, Iowa, has been added to the judging staff. This will permit of the assignment of judges in such a way that each will have a class never handled by him before at this show. Charles Heuschle has been secured to judge the pigeons. No other show in the country offers so many high-salaried judges to its patrons. The conditions under which premiums are offered are more liberal than heretofore and the list of specials will be considerably larger. The show is held at the season of the year when birds are in the best condition to take a good score. —E. L. McDonald, Secretary.

OHIO STATE POULTRY SHOW.

This show will be held at Washington Courthouse, O., January 7 to 11, 1908, and will be the largest ever held in Ohio. The organization contains many of the leading fanciers and is without a doubt the strongest organization ever effected in Ohio. Plenty of silver cups, badges, ribbons and, better still, lots of solid cash. The cash specials on breeding pens are larger than any other show in America where competition is open to all exhibitors. The show will be run in the interest of the exhibitor by placing the entry fees the lowest and the premiums the highest of any of the leading shows. If you want to win big money and high honors don't fail to show your birds at the big Ohio show. The following excellent judges will score the birds: Charles McClave, Ira Keller, M. M. Barger, C. R. Dalbey, Theo. Faulstich and Thomas S. Falkner. Send for large catalogue; full of good things for the exhibitor. J. A. Bush, Secretary, Washington Court House, O.

BLUE ISLAND, ILL.

The sixth annual exhibition of the Northeastern Illinois Fanciers' Association will be held January 6-11, 1908, at Saenger Hall, Blue Island, Ill. We are better prepared than ever to take care of all stock and show it to best advantage. Will have new Crescent coops for this show. Premium list will be out in November. D. J. Lambert, judge of poultry. T. B. McCauley, judge of pigeons. A. W. T. Doermann, secretary.

TROY, OHIO.

The Miami Valley Poultry and Pet Stock Association will hold their first show at Troy, Ohio, February 2 to 8, 1908. The association is composed of a large number of hustling business and professional men who are doing everything in their power to make this one of the largest and best shows in Ohio. Mr. Ira C. Keller, the well known judge and breeder will score the birds. R. P. Buffington, secretary.

GREENVILLE, OHIO.

The second annual show of the Drake County Fanciers' Association will be held January 14-18, 1908. Joseph Menke, secretary.

McCONNELLSVILLE, OHIO.

The Morgan County Fanciers' Association will hold their second annual show December 31 to January 4, 1908,

THE C. E. CONKEY CO.,
52 Ottawa Bldg., Cleveland, Ohio

Evansville Poultry and Pigeon Association, January 4-11, 1908. S. B. Lane and George Ewald, judges. The entry fee will be 25 cents for each bird and the premiums will be \$1 first and 50 cents second, five entries to fill a class. In addition to the regular poultry and pigeon departments the association will this year have a dog department. For premium list and further information address the secretary, H. J. Reimer, 113 Heinlein avenue, Evansville, Ind.

ZION CITY, ILL.

The next exhibition of the Zion City Poultry Association will be held at Zion City, Ill., Jan. 14 to 18, 1908. Our last show was a success from start to finish and we are expecting a far larger and more successful one this time. Judge Charles McClave, of New London, Ohio, will place the awards. We cordially invite all breeders of Poultry and Pet Stock to send for premium list and show with us. Ernest R. Heath, secretary.

BELVIDERE, ILL.

The nineteenth annual poultry show of the Northern Illinois Poultry Association will be held at Belvidere, Ill., January 6-11, 1908. G. D. Holden will judge. This show is one of the largest in Northern Illinois. Liberal cash premiums. We invite all breeders to show with us. Premium lists and entry blanks on application. E. L. Robertson, secretary.

KNOX, IND.

The Starke County Poultry and Pet Stock Association will hold their second annual exhibit January 9-11, 1908. Charles V. Keeler, judge. The management solicits the exhibits of all the breeders who can possibly arrange to send their stock. For further information write to the secretary, D. S. Nave, Knox, Ind.

SPRINGFIELD, OHIO.

The fourth annual exhibition of the Springfield Poultry and Pet Stock Association will be held January 20-25, 1908. Albert Seitz, secretary.

TIFFIN, OHIO.

The next exhibition of the Northwestern Ohio Poultry and Pet Stock Association will be held Jan. 8-11, 1908. W. C. Denny, judge; V. Crabtree, secretary.

LEAVENWORTH, KAN.

The Leavenworth Poultry and Pet Stock Association will hold its winter show Feb. 4, 5, 6, 7, 1908. C. H. Rhodes, judge; George V. Flory, secretary.

FINDLAY, OHIO.

The sixteenth annual exhibition of the Hancock County Fanciers' Association will be held Jan. 7-11, 1908. Chas. E. Cram, judge; E. K. Smith, secretary.

HEUVELTON, N. Y.

The next annual show of the Saint Lawrence Poultry Association will be

held Jan. 21-24, 1908. M. S. Gardner, judge; E. A. George, secretary.

DANVILLE, ILL.

Vermilion County Poultry Show, Danville, Ill., December 31 to January 4, 1908. B. S. Myers, judge; C. S. Johnson, secretary.

ALLEGAN, MICH.

The Allegan Poultry and Pet Stock Association will hold their annual show January 10-14, 1908. Eugene Sites, judge. W. H. Warner, Jr., secretary.

SHERIDAN, IND.

The Sheridan Poultry Association has changed their dates from February 3-8 to February 10-15, 1908. T. M. Campbell, judge. John Pritsch, secretary.

BLOOMINGTON, ILL.

Illinois State Poultry Association will hold its fourteenth annual show January 6-11, 1908. Pierce, Hyle, Tucker and Fite, judges. A. L. Moore, secretary.

MENABB, ILL.

The McNabb Poultry Association will hold its annual show December 23-26, 1907. F. H. Shellabarger, judge. James A. McNabb, secretary.

OKLAHOMA CITY, OKLA.

The fifth annual exhibit of the Oklahoma State Poultry Association will be held January 20-25, 1908. Ira C. Keller, judge. John W. Nicely, secretary.

BRECKENRIDGE, MICH.

The Breckenridge Poultry Association will hold their second annual show January 7-10, 1908. F. W. Travis, judge. Charles Watson, secretary.

SHEBOYGAN, WIS.

The fifth annual show of the West Shore Fanciers' Association will be held January 13-17, 1908. James Tucker, judge. E. C. Kuehlman, secretary.

LANCASTER, OHIO.

The annual show of Lancaster, Ohio, will be held January 15-18, 1908. A. B. Shaner, judge. E. H. Roby, secretary.

ELWOOD, IND.

The Elwood Poultry and Pet Stock Association will hold their annual show January 8-13, 1908. Thomas Buck, judge. C. R. Wilson, secretary.

FOREST CITY, IOWA.

The second annual show of the Forest City Poultry Fanciers' Association will be held January 6-9, 1908. D. E. Hale, judge. R. W. Stephenson, secretary.

FORT WAYNE, IND.

At a recent meeting of the Peoples Poultry and Pet Stock Association the annual election was held and the result was that renewed enthusiasm was given the members, for not a dead one

was elected to fill the positions. Experiences have taught us that to have success an association must have their official positions filled with fanciers with business ability and not the man with the so-called business prestige. Dr. Wm. F. Myer, secretary of the great Alton County Fair Association, was elected president and Phil Heller, the original secretary, will fill his former position. The Peoples Association owns their own coops, dog benches and cages and altogether have property approximating \$2,000. After selecting January 21-24, 1908, as their third annual show dates, the following officers were elected: President, Dr. W. F. Myers; vice president, W. D. Holterman; secretary, Phil Heller; treasurer, J. F. Didier; superintendent of poultry, Robert Dean; superintendent of dogs, Otto Wolf; board of directors, Julius Tome, James O'Ryan, J. H. Fox, J. L. Hadling, W. C. F. Ehrman, Tillmann Young. Judges will be selected later.

OHIO BRANCH OF AMERICAN POULTRY ASSOCIATION.

The Ohio Branch at a meeting held September 5 at the Ohio State Fair Grounds, decided to change the dates of their first show to the week of February 10, 1908, which will come between Indianapolis and Pittsburg and make a good circuit, and will have a good list of specials, both cash and merchandise and cups; also the five American Poultry Association specials, valued at \$100. Columbus is a good town, with good railroad facilities, and one of the best interurban centers in the country, which will not only assure exhibitor of good express service, but a good attendance. Empire coops will be used and the judges will be announced later, on account of change of dates.

The Ohio Branch handed in fourteen new members at the Falls meeting and have six more now for the meeting of the Association in Cleveland on November 4, and we will try and make it twenty by that date. We have the timber and we will get the members. This increase, together with the sixty old members we now have will give us one of the strongest branches in the parent body. Our premium lists will be out in good time. Either write to Charles E. Cram, secretary, Carey, Ohio, or G. R. Haswell, president, Circleville, Ohio.

THE NASHVILLE SHOW.

The third annual exhibition of the Tennessee State Poultry Breeders' Association will be held under the auspices of the South Central Branch of the American Poultry Association at Nashville, Tenn., January 6-11, 1908. Miller Purvis, of Peotone, Ill., and J. H. Drevenstedt, of Red Bank, N. J., will judge. This is the South's leading show, and will be larger and better than ever this season. Big premium list and specials. Premium book and entry blanks ready December 1, 1907. John A. Murkin, Jr., Secretary, Nashville, Tenn.

QUINCY, ILL.

The Quincy Poultry and Pet Stock Association has been organized with the following officers: F. C. Hare, president; W. J. Heintz, first vice-president; Paul

Coats, second vice-president; A. J. Mescher, secretary; A. J. Schols, treasurer; J. W. Myers, superintendent.

Their show will be held in Turner Hall, Quincy—the largest and best lighted hall in the city—from January 15 to 21, 1908. Mr. Wm. G. Warnock is the judge. Seven handsome silver cups have been donated and will be offered on the popular varieties. All fanciers in the central states are cordially invited to exhibit. Their birds will receive the best possible care and attention and will be returned promptly. The officers are determined to make the Quincy, Ill., show the leading poultry exhibition in the central Mississippi Valley. Send your name today to the secretary for a premium list and it will be mailed as soon as issued.

CLEVELAND, OHIO.

The Cleveland Fanciers' Club Company will hold their annual show January 27 to February 2, 1908. Thomas F. Rigg, M. S. Gardner, Charles McClave and Eugene Sites, judges. F. L. Gruehl, secretary, 9902 Woodland avenue, S. E., Cleveland, Ohio.

FORT ATKINSON, WIS.

The annual show of the Fort Atkinson Poultry Association will be held December 26 to January 1. James A. Tucker, judge. G. A. Potter, secretary.

KINGSTON, N. Y.

Ulster County Poultry, Pigeon and Pet Stock Association will hold their

annual show December 18-20, 1907. C. A. Roekenstyre, judge. Clarence S. Rowe, secretary.

INCUBATOR COMPANIES CONSOLIDATED.

A consolidation of the interests of incubator and poultry supply companies was effected October 1, and is known as the United Incubator and Poultry Supply Manufacturing Co. The companies entering the consolidation are the Star Incubator & Brooder Co., Pineland Incubator & Brooder Co., Excelsior Wire & Poultry Supply Co., Empire Star Incubator Co., Great Eastern Incubator Co., Star Manufacturing Co., and the North Western Poultry Supply Co. We are informed that several other concerns are now under consideration.

The manufacturing places of the different companies will all be closed with the exception of that of the Star, and all the manufacturing will be done at the latter's place in Lincoln, N. J., where they have a large tract of land adjacent to the railroads. The retail business and general offices of the company will be at 26-28 Vesey street, New York City. The officers are L. S. Bache, president; C. E. Paxton, vice president, and Wm. V. Russ, treasurer.

BUILT TO HATCH AND LAST

"Wallace Brooder"

made of first-grade California redwood—a wood that will not crack, warp or swell with the heat. Hot-water tank made of heavy cold-rolled copper that will last a life-time. Self-regulator

That describes my incubator fully. Built to hatch strong, healthy chicks that will "grow like weeds" from the very first day of their existence. I have been raising poultry for a good many years. I know just what an incubator and brooder should be, and I have included that knowledge in the WALLACE. I give you a whole season to try them, and in addition give you a five years' guarantee. The reason I can do this is because every machine that goes out of our factory is made right in every particular. The double case is

"Wallace Incubator"

substantial and accurate. So perfect that it needs no adjustment during the entire hatch. Supply of fresh air supplied constantly. The Wallace Brooder supplies every requirement of the chick: snug, warm, well-ventilated and evenly heated. Has two compartments; one with hover and warm air radiator, the other for feeding and exercising. My book of Poultry Experience is free for the asking. It tells in a plain, concise way many things I have learned. Covers the whole subject. It's valuable for the beginner as well as the more experienced. My Incubator and Brooder catalog is also free. It will be of value to you whether you buy my machines or not, and I want you to have one.

WALLACE INCUBATOR CO.,

Box 10, St. Joseph, Missouri.

Woman's Home Department

MABEL BATES WILLIAMS, Editor

This Department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others, a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it. All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton Street, Chicago, Illinois.

THANKSGIVING THOUGHTS.

One sometimes wonders if the tendency of the age is not toward a too elaborate and strenuous life. The Thanksgiving Day of our forefathers was literally a day of thanks for bounteous harvests and safety amid the dangers and struggles of a life in a new and wild country. The housewives of even fifty years ago still kept this thought in mind, and though they rose early and toiled till later, for a few days preceding the day of days, the larder was always stocked and everything ready for the finishing touches by the night before Thanksgiving, and that day saw them in church with their families, thanking the Giver of all good things for their many mercies. Today the average house mother thinks she has not done her full duty unless she works until the last moment before serving dinner, and her table must be piled high with all the good things which farm and market can produce. Thanksgiving is the day on which we eat, instead of a day full of the deep inner joy of Thanksgiving.

Is there not a way to reach the simpler life? It rests largely with the home-makers of the land.

While Thanksgiving is essentially the "home" day, the time of all the year when the children love to gather from far and near, and renew the happy days of long ago, around the old home table, there are many homes where this reunion is impossible. All over the land, too, there are homeless ones, to whom Thanksgiving is nothing but a day of sad memories. What a happy combination could be made by bringing these into the saddened homes, the homes where distance prevents the happy reunion, the homes where there can never again on this earth be the old time gatherings. Would it not be worth trying this year?

EXPERIENCE DEPARTMENT.

Mrs. A. S. G. of Berlin, Iowa, writes: "I have had much experience with invalids, and not having seen anything for their benefit in your columns, am taking the liberty of passing on some of the things which I have been taught by

years of service. Milk, sipped just before and immediately after taking medicine, will take away the bad taste more quickly than anything I know of. A patient with a high fever, or one who is suffering from nausea, can be greatly relieved if given little bits of cracked ice, over which a little orange juice has been poured. Never let a patient drink fluids quickly. They should always be sipped slowly. This will relieve thirst much more quickly than if they are swallowed in large mouthfuls. Medicine in tablet form will take effect much more quickly if very hot water is sipped at the same time. Of course medicines should not be given except under the direction of a physician, if a patient is seriously ill, but for a simple home remedy for constipation, nothing is better than two teaspoonfuls of glycerine, swallowed at intervals of an hour apart. Glycerine is also a valuable aid to digestion, if a teaspoonful is taken after a meal."

Mrs. B. M. King of Peoria, Ill., says: "Our men folks think no supper dish is quite as good as my corned beef sandwiches. I get a piece of the brisket, which combines both fat and lean, and tie it into a compact roll. After soaking it for an hour in cold water, I cook it until tender, adding to the water in which it is boiled a carrot, an onion, a tiny bit of chili pepper, a pinch of cinnamon and a tablespoonful of vinegar. Let it cook in the water for about half an hour, then drain, slice, and make into sandwiches with buttered Graham bread, spreading with mustard, horse radish and a little pickles, chopped fine."

Mrs. B. L. T. of Trenton, N. J., tells of her method of cleaning silver. She

Save Your Eyes
and Save Your
Oil with an
Angle Lamp

THE short dark days and the long evenings are at hand. Now is the time to cut your winter's coal bill in two. You can do it with an Angle Lamp—and have a better, brighter, and yet a more restful light, than you ever had before. We only want a chance to prove to you that an Angle Lamp will save you one-half to two-thirds the money you have been spending for light. Just think of it! One quart of oil in an Angle Lamp will give a full, clear, beautiful light for 16 hours because not a drop of oil is wasted—a light better than electricity or gas—a light that does not throw off any soot—a light that actually helps weak eyes and prevents strong eyes from becoming weak. Do you know why so many people—even children—have to wear glasses? It's the bad lights—and especially the white gas or gasoline mantle lights—they are the worst of all. Any scientist will tell you so. Fill out the coupon in this advertisement, mail it to us and get our Free Book No. 59. It tells you how the Angle Lamp is made. It is different from anything you ever saw—and so simple! The book illustrates and describes our 32 varieties of lamps at prices to fit your pocketbook. It proves to you that you can cut your light bill down half, no matter whether you use one lamp or a dozen.

Try An Angle Lamp 30 Days Free

The book also tells you about our Thirty Days' Free Trial—you can select any lamp you want and try it thirty days at our expense. If it doesn't make the finest light you ever read under; if it doesn't do all it is guaranteed to do—send it back and it won't cost you a cent. A strong numbered guaranty goes with each lamp. Write now. The time to begin saving is when you need more light.

says: "I have considerable of the old-fashioned silver, which is plain and does not have the fashionable 'gray finish.' I use this every day, and as often as it tarnishes I boil it in a solution of common washing soda and water, using a piece of soda half the size of an egg to two quarts of water. When this is boiling, put in the silver, letting it boil five minutes, then rinse in clear water and polish with chamois skin. This will brighten old silver beautifully."

Says Miss Mollie J. of Hillsdale, Mich.: "If more people knew how easy it is to keep shoes looking and feeling like new, they could be spared much tribulation when the shoes look shabby and the pocketbook is limp. Rub a little good vaseline on the shoes every few days with a soft cloth, and it will add greatly to their long life. New shoes can be preserved, and old shoes brightened. It is especially good to use on enameled leather, and will prevent its cracking. Old shoes should be blackened, polished and then rubbed with vaseline. It is a great help also in preventing shoes from wetting through in an unexpected storm."

Mrs. T. R. French of Des Moines, Ia., tells of her method of boiling eggs, which, she says, makes them much more digestible than the usual way. She has boiling water in a pan and places the eggs in this, immediately covering them and drawing the pan to the back of the range, where the water will not boil. In from eight to ten minutes they will be soft boiled, and the white, while thoroughly cooked, will not be a hard, leathery mass. Another good way to boil eggs, she says, is to put them in cold water and gradually bring this to a boil. When the boiling point is reached they will be soft boiled.

A TYPICAL THANKSGIVING DINNER.

Thanksgiving is not so much a time of dainty menus, as it is a reversion to the good old days of our grandfathers, when the fruits of the farm were the feature of the day. One can get unusual and fanciful side dishes at any time of the year, at the expense of a little time and patience, but when Thanksgiving Day comes, nothing tastes quite as good as a big turkey, flanked by the simply prepared and common vegetables, and followed by generous slices of mince and pumpkin pie. In many families the turkey must be supplemented by chicken pie, or else the traditions of the day are not complete.

Old-fashioned chicken pie: Line the bottom and sides of a deep baking dish with a baking powder biscuit dough, fill with cold boiled chicken, cut into convenient pieces, and the bones and skin removed. Cover with gravy, and instead of placing the usual crust over all, cut pieces with a biscuit cutter, and cover the top with these. They are much easier to serve than the usual top crust.

Creamed onions: Remove the outer skin of the onions and let them stand in salted water for half an hour. Boil in salted water until tender, drain, and pour over them a cream gravy, made by stirring together two tablespoonfuls of butter and one heaping tablespoonful of flour, and adding warm milk, stirring constantly. Let this boil up, and pour over the onions, adding seasoning to taste.

Squash in the shell: A pretty way to serve squash is to steam and mash it as usual, but instead of serving in a veg-

etable dish, fill the hollowed out shell of a squash with it. Let the mashed squash be heaped well above the top of the shell, in cone shape, and mold it, with the handle of a fork, as butter is often moulded, in "pineapple" shape, putting bits of butter on it just before bringing to the table.

Cabbage omelet: This makes a pleasing change from boiled cabbage. Cook the cabbage the day before using. Chop fine, add a liberal amount of seasoning, a cupful of milk and two well beaten eggs. Put in a buttered baking dish, and bake til the custard sets.

THANKSGIVING CANDIES.

No matter if the children have eaten more than is good for them, and more than the grown-ups would believe possible, there is always room for a "sweetie" after the pies and puddings have been disposed of. The following recipes are so simple that they will not hurt the littlest fellow of them all, and they have the merit of being easily prepared.

For a foundation, take the white of an egg, and an equal amount of water, or, better still, of cream. Stir into this "four X" confectioner's sugar, which is a very fine powdered sugar, and which is not carried by all grocers. When it is stiff enough to mould with the hands, turn out on a sugared board, and use as a foundation for various candies.

Cream walnuts are made by pressing half a walnut on a small piece of the candy. Nuts, finely chopped, or cocoanut, are good, when stirred directly into

the cream, and then moulded in fancy shapes. Chocolate creams are made by moulding small balls, and letting them stand for half a day. Have ready, over the top of the teakettle, or standing in a pan of hot water, a little dish of melted and sweetened chocolate, and into this, by means of a hat pin, dip each ball of the cream, standing it on oiled paper to harden.

SOME SWEET POTATO RECIPES.

Every one is used to the familiar methods of cooking sweet potatoes, but not all know that sweet potatoes are much better flavored and the annoying dryness to be found in nearly all baked ones can be avoided if they are boiled for ten or fifteen minutes before being put in the oven for the finishing touches.

Candied sweet potatoes are a typical southern dish, which, when once used in northern homes, finds a permanent abiding place. To make these, pare and halve sweet potatoes, and place in a baking pan, sprinkling well with butter and sugar. Pour over the whole some hot water, and bake until done, renewing the water often enough to keep them from burning onto the dish.

Sweet potatoes are excellent when served on the half shell. Bake good sized ones, and when done cut them in two, scoop out the contents, and mash, adding a teaspoonful of butter, a tablespoonful of milk, salt and pepper to taste, for each potato. Fill the skins with the mixture and return them to the oven to become hot before serving.

Amatite
ROOFING

For Farm Buildings

When the proprietors of Bellemeade Farm roofed their big buildings (one of which is shown above), they chose Amatite. Why? First—Because Amatite costs less than other roofings. Second—Because Amatite has a mineral surface that never needs paint.

Most other kinds of ready roofing need to be painted regularly, and to re-paint all the roofs of Bellemeade Farm every year or two would have called for a huge expenditure of labor and money.

Weren't the Bellemeade people sensible in selecting Amatite? Even if your roofs are not as large as these, the economy of using Amatite is just as great in proportion.

Amatite is easy to lay, requiring no skill or tools. Nails and cement are free, packed inside each roll.

Sample free on request. Send for it. Address nearest office.

PARIS FASHIONS

For Readers of

American Poultry Journal

The American Poultry Journal will supply its readers with perfect fitting, seam allowing patterns from the latest New York and Paris designs, at the low price of 10c for each pattern. Full directions how to cut and how to make with each pattern. Our large book of Paris fashions—80 pages—containing the illustrations and descriptions of 1000 seasonable styles for ladies, misses and children costs 5c for postage alone—we sell it to our readers at 10c, postage paid by us, in order that they may have a reliable guide to fashions.

A Pattern Free. Free Fashion Book

Get us just one new subscriber to American Poultry Journal at 50c for the year, and we will send you free any of these patterns and our large fashion book.

2111—Ladies' Tucked Night-Gown, with Back Yoke and Long or Three-Quarter Length Sleeves. The fullness in the front of this pattern is put into groups of small tucks, while the back has a shallow yoke. 4 sizes, 32, 36, 40 and 44.

2106—Girls' Dress—Dotted challis or striped mohair are both suitable for this little frock. 4 sizes, 6 to 12 years.

2110—Misses' Yoke Waist, with Three-Quarter Length Sleeves and with or without Mikado Bolero. Cashmere, nuns-velvet or surah silk are all suitable for this model. 3 sizes, 13 to 17 years.

2097—Ladies' Tucked Eton Jacket, with Long or Three-Quarter Length Sleeves. Suitable for separate model or as part of a suit. 6 sizes, 32 to 42.

2098—Ladies' Tucked Shirtwaist. Mohair, taffetas, silk or flannel are all suitable for this pretty waist. 6 sizes, 32 to 42.

2113—Ladies' Six-Gored Flare Skirt, with Plaited Sections at Center of Front and Back. Suitable for all the winter materials. 6 sizes, 22 to 32.

2114—Misses' Seven-Eighths Length Coat, with Kimono Armholes. Suitable for broadcloth or the imitation fur material, which is so popular this season. 3 sizes, 13 to 17 years.

2091—Ladies' Dressing Sack, with Elbow Sleeves. A pretty combination of light blue cashmere and cream colored valencennes lace. 4 sizes, 32, 36, 40 and 44.

2090—Girls' Jumper Dress, with Plaited Skirt and a Separate Gimp. Brown serge worn over a buff-colored challis gimp makes this a most stylish little costume. 4 sizes, 6 to 12 years.

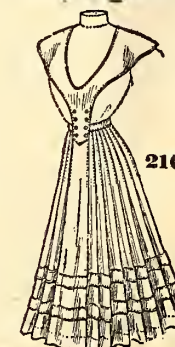

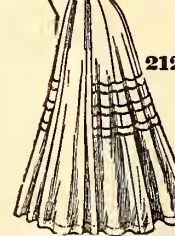

2124—Misses' Tucked Waist, with Sectional Yoke and Three-Quarter Length Sleeves. This pattern is capable of many suggestions, and both sections of the yoke may be developed in the same material if desired. 3 sizes, 13 to 17 years.

2122—Girls' Tucked Coat. Capable of development in any material from storm serge to velvet. 4 sizes, 6 to 12 years.

2103—Ladies' Tucked Shirtwaist with Long or Elbow Sleeves. A distinctively mannish style of shirtwaist that is very attractive. 7 sizes, 32 to 44.

2123—Ladies' Eleven-Gored Ripple Skirt, with Plaits at Front and Back. Suitable for Oxford suiting, striped or plain cheviot, tweed or serge. 7 sizes, 22 to 34.

2102—Misses' One-Piece Kilt-Plaisted Skirt, with Bretelle Bertha. A pretty and becoming model for the young girl. 3 sizes, 13 to 17 years.

These are a welcome addition to a Thanksgiving dinner.

THANKSGIVING DECORATIONS.

Nothing is prettier or more appropriate at the Thanksgiving season than the countless decorations which autumn herself provides. In fact, there are so many possibilities that it is difficult to decide which to use. In a household where there are children, great sport is afforded, not only on Thanksgiving Day, but for many evenings preceding it, in cutting pumpkins into fanciful shapes, for decorating the room. This is an old idea, but when carried out with other vegetables, some amusing as well as unexpectedly pretty results can be obtained. While bouquets of very natural looking flowers can be carved from such commonplace things as carrots, turnips, beets and potatoes. In fact, there is almost no limit to the possibilities when bright boys and girls set their wits to work.

For those who prefer daintier effects the woods yield rich stores of leaves, vines and bits of brightness. Chrysanthemums seem especially appropriate at this season, and make a beautiful centerpiece, while nothing is prettier than a platter of fruit, surrounded with autumn leaves.

One of the most typical harvest decorations is made by using a basket of bearded grains and grasses for a centerpiece, with smaller clusters at each place. A novel bouquet holder, and one that is very effective, is made by hollowing out a good sized cabbage, to hold a vase of flowers. The curled green leaves of the vegetable are very pleasing in their effect.

FRUIT PARFAIT.

After a hearty Thanksgiving dinner nothing tastes better than a simple frozen dessert. Many people, especially those living on a farm, think they must forego this pleasure because they do not have an ice cream freezer. There are dozens of delicious recipes which may be made with whipped cream, the only necessary articles for freezing them being a tin lard pail, some ice and salt. Ice cream, to be fine grained, must be thoroughly stirred and beaten in the freezer, but any of the recipes which call for whipped cream can be made and packed in salt and ice for about four hours, requiring no further work. If the cream runs short, beat the whites of three or four eggs very stiff, and add to it, and no one will be the wiser, as the fruit which is added covers the egg flavor completely. Any kind of fruit juice may be used, and bits of finely chopped fruit are a good addition. To make a parfait whip a quart of thick cream very stiff with a cup of sugar. Add a pint of fruit juice, pour the mixture in a mould or pail, put on a tightly fitting lid, and put a strip of cloth, wet in melted butter, around the rim, so that no water can get in. Pack the ice and salt for several hours.

THE KING OF THANKSGIVING FRUITS.

Every one has some favorite recipe for pumpkin pie, but this delectable Thanksgiving fruit is seldom served in any other way. If you want to add a little of the spice of life to your Thanksgiving dinner, why not try one of the following recipes?

Baked pumpkin: Cut a ripe sugar

pumpkin into long, thin sections without paring it. Place these in a buttered baking dish, sprinkle with granulated sugar, and bake till it is tender. Serve at once.

Fried pumpkin: Pare and cut a small, green pumpkin into slices, dip in beaten egg and then into rolled cracker or bread crumbs and fry in deep, hot lard. Sprinkle with salt and pepper and serve at once.

Pumpkin custards: Wash and dry pieces of the pumpkin, after carefully removing the seeds and soft insides. Grate without peeling, and to every cupful of the grated pumpkin add half a cup of sugar, one egg, well beaten, one tablespoonful molasses, one teaspoonful ginger, half a teaspoonful salt, and a large cup of rich milk. Bake in custard cups, set in a pan of water. This also makes a delicious filling for pies.

SPICED CIDER.

Even those who are the most ardent advocates of temperance can find no fault with this delicious addition to the Thanksgiving menu, for cider will not boil unless absolutely fresh and sweet, and for this purpose cannot be more than twenty-four hours old. Heat the cider slowly, add a little sugar, and a bag containing a tablespoonful of whole cloves and three sticks of cinnamon. Let it simmer fifteen minutes, and serve hot with the pie course.

GOOD WAYS TO USE EGGS.

Chocolate feather cake: Cream one and a half cups of sugar, with half a cup of butter, and add three well beaten eggs. Into five tablespoonfuls of cocoa or grated chocolate put three of sugar and three of boiling milk, and beat up, add immediately to the cake mixture, and last add two cupfuls of flour into which have been sifted two heaping teaspoonfuls of baking powder.

Washington pie: Two eggs, one cup sugar, half cup butter, two-thirds cup milk, two teaspoonfuls baking powder, flour to make not too stiff a dough for cake, flavoring to taste. Bake in two sheets, and when cool put together with the following cream filling:

Cream pie filling: One cup of milk, one egg, half a cup of sugar, a teaspoonful of corn starch, wet with a little cold milk, flavoring to taste. Cook in a double boiler, and when cold use as filling and covering for cake.

Eggs Lyonnaise style: Remove the shells from six hard boiled eggs, separate the yolks and whites and chop the whites fine. Chop two medium sized onions fine, and fry in a little butter. Pour over the onions a cup of good meat broth of any kind, season with salt and a little grated nutmeg. Add the whites, let the sauce boil up, put in the whole yolks and let them heat through, being careful not to break them. Lift them out and put them on slices of toast, pouring the sauce over all. Garnish with parsley and serve at once.

Peasant eggs: Cut thin slices of bread, trim off the crusts, and lay the bread in a well buttered dish, covering each slice with thin shavings of cheese. Beat eggs, allowing one to each slice, season with salt, pepper and a little nutmeg, and pour over the bread. Put the dish in a moderate oven until the eggs have set. Serve in the dish in which they were baked.

Storm Doors and Windows

50% Below Dealers' Prices

Will Save You Enough Fuel to More than Pay for Themselves

ALASKA \$1.82 White Pine, Hand Painted, Clear Glass.
STORM Size 2-6 3/4 x 6-7; High Grade Throughout
DOOR

The above are Specimen Bargains from our

Grand Free Illustrated MILLWORK CATALOG

of Doors, Windows, Mouldings, Interior Finish, Roofing, Glass, Paint and Contractors' and Builders' Supplies

All our Millwork is high grade and up to the standard established by the Sash, Door and Blind Manufacturers' Association of the Northwest. We are the famous manufacturers selling direct to users at mill prices. We guarantee to save you 25 to 50 per cent of what your local dealer would charge, freight included. No matter who you are or where you live, or whether you order \$5 worth or \$10,000 worth, you get the absolute wholesale price on everything, and **Quality, Safe Delivery and Satisfaction Absolutely Guaranteed**. Our mill is the largest in the world—has 163,000 feet of floor space (four acres). Your home bank or any bank in Davenport will tell you we are responsible and will do exactly as we agree. Save the dealer's profit, save delay and get the best goods by ordering direct from our **Grand Free Millwork Catalog** at wholesale prices. You will be amazed to see how much money we can save you. Just a postal—today—gets the complete catalog.

Gordon, Van Tine Co., 398 Case St., Davenport, Iowa

For Big Poultry Results

Feed cut clover or alfalfa—the cheapest and most productive poultry food for winter feeding. Great for all poultry—especially ducks. Don't buy so-called "clover-meals"—half dirt and dust. Cut it yourself with a new

HUMPHREY Rapid Clover CUTTER.

Cuts finer, more rapidly and more easily than any other. Fine enough for young chicks—no pieces over 1/8 inch. Double knives, strong and durable. Unlike any other.

Send to-day for "Poultry Helps," Humphrey's new book of Poultry Specialties. It's free and it's all right. Address **HUMPHREY, New Street Factory, Joliet, Illinois.**

GO-WELL FARM

A Thorough Breeding Establishment

By breeding the best laying Barred Rock hens to the sons of hens that laid over 200 eggs in a year, my stock has been improved so that 2000 hens averaged 146 eggs each last year. Trap nests have been used exclusively for nine years. For eight generations no male has been bred from unless his mother laid 200 (or more) good eggs within a year.

FOR SALE: Tested yearling hens with individual records. Pullets and cockerels whose mothers have records of 200 to 255 eggs in 365 consecutive days.

G. M. GOWELL, Owner and Manager

ORONO, MAINE

McDanell's Golden and Wyandottes

Early birds now ready. High quality exhibition and breeding stock; lots of them. Look up my record at national shows; write me your wants

Old Homestead Farms, J. H. McDanell, Prop., Warsaw, Ky.

MONEY
MAKING

Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. Haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first two weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND Poultry Foods

take the lead with successful poultry raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall—it makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected" are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

THOSE INDIAN RUNNERS AGAIN.

American Poultry Journal.

I am aware that it takes a little nerve to take up this breed of ducks again. I can imagine I see a smirk or a wink and a nod or a nudge behind my back at the mention of Indian Runners. I can hear a faint whisper of sounds in which I can distinguish "Belgian hares," "Bohemian oats," "Wheels in his head," etc.

But that's all right. There is a sucker born every minute. Some one has "bit" and got left. Another thinks what a manager he must have been to fail on a sure thing like that. Now when I took up these Indian Runners some told me they made the run of the West along with the Belgian hares and were of about equal stamina. One man told me that when they were introduced in this country a duck that did not lay 200 eggs in one year was a very poor duck indeed. I, myself, say the same thing, and any kind of fowl that is put out as a laying breed that does not lay 200 eggs, I would not breed from. They have had their run in all kinds of hands and in hands that did not understand them, and failed to win out. Ducks need as much attention as chickens. They produce more eggs than chickens and of course must have plenty of food and water. I don't mean a pond full of tad poles and frogs, but plenty of nice clean water to drink. A trio of Indian Runners will use up ten gallons of water every day to drink and wash in. In my experience they care very little for running water or a pond. Mine run within 100 yards of a running stream fed by springs, and during the last year I have driven them to the stream twice in the fore part of the day after they have laid in the pens; they did not beat me back to the pens, but came very near it, and they have never been there since, and I now have young ones full grown that have never been to the stream, although I have seen them within one hundred feet of it.

I say here that for eggs as good as any chicken egg, and for early maturity as broilers they are six weeks ahead of a chicken, and I have Barred Rocks and both kinds of Rhode Island Reds.

I would not advise letting them run with chickens as they spoil drinking fountains. But for some nice clear profit and quick returns they are all right. Always feed ducks ground soft feed. Their food goes direct to the grit, and as they have no crop, whole grain is not good for them. I feed two-thirds bran and one-third cornmeal, with a handful of sand to every four ducks. Besides this, I always keep a box of course, clean sand where they can get it.

And boys, simply because some fellow has failed with them, don't drop them from the list. Will F. Clements.

Agency, Iowa.

It is different from the
rest and better than the
best of other kinds.

Hoffman Poul. Supply Co.
Waverly, Ala.

After selecting the nice, trim, shapely pullets for winter layers, fat the culls and young cockerels for early market. This is a profitable adjunct to the poultry business and when properly carried on is like *finding* good money. Try it and make a good thing better by giving regular portions of

Dr. HESS Poultry PAN-A-CE-A

in some one of the daily feeds. Its use corrects any tendency toward indigestion and a consequent "going back" in the condition of the fowl. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M. D., D. V. S.) and is endorsed by leading poultry men and fanciers in both Canada and the United States. It is composed (besides bitter tonics for digestion) of iron for the blood and the cleansing nitrates which expel poisonous matter. It feds fowls in less time than can be done by any other way of feeding, makes chicks mature early and hens lay abundance of eggs. It is also a germicide and prevents disease. A penny's worth feeds 30 hens one day. *Sold on a written guarantee.*

DR. HESS & CLARK, Ashland, Ohio.
INSTANT LOUSE KILLER KILLS LICE.

Owen Farms 1907 Chicks

are even golden Buff in Orpingtons and Rocks; pearly White in Rocks and Wyandottes; iridescent greenish Black in Orpingtons; cleanly and sharply Barred in Rocks.

IN ALL VARIETIES

We have chicks approaching perfection in type; we have chicks approaching perfection in color; we have chicks approaching perfection in heads; we have chicks approaching perfection in minor details.

IN ALL VARIETIES

We have chicks combining most of the above characteristics, and approaching PERFECTION.

IN ALL VARIETIES

We offer you finely mated breeding pens and superb show birds in young or old; and, best of all, every bird has the blood of first place New York males and females.

IN ALL VARIETIES

We will give you exceptionally good value for any amount you wish to pay and we will pay return charges on birds not proving satisfactory and will cheerfully refund your money. Our catalogue gives our winnings, tells about us and our Farms, and is yours for the asking. Come and see our birds if you can, if not, write

Owen Farms, Wm. Barry Owen, Prop. Box A, Vineyard Haven, Mass.
Maurice F. Delano, Mgr.

Buff Rocks

Have added to my yards the late B. E. Johnson's entire flock that produced winners the past few years at N. Y., Chicago, Hagerstown, St. Louis, Indianapolis and other large shows. Young stock and some choice breeding hens for sale. Show birds a matter of correspondence. Always state your wants. E. L. DELVENTHAL, care Citizen's Bank, Warrenton, Mo. State V.-P. B. Rock Club.

Push Your Hens This Winter

They are worth to you just what you get out of them. You can let that be little or you can make it much. You are keeping the hens for the eggs they will lay. Then why not start in with the determination to handle them right and get every egg that it is possible to get and make your profits something worth while?

Darling's Laying Food

is used by most of the truly successful poultry raisers—you should use it also. Its reputation is established. It *does not work miracles*, it will *not* make your hens lay an egg a day; but it *does* contain egg-making ingredients in right quantities, it *does* promote laying, and it *does* get the very best results from every hen that she is capable of giving.

Don't you want to start in the winter with a food that fits the need of your hens, a food that induces laying in cold weather, a food scientifically prepared, a food that will pay for itself over and over in the greater number of eggs you will get? Then use Darling's Laying Food

**In 100-lb. Sacks, Price \$2.00
f. o. b. Chicago or New York**

Darling's Scratching Food	\$2.00	Darling's Beef Scraps	\$2.75

HUMPHREY, White St., Factory, Joliet, Ill.

MR. CHARLES A. CYPHERS WINS IMPORTANT PATENT SUIT.

Friends of Mr. Cyphers will be glad to learn that the patent office has decided in his favor in the interference suit on his latest invention in regulators—the corrugated leaf thermostat. This gives Mr. Cyphers not only the most sensitive, but the strongest thermostat yet devised; a heat regulator that is absolute in its working.

This thermostat, like the old one, is composed of four leaves of metal, having a greater coefficient of expansion than the two pieces of steel to which they are riveted. Unlike the old thermostat, however, which was exceedingly sensitive but easily damaged, the new thermostat, which has three corrugations in each leaf, is exceedingly strong and rigid, is not easily damaged, and is so positive in its action that the entire movement given off by the greater coefficient of expansion between the two

metals is transmitted to the controlling device without any loss of movement.

In the old thermostat there were but two flanges, which under stress or pressure gave way slightly, so that the entire coefficient of expansion was not transmitted, by reason of this slight bending or giving way. With the corrugated leaves there are six downward bends, and the double rib in the middle of each leaf, coupled with these downward bends, imparts to the leaves great strength. The zinc leaves, which have the greater coefficient of expansion, are flattened in the middle, which leaves them much stronger at this point than in the old device, where the flanges were cut away, weakening the metal.

This patent gives Mr. Cyphers the control of the best regulating device that probably will ever be invented. Mr. Cyphers states that his incubator organization is stronger than ever this year, that he is even better equipped than before to turn out the high-class Model Incubators and Brooders, and that the volume of business already booked for fall and early winter delivery is twice as great as at this time last year. We wish Mr. Cyphers all the prosperity he so richly deserves.

At this season of the year when your new laid eggs are selling at fancy prices, it is most important that poultry men feed result-getting foods to their laying hens. The importance of a sufficient supply of protein or animal food in the mash is acknowledged by all successful poultry feeders. When the animal food is combined with a properly balanced ration and must therefore be consumed with the ground grain, better results are assured than by feeding the animal food separately. One of the best egg making mashers for this purpose is manufactured by the City Milling Co., Box 72, Quincy, Ill. This food, known as National H-P Egg Mash, contains 20 per cent of protein and is so compounded that when fed to young hens it will make eggs and not fat. A useful food to feed in combination with the Egg Mash is the H-P Egg Scratch. This food also contains a liberal supply of animal matter and is an egg maker. As the City Milling Co. manufacture their own poultry feeds and ship direct from the mill to the fowls, they can offer you better value for your money than the poultry supply houses or agents that sell foods on which several profits must be charged. Look up the ad of the City Milling Co. on another page of this issue and write them today for their catalogue and samples of these and any other food that you require.

At the great Allentown Fair, in the strongest class of Orpingtons got together, Fairview Farm, Easton, Pa., J. S. Haupt, manager, won first Single Comb Black Orpington hen, first Black Orpington cock, first Rose Comb Buff Orpington hen, first Rose Comb Buff Orpington cockerel, first Rose Comb Buff Orpington pullet, first Rose Comb White Orpington pullet, first Rose Comb White Orpington cockerel, second Single Comb White cock; also winning pen Single Comb White Leghorns.

FACTS OF INTEREST TO FARMERS

New ideas in the care and feeding of farm animals have brought to pass some radical changes in farm methods, greatly to the advantage of the farmer.

As an instance, take what may be called the "tonic idea." It teaches the necessary use of a proper digestive and corrective preparation during the weeks or months in which an animal is being fitted for market.

While this is a comparatively new idea, its importance cannot be overestimated. No one single feature of the "new farm science" touches the profit side of the business so directly as this.

It points the way to a vastly more prosperous era in cattle raising as a branch of farm operations. It means greatly increased profits and a business established on a permanent basis.

The "tonic idea" is a simple, common sense proposition that the feeder of live stock will instantly appreciate once it is brought to his attention. Every feeder knows that at some point in the fattening process there may come to the animal a more or less serious digestive breakdown caused by long-continued heavy feeding. No need to say that this disaster is to be avoided if satisfactory results are to be reached or a margin of profit realized.

The purpose of the stock "food tonic," then, is to correct and prevent just this dangerous condition, and as the "ounce of prevention is worth the pound of cure" it follows that no feeder can afford to wait until the mischief is done, but should keep the digestive apparatus of his fattening cattle in a healthy condition from the start by the use of the tonic.

Experiments carried so far that there can be no reasonable doubt of the accurate results reached, prove that a "food tonic" containing the bitter principles which aid digestion, iron for the blood and nitrates which cleanse the system, is especially beneficial in preserving perfect animal health under all conditions.

No farmer or feeder can afford to risk his stock without it.

By acting directly upon the digestive organs, it enables a fattening steer to consume, day after day, large amounts of grain, and of course lay on flesh rapidly.

To the cow in milk the result is the same, except that the increased assimilation of food is secreted as milk rather than fat.

To horses the "food tonic" is very valuable. General good condition is always present where it is given and in fitting for market it gives most successful results.

Sheep and hogs derive an equal benefit from the "food tonic."

Lambs grow more rapidly where a very little is given in daily doses and tip the scale at a better figure when market day comes.

Hogs receiving it are uniformly healthy and make enormous growth in less time than would be possible under any other system of feeding. These facts show how vitally the farmers' interest is associated with the "food tonic" idea.

Such men as Professors Winslow, Quitman and Finley Dun endorse its ingredients and successful men are using it.

BETTER FARM BUILDINGS.

Two farmer friends, who live several miles apart, met in town the other day. Brown was in to buy shingles for a new barn. He was lamenting the fact that shingles were so high, and he was sure the quality was not nearly so good as it should be for the money.

Smith had built some new farm buildings a year or so before and said that he had been through the same thing when he built, but a neighbor had built a new house a few months before that and had used a ready roofing that looked good and wore so well that he went over to inquire where he got it and what it was.

The neighbor told him it was the same kind that his father in Germany had used for years. That the company had built a factory in their country to supply the demand for it, and that just as soon as he found that out he wrote to the Patent Vulcanite Roofing Company, 626 S. Campbell Ave., Chicago, Ill., to learn where and how he could buy some of their Vulcanite Roofing for his house.

The company sent him the name of their agent and so he bought the same roofing he had been raised under in Germany.

Smith went to the agent and bought Vulcanite for his buildings and was glad he met Brown before he had bought his shingles. He was sure he would like

Vulcanite better and it would save him considerable money on his house.

Brown thanked Smith for the advice and information and said that the saving would be enough to nearly build a tool house that he had been needing for a long time.

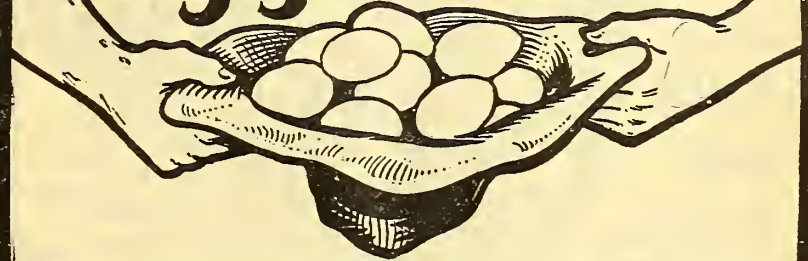

If you are going to build or if you have an old roof that needs repairing, write to the above company today for their roof book, "The Right Roofing and the Reasons Why." It will save you money, while "Vulcanite" will enable you to have more and better farm buildings.

At this season of the year our readers should be making their plans for the coming hatching and laying season. More and better systems should be thought out. A better and more complete record of everything should be

kept. One of the most important of these is an egg record of each hen in the flock, and a record of what each egg produces. The only reliable way to do this is by the use of trap nests. Information on trap nests can be secured by any and all of our readers if they will write to F. O. Wellcome, Yarmouth, Me., and mention American Poultry Journal.

Chas. Howison, Sandwich, Ill., breeds line bred Buff Wyandottes of the very highest type and his birds win in the strongest competition at the largest shows. He has been exceptionally successful this season in bringing to maturity a large number of extra choice specimens which he is offering to readers of American Poultry Journal at very reasonable prices. Better write him at once and mention A. P. J.

We're Getting More Eggs Now

"Since we began feeding to help the hen, we're getting twice as many eggs as we ever got before." That's the way the letters read we're getting every day from people who have adopted **LEE'S EGG MAKER** for their poultry.

Egg Maker makes more eggs—that's the reason. It furnishes the egg-materials the hen needs, and we guarantee it will increase the egg-yield. It is largely granulated blood (deodorized)—the highest form of concentrated meat food, combined with roots, herbs, spices, proportioned and prepared as our years of experience have proven is best and most effective for increasing egg-production. **Egg Maker** takes the place of meat food at a great saving in cost. One trial will convince you that it will be profitable for you to feed it regularly. Sold by all dealers, or direct by

"WHY FOWLS NEED CHARCOAL."

This is the name of a new booklet just from the press. Every poultry raiser ought to have it. Charcoal has a peculiar property. It does not dissolve in anything, but has a way of absorbing bad gases and odors; it corrects the acidity of a sour gizzard and helps prevent much of the bowel trouble and diarrhea which so frequently cuts out all the profit on a flock of hens and chicks.

Indian Head Charcoal is a good brand to buy, because it is so clean and is full weight and uniform in size. It comes in five sizes for chicks, hens and pigeons. Large poultry raisers all over the East, in the Central and Middle States are users of the Indian Head brand. Instances might be named as Millville Poultry Farm, New Jersey; D. J. Lambert, Rhode Island; F. A. Marshall, Wisconsin; Pontair Poultry Yards, Colorado. One page of this brand new booklet is devoted to a list of large poultry farmers who are using Indian Head Charcoal. This booklet is sent free to any one. It tells all about charcoal, how it is made, how to feed the different sizes, what it's good for etc. The makers, Thomas Bros. Co., Philadelphia, Pa., send 100 pounds anywhere east of the Missouri River for \$2 and pay the freight. Be sure to get the free new booklet.

THE PURINA PRIZE FEED CUP.

The Purina Mills of St. Louis, Missouri, are doing the handsome thing for poultry fanciers this fall, by offering at all the leading poultry shows the handsome gold-lined cup illustrated above.

This is without doubt one of the handsomest prizes ever offered at a poultry show—and it is being offered by THE PURINA MILLS at each of the leading poultry shows to poultry raisers whose birds score the highest number of points.

The cup stands 10½ inches high without the base, and is handsomely engraved, making a beautiful trophy—one that any person will be glad to own.

Are you going to enter your poultry at any poultry show this fall? If you are, you should write to the secretary of the show you expect to attend and ask him for entry blanks for the PURINA PRIZE CUP CONTEST—which will be sent you free.

REMEMBER THE NAME—and be sure to enter for the right cup. It's the PURINA PRIZE FEED CUP—offered by the manufacturers of the celebrated PURINA POULTRY FEEDS.

The practical poultry raiser has found it economy to buy the best feed, and that's why we see so many bags of PURINA on successful poultry farms today. There's no deception about PU-

RINA Poultry Feeds—no drugs—no grit—no damaged grains—only pure seeds in a large variety are used in making PURINA Feed—which make it a balanced ration.

Purina Poultry Feed is sold at grocery stores as well as at feed dealers. If you cannot be supplied by either we recommend that you write to the PURINA MILLS of St. Louis, Missouri, for samples.

Don't forget about the cup—and if you are going to compete for the prize be sure and write to the secretary today and ask him to send you entry blanks and full information regarding the PURINA PRIZE CUP. He will send it to you free.

FOR THOSE WHO DESIRE TO MAKE THEIR OWN INCUBATORS AND BROODERS AND THOSE WHO DESIRE TO IMPROVE THEIR OLD MACHINES.

There is no question that the H. M. Sheer Co. of Quincy, Ill., have hit upon a popular and practical idea in bringing to the reach of every one interested in hatching and rearing poultry by artificial means their unique plans for building your own incubators and brooders, and also Mr. Sheer's wonderful and efficient line of incubator and brooder fixtures.

In the first place their plans, which, by the way, are so simple and easy to follow that a ten-year-old boy can successfully build an incubator or brooder from them, appeal to a very large number of people who get as much pleasure out of building their machines, houses, etc., as they do in the hatching and rearing. This is best evidenced by the thousands of people who have built their own machines from these plans. Last year nearly 25,000 people were interested. The plans are sent absolutely free—the Sheer Co. supply at a reasonable cost all

parts not possible for you to make. It is surprising how efficient the machines are made even by people who have never had any experience.

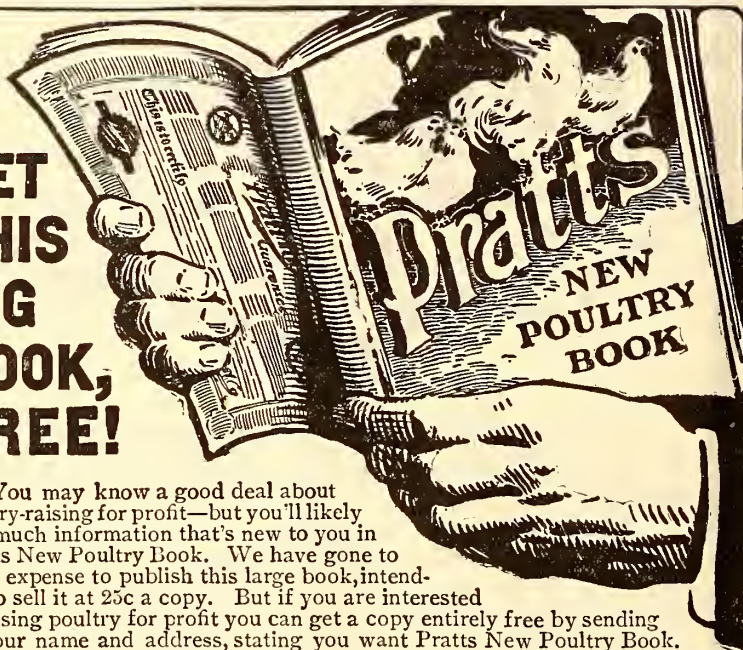

As to the fixtures, Sheer's Acme Automatic Lamp and Acme Compound Regulator, they are so made that they can be attached to any make of incubator and the saving they effect in oil consumption, in time, in worry and labor soon pays for their cost. The compound flame regulation alone saves one-half the oil. It also insures uniform temperature. Lamp holds gallons of oil, saving frequent filling. It can't upset, no danger from fire, and is the most accurate outfit ever invented.

Just write a post card and get a copy of their 1908 catalogue and complete plans for building your own machines. They are sent free by addressing H. M. Sheer Co., Quincy, Ill., and mentioning this paper.

We wish to call the attention of our readers to page 781, where will be found the ad of the Kellerstrass Farm, Kansas City, Mo. This farm, at a tremendous outlay of money, has stocked one of the largest poultry farms in the West with the largest and best flock of White Orpingtons ever gotten together, and they are now prepared to furnish exhibition or breeding birds of the very highest quality and birds that are pure white. Don't fail to read their ad in this issue and write them for prices and particulars. Mention American Poultry Journal.

C. E. Spaugh, Rugby, Ind., has added four more poultry buildings to house his large flock of Barred Rocks, consisting of about 500 finely marked birds. Mr. Spaugh's farm is located one mile south of Rugby and four miles east of Hope, where U. R. Fishel is located. Any one interested should pay him a visit or if you are in the market write him for prices.

GET THIS BIG BOOK, FREE!

You may know a good deal about poultry-raising for profit—but you'll likely find much information that's new to you in Pratts New Poultry Book. We have gone to great expense to publish this large book, intending to sell it at 25c a copy. But if you are interested in raising poultry for profit you can get a copy entirely free by sending us your name and address, stating you want Pratts New Poultry Book.

The book is strictly up to date and most complete in every particular; describes all the different breeds, and which are best—gives plans and specifications for model poultry houses—tells how to raise poultry for market—how to make hens lay all the year 'round—how to prevent and cure various poultry diseases, etc. It's a book you will want to keep handy where you can constantly refer to it—every bit of information is worth money to you. Send for your copy today. You'll soon learn how to increase the egg-production of your hens, if you try a package of

Pratts Poultry Regulator

This is just what hens need to aid their digestion, regulate their bowels, and other organs, and keep them in perfect health. Remember that only healthy hens lay—and that it's the healthiest poultry that grows quickest and biggest for market. That's why Pratts Poultry Regulator will enable you to make more profit out of your poultry. Get a package from your dealer today—costs 25c to \$3.50 according to quantity.

EXPERT ADVICE FREE

When anything happens to your poultry or other livestock, write us, describing the symptoms, and our expert Veterinarians will advise you what to do. This service is absolutely free.

TWICE GUARANTEED

Every Pratt Preparation you buy is twice guaranteed—by us and by your dealer—to do everything claimed for it. You run no risk whatever—so why shouldn't you try them?

Remember Pratts Powdered Lice Killer, Pratts Head Lice Ointment for little chicks, and Pratts Roup Cure, are fully guaranteed. Ask your dealer about them.

PHILADELPHIA, PA.

MILLER'S SHIPMENT TO GERMANY.

Wm. Miller of Crescent, Mo., recently sold a trio of White Plymouth Rocks for 1,400 marks (\$350) to a breeder at Ehrfurt, Germany, to be exhibited at one of the leading shows of that country. We are informed by Mr. Miller that this order came through his advertisement in the American Poultry Journal.

Frank Langford, Box B, R. R. 10, Nashville, Tenn., won on Single Comb Rhode Island Reds at great Tennessee State Fair, 155 Reds competing, as follows: First cock, first hen, first cockerel, second pullet, first and third pens, \$25 gold special and \$50 Corno cup for best display in the show. This was conceded to be the strongest quality show ever held in the South. The Langford Reds have been the leading winners in the big shows of the South for years.

G. A. Gibson, Hector, Minn., the Buff Orpington specialist, reports that he has on hand a very choice lot of young stock that he will price right. These are from prize winning stock and are guaranteed to please. Write for prices and mention American Poultry Journal.

Evangeline Poultry Farm, Birmingham, Mich., breeders of R. C. Rhode Island Reds, has a change of ad this month. This firm is producing some of the good ones in this variety. Write them and mention American Poultry Journal.

We wish to call the attention of our readers to the advertisement of the National Civil Service School, Catawba, N. C., on another page. Any one wishing a government position under civil service rule will find it to their interest to write them at once.

Frank Churchill Sibley, South Bend, Ind., breeder of Rose Comb Rhode Island Reds, is offering exceptional values this month in prize winning stock. His birds are winners wherever shown. Don't fail to write him for prices and mention American Poultry Journal.

Joseph Fattig, Baltimore, Ohio, writes us stating that he is receiving good results from his ad in our paper, having shipped stock to nearly every state in the Union. He still has some very good stock to sell. Write him for particulars. All stock sent on approval.

Manverse & Rasch, Box 1, Trenton, Ill., breeders of White Wyandottes exclusively, have several cockerels and pullets to dispose of for exhibition and utility. They have won several prizes at the leading shows, including St. Louis and the Illinois State Fair.

At the great Allentown Fair in hot competition Buck Hill Poultry Farm, Buck Hill Falls, Pa., won first pen and third pullets in Buff Wyandottes. They offer a fine lot of Buff and White Wyandotte cockerels for the fall trade, the pick of 1,500.

Fount H. Rion, Nashville, Tenn., breeder of White Wyandottes, has several cockerels and pullets to dispose of for the winter shows. Mr. Rion won at the Tennessee State Fair.

Frank Langford, Nashville, Tenn., breeder of Rhode Island Reds, is well qualified to furnish winners for the winter shows. We guarantee him.

HOW a bird's nest caused a revolution in the methods of modern incubation is all told in our new book. It also describes the

NEW METHOD INCUBATOR

—the result of careful study of the way Nature assisted the mother bird to hatch every egg in her nest. If you want an incubator that will hatch more chicks, better, stronger and healthier chicks, you'll want this new book. It's free. Write for it today.

The New Method Incubator Co.,
150 W. Main St., Morrow, Ohio.

Turn the Wick

as high as you can—there's no danger—as low as you please—there's no smell. That's because the smokeless device prevents smoke or smell—that means a steady flow of glowing heat for every ounce of fuel burned in a

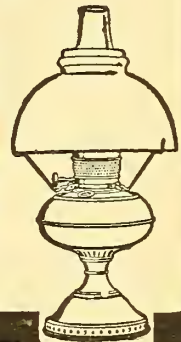

PERFECTION Oil Heater

(Equipped with Smokeless Device)

You can carry it about and care for it just as easily as a lamp. Brass oil font holds 4 quarts burning 9 hours. Handsomely finished in japan and nickel. Every heater warranted.

The **Rayo Lamp** adds cheeriness to the long winter evenings. Steady, brilliant light to read, sew or knit by. Made of brass, nickel plated, latest improved central draft burner. Every lamp warranted. If your dealer cannot supply Perfection Oil Heater or Rayo Lamp write our nearest agency for descriptive circular.

The World's Best Layers

PROVED IN PUBLIC COMPETITION

A pen of SIX of my S. C. WHITE LEGHORNS at the Western Australian Laying Competition (under Government supervision) laid 1494 eggs in 12 months, i. e., 249 each, beating 100 pens in that test, and over 900 pens which have competed in other states. I am prepared to land either at VANCOUVER or SAN FRANCISCO trios (cockerel and two pullets) of same stock at \$50.00 per trio. Hundreds to select from. Remember the greatest layers on earth.
NOTE.—I have satisfied the editor of this paper of my good faith and ability to do what I promise. Full particulars mailed on receipt of request. Money Orders payable at my postal address.

W. L. WILLIAMS :: CLARENDON, SOUTH AUSTRALIA

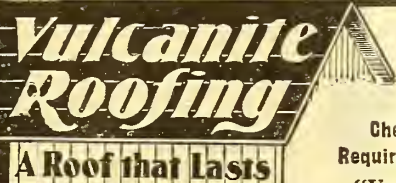

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.
BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Inb Cnp for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners Photographs on application. Eggs in season.

One Thing Worth Remembering—Every

Cousins STANDARD Incubator

Is Equipped With Chick-Saving, Labor-Saving

Cousins Automatic Egg-Turning Trays

EVEN if you are not going to buy your new incubator just now, there could be no better time to get the catalogue that tells all about the Cousins Standard Incubator, how it's made and why it is best. At all the big poultry shows in the season past, the Cousins was the incubator sensation. Experienced, successful poultry raisers say it is the climax of development in incubator manufacture, ranking in a class all by itself. Reports from users confirm this. Uniformly it gives best results.

Our Exclusive Patented Features

gives the Cousins Incubator undeniable superiority, automatic and absolutely even distribution of heat, with one-half the usual amount of fuel; perfect ventilation and moisture system; no cold air draughts; chick drawer, through which the chickens are removed without opening the egg chamber; greatest durability; handsome appearance; and the Cousins Automatic Egg-Turning Tray, which saves work and time, saves the chicks and insures biggest hatches. Write today for our illustrated book. It tells all about the egg-turning tray. Address

COUSINS INCUBATOR CO., 113 Woodard Building, WARREN, PA.

The EXCELSIOR and WOODEN HEN INCUBATORS

HATCH CHICKENS BY STEAM

With the Wooden Hen or Excelsior Incubators. Substantially built and thoroughly finished throughout, they solve every problem of ventilation, moisture and heat—practically run themselves and require but five minutes' time daily while in operation. The Wooden Hen and Excelsior Incubators are not only the best and the most economical to operate, but they also hatch the greatest proportion of fertile eggs.

They are sold at a remarkably low price. Send for free catalogue, illustrated in colors, containing full information regarding incubators and Poultry Appliances and price list.

"White Frost" Strain White Wyandottes

New Jersey's Leading Strain. Our winnings of last year place us in about the front rank; the 41 prizes which our birds captured should cause their offspring to be looked upon with favor. Whites. We have over 700 chicks. They show great quality, and all who are interested in these birds should come and look them over. Our sale of breeders, including a number of last year's prize winners, is now on, and we can furnish pens, trlors, single specimens or birds in large quantities that will give satisfaction. Those who come first will have the first choice. Visitors are welcome whether they desire to purchase or not; we are anxious to show our plant. Columbians. We would also be glad to show our Columbian Wyandotte chicks. Buff Cochins Bantams. We have been particularly successful with these birds this season, and have some nice chicks and breeders for sale. We fully expect to add to our list of ribbons in this variety during the coming show season.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

ROCK HILL POULTRY FARM OSSINING, N.Y.

A WORLD'S RECORD NEVER EQUALED

At the World's Poultry Show of 1907, held at the Jamestown Exposition, in competition with the best fowls from 33 different States, we made an unparalleled winning on our Silver P. Rocks, W. Wyandottes, S. C. W. Leghorns and Buff Cochins Bantams. Our complete winnings on these varieties was as follows: Silver Rocks, all 1sts and 2ds except one; W. Wyandottes, 2d and 4th cock, 1st and 4th hen, 2d and 4th eckl., 5th pullet, 1st, 2d and 4th pens; S. C. W. Leghorns, 2d and 3d cock, 1st and 5th hen, 1st, 2d and 4th eckl., 1st, 4th and 6th pullet, 1st, 2d, 3d and 5th pens; Buff Cochins Bantams, 2d cock, 2d hen, 1st and 2d eckl., 1st and 2d pullet and 1st pen. **Best display on all four varieties.** If you want the best birds for a reasonable price we shall be glad to correspond with you.

S. C. RHODE ISLAND REDS

AT GREAT JAMESTOWN SHOW we won 1st, 4th, 6th ecls., 4th, 6th pullets, 3d cock, 3d hen, special for shape of male, special for color of male, Red Club Cup for best S. C. male. 15 prizes on 8 birds in strongest class ever shown. Stock for sale. Catalogue free.

FRANK LANGFORD, R. R. 10, Box B, NASHVILLE, TENN.

**World's Foremost
White Wyandottes**

Have won the very highest honors at New York, World's Fair, Boston and other leading shows; have sold winners for all the prominent shows in U. S. and Canada; many owe their success to my strain. 15 years line bred for vigor as well as fancy points. REMEMBER, all stock returned at my expense if not satisfactory. I have some grand early birds. I am breeding Columbian Wyandottes on same lines as the White Wyandottes.

J. H. JACKSON - Lock Box 88 - HUDSON, MASS.

A fine lot of exhibition birds for sale; pullets, cockerels and yearling hens. Remember, my stock wins the blue ribbons wherever shown. If you want to win at the fall and winter shows place your order with

W. L. FERN - ELGIN, ILLS.

S. C. W. Leghorns

The Best Trap Nest Made

is the **ACME**, because it does not frighten the hens that use it. Remember that the hens do not have to be **COAXED** or **TRAINED** to use the **Acme**, because all that is required of the hen is to walk into the **Acme** like she would to use any box or barrel nest. It is simple in construction, easy to operate, safe, roomy and comfortable. It is well ventilated and darkened. It never fails to trap the hen, and the weight of the hen when she enters nest throws the trap. No wires to push against, no tilt heard, no springs, no pulleys, no weights to get out of order. Your money back if not as represented. Cat. free.

ACME TRAP NEST CO. - BEDFORD, INDIANA

King's Champion Barred Rocks

Clean sweep winners at three recent Ill. State Shows. More good youngsters to offer than ever before. Yearling breeders; show birds, cocks and hens; sure winners. Can please you in any quality you are in need of. Remember, high-class exhibition birds are my specialty. Write me what you are in need of for your show. Testimonial sheet and show record free.

"THROW PEARL TO POULTRY AND WATCH RESULTS"

The Grit That Grinds

Not all so-called grits do grind. Some are so round-cornered and so soft that they cannot do their duty well as "hen's teeth." It takes the sharp-cornered, hard kind like Pearl Grit to fulfill the conditions. Poultry-raisers have found it out, so have their fowls—that's why it's so popular. But it serves a double purpose. It not only grinds the food in the gizzard, but it helps make shell and con-

tributes to the bony framework of the body and to the circulation, to the covering of feathers; to scales on the legs; to beak and toes. It balances the food ration making it valuable and economical. Our little free booklet "True Grit" tells more facts.

Pearl Grit

contains Iron for blood; Lime for shells and bones; Silica for feathers, claws and beak; Magnesia for shell; Sulphur for yolk. So it's a balancer to grains, grasses, flesh, etc., supplying what they cannot. If you would have your fowls vigorous, bright-eyed, strong in legs and in eggs, throw Pearl to them and watch results. You'll like to read our little book, "True Grit." It tells a lot about chicks and hens that you would like to know; and also explains how necessary Pearl Grit is. Write to-day.

GOLD IN THE GRIT BAG

Here is what the miner would call "pay dirt" for it will put money in the poultryman's pocket. It's nature's own product made from the natural rock and ground to the proper sizes for feeding all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's system and assist the digestive and egg-making organs in the production of eggs and vigorous growth. Turkeys, ducks, chickens, geese, little chicks and pigeons thrive on it. Its a most economical and profitable grit; just what you are looking for, 50 and 100 lb. bags. Car load lots if desired. Send for free sample. Agents wanted.

FOREMOST POULTRYMEN OF AMERICA

WHAT THEY SAY ABOUT THE

STANDARD CYPHERS INCUBATORS AND WHEN THEY SAID IT

These World-Famous Hatching Machines cost more (though not much more) than the cheaper kinds, but it's because they are "built that way." The evidence follows:

U. R. FISHEL, Hope, Ind.—"Yours is the most complete hatcher I have ever tried, and I have handled or operated incubators ever since they were on the market in the U. S."—Aug. 28th, 1907.

THOS. F. RIGG, Iowa Falls, Ia.—"My winners and the high-class exhibition birds which we have produced for years have all been hatched in your machines."—Sept. 17th, 1907.

J. M. WILLIAMS & CO., North Adams, Mich.—"If we were to buy a dozen new incubators tomorrow, they would all be your Latest Pattern Standard Cyphers."—Aug. 7th, 1907.

E. B. THOMPSON, Amenia, N. Y.—"During my nearly thirty years' experience in breeding exhibition and 'Ringlet' Barred Rocks I have never seen or used the equal of Cyphers Incubators and Brooders."—Oct. 25th, 1907.

HENRY TRAFFORD, Chenango, Falls, N. Y.—"Admittedly, the best S. C. Rhode Island Red male produced last season—so said by leading judges and breeders—was hatched in a Standard Cyphers Incubator and brooded in a Cyphers Style A, Outdoor Brooder." Jan. 20th, 1907.

ARTHUR G. DUSTON, South Framingham, Mass.—"I have used your machines for thirteen years and still feel that I am doing my customers a favor by recommending them."—Sept. 3rd, 1907.

CHAS. V. KEELER, Winamac, Ind.—"The chicks I hatched in the Cyphers were really stronger than those hatched under hens and developed into larger and finer prize winning specimens. They include my \$500 cock 'Chief Winamac.'"—Oct. 25th, 1907.

F. C. SHEPHERD, Toledo, Ohio.—"I have used Cyphers Incubators successfully since 1899 and have never had what might be called a poor hatch from them. I repeatedly obtained 90 to 92½ per cent. Oct. 24th, 1907.

A. C. HAWKINS, Lancaster, Mass.—"After several years' experience with the Cyphers Incubator I consider it the most practical hatching machine on the market. In my opinion the Cyphers brooders will raise every strong, healthy chick, with proper care."—Oct. 9th, 1907.

GARDNER & DUNNING, Auburn, N. Y.—"We have tried a number of different makes of incubators and brooders but have found no machine that gives as good satisfaction as the Cyphers."—Aug. 22nd, 1907.

PHILANDER WILLIAMS, Taunton, Mass.—"We had chickens hatched under hens and in Cyphers Incubators. I never knew which were hatched under hens and which in the incubators. My chickens were never stronger nor more healthy."—Aug. 24th, 1907.

GEO. H. NORTHUP, Raceville, N. Y.—"I sold one of my Rose Comb Black Minorca cocks for \$300.00, and have sold for \$100.00 each, several Single-Comb Black Minorca cocks all of which were hatched in your incubators."—Sept. 9th, 1907.

D. W. YOUNG, Ridgewood, N. J.—"We have used five of your Latest Patern machines and have had some of the greatest hatches we have had since we began using incubators. One hatch gave us a chick from every fertile egg."—Sept. 5th, 1907.

W. H. BUSHELL, David City, Neb.—"I had good hatches and strong chicks, free from cripples, and these chicks were very easy to raise in brooders."—Aug. 29th, 1907.

WILLIAM McNEIL, London, Canada.—"This is the best incubator I ever operated. The chicks all hatched at once, practically speaking, and I had a little over 95½ per cent of healthy, strong chicks."—June 26th, 1905.

Write Today for our 212-page Free Catalog of Incubators, Brooders and Poultry Supplies—the Biggest Catalog—the Greatest Variety of Poultry Supplies Manufactured by Any One Firm—Everything for Poultry-Keepers. MY SOUVENIR BOOKLET ON REQUEST

ADDRESS:

S. D. LAPHAM, Dearborn, Mich.

LOCK BOX 6789.

MENTION THIS JOURNAL.

**You are ALL CONFUSED
about Pianos!**

- You want the sweetest toned
- You want that sweet tone to last
- You dislike to spend any more

money than necessary.—But every adviser, and so-called expert, recommends a different make. You are like a man lost in the woods. You don't know which way to turn. This surely describes your position.

THE REMEDY:—Educate yourself on the subject! Study—read—Read more—Study more. Then listen in the quietness of your own parlor to the tone of the highest grade piano you can get, but without agreeing to purchase it. Call

in all those musical friends who you *know* are not under past obligations to any piano dealers or friends of dealers. Resolve you will study attentively piano tone and will be deaf, while studying, to the magnetic talk and persuasiveness of salesmen. This is the *intelligent* way. It's the way you planned your new home. You made a long study of it calmly, thoroughly, and you became quite an expert. You can be just as expert about pianos.

We are willing to send you free two books:

One officially entitled "The Book of Complete Information about Pianos."

YOU NEED THIS BOOK of 156 Pages handsomely bound, if you ever intend to buy a piano, no matter what make.

It tells how to test a piano and how to tell good from bad; what causes pianos to get out of order. It makes the selection of a piano easy. If read carefully it will make you an expert judge of piano-tone, of action, workmanship and of durability.

It tells everything that any one can possibly want to know about pianos; gives a description of every part of the piano, how put together and all the processes of manufacture. Gives description of the new invention for aiding learners to play called **THE NOTEACCORD** (endorsed by Paderewski and other great pianists). It explains Agents and Dealers' Methods and Devices.

It tells about the very first piano; the qualities of labor, the felt,

ivories and woods used in every high-grade piano and compares high qualities with the cheaper kind (used in inferior pianos). Describes what constitutes a musical-piano-tone, and in fact is a complete encyclopedia.

You need and should have **THIS EDUCATIONAL BOOK** to thoroughly inform you whenever **CONFUSED ABOUT PIANOS**.

Its scores of illustrations (all devoted to piano construction) are not only interesting but are *instructive*; to children as well as to adults.

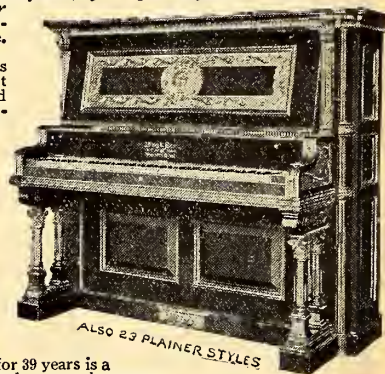

You will certainly learn a great deal about pianos that you could not hear of or read **ANYWHERE ELSE**, for it is absolutely the *only* book of its kind ever published. Nevertheless we send it free.

The other book is also copyrighted but is a short story named **"JOHN HONEYWELL'S REA-**

SONS." The story of an average American family which was **ALL CONFUSED** about Pianos—it is interesting, readable and prettily illustrated—gives a little hint of a love affair which the piano helped along, as many pianos have done.

These two books cost quite a sum to produce, print, bind, illustrate and mail. Upwards of 400,000 have been issued and without a single exception have been highly commended.

SO FAR not one word about ourselves. We are and have been the manufacturers of **THE FAMOUS WING PIANO** for the past 39 years!

ALSO 23 PLAINER STYLES

We have supplied over 40,000 American Homes with WING PIANOS.

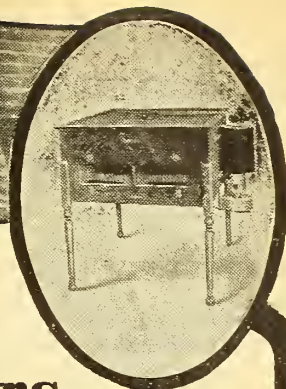

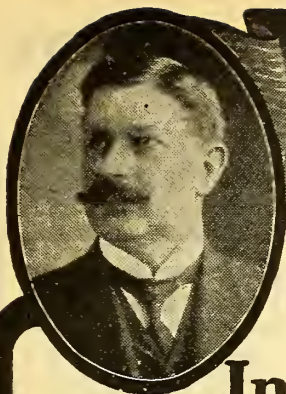

We refer to Banks, Governors of many States and Judges; to Merchants, Conservatories of Music, Singers and Professors of Music. We have been students of vibration and of musical tone and strength of materials during all these 39 years. The first patent issued to our Mr. Wing, Senior, for improvement on pianos was in 1876 and other improvements have been invented since at the average rate of more than one yearly. These facts prove our skill and long experience, but would not be mentioned if we did not wish to show you that we know the piano subject as few others have had the opportunity; for 39 years is a long—long time for a business house to "live and learn" and constantly prosper.

Write for the books at once or fill in the coupon. Take it out and mail to us now while you think of it (and while you have the coupon). You will be under no obligations whatever.

WING BUILDING

WING & SON.

MODEL

Incubators and Brooders

Hatch and Rear Successfully at the Time of Year When Poultry-Raising is Profitable

You don't want an equipment that can be used only during warm weather, when myriads of hens are hatching. Then your broilers are marketed—or your late pullets begin laying—at the time of low prices.

Begin your work early, and market at the time of scarcity. There is more profit in one broiling-chicken marketed in March, April or May, than in six marketed in September or October. A pullet that will begin to lay in the early fall will pay for herself in two months, while the bird that does not come to laying maturity until spring, when every other hen is laying, barely pays for her keep.

Model Incubators and Brooders are what you need for raising winter chicks, or early pullets. They are substantially made. The **Model Incubators** have thick walls, and will hatch in a cold room. The **Model Brooders** are well heated and well ventilated—just what is needed for cold-weather work.

Model Incubators and Brooders are used by the successful winter-chicken men, the successful egg-men, and the successful duck-men. They give profitable results—the results you are looking for.

WRITE FOR DESCRIPTIVE LITERATURE.

Model Corrugated-Leaf Compound Thermostat

*Strong
Active*

*Sensitive
Positive*

Most perfect heat-controller in existence

A perfect heat control stimulates and holds the germ development uniformly constant and normal—as under a hen.

R. R. 1, TREMONT, ILL.

BOGARDUS' ORPINGTONS

S. C. BUFF AND BLACK. Won at the great Jamestown Exposition. Blacks, (7 entries) 1st, 2d, 5th pullet, 2d, 3d, 5th ckl., 2d cock. Buffs, (4 entries) 3d hen, 4th ckl. At Hagerstown, Md.: Blacks, (no Buffs shown) 1st cock, 1st hen, 2d ckl., 2d pullet. Two specials: Best Orpington male and best Orpington female. At Nashville State Fair: Blacks, (5 entries) 1st ckl., 1st cock, 1st hen, 1st and 2d pullet. Buffs, (2 entries) 2d ckl. The above winners at the three largest shows held this fall in the U. S., indicates the quality of my birds better than anything I might say. Over five hundred (500) head for sale. Cocks, hens, cockerels and pullets, good enough to win in any show.

O. A. BOGARDUS

::

Box 31, WARSAW, KY.

Ring's White Rocks

have established unequalled records at Chicago, Detroit and many other shows, besides producing Hendryx, the noted \$500 cockerel whose score of 96 1/4 is the highest ever given to a White Rock cockerel in competition. Hundreds of early hatched, well matured youngsters, many sired by Hendryx and his sire, that will take the ribbons this fall and winter. Write early for free catalogue and prices on exhibition and breeding stock.

R. F. D., DECATUR, MICH.

INCUBATOR "WHYS"**WHY NOT PROGRESS?**

Why pin your chances of success with chickens to hens who refuse to set when you want them?

Why have setting hens when they ought to be laying?

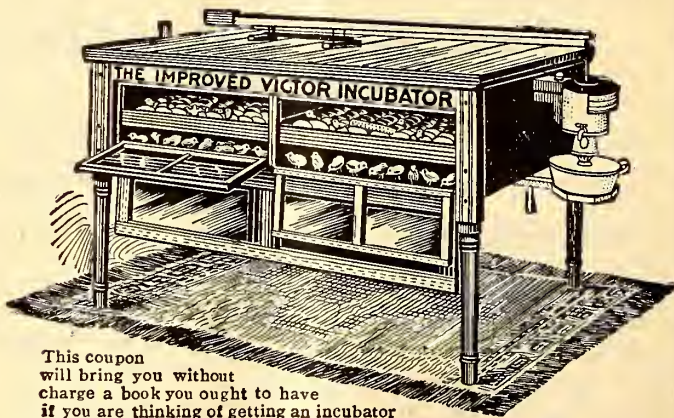

Why not make some money out of your chickens? Why not adopt modern methods now?

WE'LL TELL YOU HOW

Our new book "Incubator Whys" is a mine of information for the chicken raiser. It will help the expert as well as the beginner. Two-thirds of the space is devoted to giving information about the poultry business. The rest tells the truth about the **Victor Incubator and Brooder**. We start with the egg and give pointers that mean profit and increased profit right through to the heavy fowls ready for market. How to make hens lay when eggs are scarcest. How to get chicks when chicks are high. Practical hints that mean money whether you depend on the old hen or an incubator to do the hatching.

BETTER WRITE TODAY.—Use this coupon or a postal-card request is enough if you prefer not to cut the paper. Tell us whether interested in large or small machines.

GEO. ERTEL COMPANY,
 Established 1867. **QUINCY, ILL.**

This coupon will bring you without charge a book you ought to have if you are thinking of getting an incubator or brooder.

You owe it to your pocket to get the information we offer you free for the asking, before you waste money and time experimenting with a cheap incubator. We have been in business over 40 years. Our machines are not experiments. There's a big difference in results between the Victor kind and the cheap kind. A big difference in the profit you will make from a 90 per cent hatch and a 50 per cent one, with the same investment for eggs and oil, and the same amount of worry and time. Let us show you. Clip out this coupon or use a postal and send today before you forget.

GEO. ERTEL CO., Quincy, Ill.

NORTHUP'S MINORCAS SINGLE AND ROSE COMB

Eggs from 80 grand pens guaranteed to hatch regardless of distance. 28-page catalogue free. 68-page book "Minorcas, All varieties," history, mating, fitting for show, etc. Fully illustrated, 25 cents postpaid. My S. C. Minorcas have never lost a special for large size, and have won more than 3,000 prizes for my customers in strong competition. My R. C. Black Minorcas have won more 1st and 2d prizes than all competitors combined at Chicago, Boston, Philadelphia and New York.

GEO. H. NORTHUP, Raceville, Washington Co., N. Y., R. F. D. 6

WHITE WYANDOTTES

At Madison Square Garden, 1905, 1906, 1907, and Boston, 1906 and 1907, birds I bred and raised won nine 1sts, three 2ds, two 3ds, four 4ths, one 5th and one 6th. A record equaled by no other breeder.

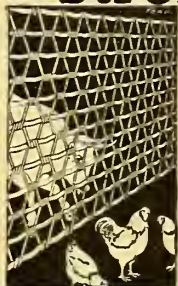

John L. Dakin - - Roxbury, Mass.

FEED, TEN CENTS A BUSHEL

Is your main food for producing eggs and growing young stock costing you more than 10 to 15 cents a bushel? If so, you want my new book, title **Profits in Poultry Keeping Solved**, which tells you how to make this great feed and gives you every detail in laying out and running a poultry plant. Gives you my life time experience. You can save \$25 a year on every 100 hens you feed as well as increase your egg yield 30 to 40 per cent. No mashes under my new system. I have put hundreds of plants on a paying basis and can yours. Write today and stop that big feed bill. Circulars and testimonials free. My second edition of 3000 copies now ready.

EDGAR BRIGGS - Box A, NEW ROCHELLE, N. Y.

Strongest Fence Made

BOX 82 WINCHESTER, INDIANA.

BPR SHOW BIRDS

ARISTOCRAT Winners

My birds are Fancy Show-Birds, line-bred for the express purpose of the show-room. Their ancestors for generations back were bred under my personal supervision with the greatest care, and they are superb. Strong, vigorous, deep-bodied and full-breasted, with magnificent plumage. Snappy colored—deeply, darkly, beautifully blue, and ringy all over. I have

An exceptionally grand lot of Cockerels

This photo shows the exquisite barring of my cockerels.

clean, sharp, exquisitely barred, lusty and vigorous for show and breeding. If you want prize-winners—the best birds that a life-time devoted to this one breed can produce, order some of these splendid birds to head your breeding pens. I can supply you with birds that will take the ribbons.

EGGS

Eggs from my choicest pens are now \$5.00 per setting of 15. Order from me and you will have birds to be proud of, and to make money with. Write for my catalog of these "Aristocrat" Barred Plymouth Rocks. Write today—it's free.

W. D. HOLTEMAN, Fancier,
Box A, Fort Wayne, Indiana

One of my Prize Birds

BARNETT'S S. L. WYANDOTTES

At the Indiana State Fair, 1907, we won 4 prizes on 6 entries. No frosty edging on our cockerels. Cockerels for sale; no females. Circ. free.

E. B. BARNETT & SON
Box 92, Michigantown, Ind.

Barred Ply. Rocks

Have had great results from my cockerel matings headed by sons and brothers to 1st cock and chl. at N. Y., 1907. Breeding stock, March, April and May hatched—pullets \$2 to \$3, chls. \$3 to \$5. Show birds a matter of correspondence. 200 birds for sale

Instructions by mail, at your own home; common education sufficient. More than 41,000 civil service appointments made last year. Write at once, enclosing stamp. Address **National Civil Service School, Jas. L. Wilson, Mgr., Catawba, N. C.**

POULTRY IN THE SOUTH

ON THE LINE OF THE ILLINOIS CENTRAL

The Manufacturer's Record, of Baltimore, Md., is authority for the statement that the poultry products of the South for 1906 reached the enormous sum of \$159,000,000. Of nine leading southern products, with one exception, the poultry crop exceeded them all by several million dollars. The adaptability of the south for the successful raising of poultry for northern winter markets has now been demonstrated, and along the line of the Illinois Central, especially at Hammond, La., flourishing farms are thriving with pleasing results. In Tennessee, Mississippi and Louisiana on the Illinois Central and Yazoo & Mississippi Railroads are natural conditions for poultry raising. The splendid shipping facilities of these roads for reaching important markets, both north and south, should also be considered. For further information, together with illustrated circulars quoting statements from prominent poultry dealers of the south, address the undersigned at Manchester, Iowa.

J. F. MERRY, General Immigration Agent,
Room 13, Hive Block.

MAKE 'EM HUSTLE

Active fowls are egg-layers and money-makers. Keep them interested and expectant. Feed them thro' our

AUTOMATIC POULTRY EXERCISER AND FEEDER

and save yourself worry and anxiety. Filled once a week it is always where they can get food, but only a little at a time, just as nature intended. Three sizes, \$1.00 up. Soon pays for itself. Send for new booklet, telling how to feed fowls economically.

WYANDOTTES

Two thousand head of the most promising youngsters coming on for the fall fairs and winter shows.

CARVER & AVEY

Box A, Columbia City, Indiana

Silver Laced Wyandottes

exclusively. Young stock for sale from our Kansas City, Scranton, Nashville, Indianapolis and Chicago winners. We have the finest lot of chix we ever raised, and can furnish you stock fit to win in any show. Also a fine lot of cocks and hens. Circular. Write your wants.

North Side Poultry Yards, A. & E. Tarbox, Box A-5, Yorkville, Ill.

Consider Yourself!

You want to win at a certain show—you are ready to make an effort. Spending time and money.

Consider W. Wyandottes!

If you want to get into a class where there's competition and where you can luxuriate in quality, as this class has for years proved the most attractive of the show room.

Consider Duston!

Now if you are to show why not be a bit discriminating and buy from the one who can do you GOOD and furnish winners?

Consider Madison Square!

My birds won out at Madison Square last winter, beating out the best this country and Canada could furnish (no limit to money.) Just look up these winnings, and remember this show is no Fall Fair, and that this is the kind of goods that it has taken to "make possible the world's best flocks" and that Duston has for thirteen years furnished winners to great and small, yet publishes no customer's winnings.

Arthur G. Duston :: Box 1020, S. Framingham, Mass.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

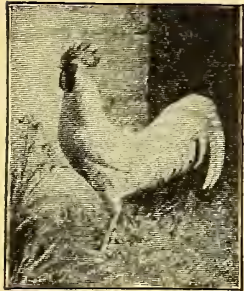

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

BLACK LANGSHANS THE KIND THAT WIN

Have recently purchased the entire stock of Wm. Turnbull, the noted Black Langshan breeder, and I now have **600 choice birds** to offer at prices that will suit. Write at once if you want birds that will win or produce winners for you. Mention American Poultry Journal.

MRS. EVERETT BURNETT**- - - WAVERLY, ILLINOIS**

MRS. JOHNSON'S PRIZE PULLETS

How a Texas Woman is Making a Success of Raising Thoroughbred Poultry with the SURE HATCH INCUBATOR

Among the 140,000 users of the Sure Hatch none is more enthusiastic over its merits and the money-making possibilities of poultry raising than Mrs. J. T. Johnson, of Denton, Texas, R. F. D. No. 1, Box 3. Mrs. Johnson says:

"I will tell you my experience with the Sure Hatch Incubator. It is all right! We showed Buff Rock pullets at Greenville Poultry Show that we hatched in a Sure Hatch Incubator, and won Three Premiums out of Four. I can say 'Hurrah for the Sure Hatch!' I am proud I have one. I expect to get another. I have thoroughbred poultry. I think it pays to have the best. Some people say there is no money in poultry, but I think if they will give it proper attention and manage it in a business-like way, they will find it pays. There are people who make failures of everything they go at and, of course, those will make a failure of poultry raising, because you must look after them.

"I like the Sure Hatch Incubator, because you can set it when you please, and the old hen sets when she gets ready. A good incubator can be run successfully if you use care.

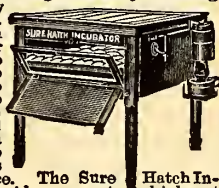

"We are in the poultry business only in a small way, being new beginners, but I am sure there is money in poultry. We expect to increase our poultry plant. There is a good demand for

poultry, and we are in the business to stay.

"People can talk about poultry hatches—I like to see them come off in batches. I like to see them able to run; it's the Sure Hatch that makes the fun!"

Women Make Big Money Raising

Chickens. They enjoy the work. The Sure Hatch makes it easy for them to raise chickens by the hundreds and to sell eggs by the hundreds. There is an unlimited demand, at high prices, for all the poultry and eggs they can produce. The Sure Hatch Incubator hatches the most chicks, at least expense, with greatest ease and most profit possible. Thousands of women credit their entire success in poultry raising to the Sure Hatch. It runs itself with less oil and less attention than any other incubator. A test will prove its merits. Get a Sure Hatch on Unlimited Trial. We pay freight, sell on trial at low prices and guarantee every Sure Hatch for 5 years. Sign the coupon printed below, or send postal, and get the great Free Book, "POULTRY PROFITS"—100 pages, 50 Engravings; over 100 subjects fully covered by expert writers. Tells all about the Sure Hatch. Don't put it off, but take a pencil and DO IT NOW. Book will be sent you by return mail, free, postpaid. Address—SURE HATCH INCUBATOR CO. Box 9, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

Lowest Prices Ever Made on Guaranteed Incubators

MY Ninety-Day Trial and Guaranty is also the strongest ever made on an Incubator. I guarantee it to be of the best material—to be of the best workmanship—to hatch as large a per cent of fertile eggs, and as strong chicks as any other incubator made, no matter what the price. And I fully protect you with my exclusive 90-Day provision. If after 90 days you do not find it exactly as represented, if it proves defective in any way I will remedy the defect or replace the machine with a new one. I stand back of my incubators until they make good. You have a claim on me until you are perfectly satisfied.

Built by
the Man
who
knows

IDEAL Hot-Air and Hot-Water Incubators & Brooders

are made by the man who knows. That's why I can sell them at such low prices. I learned how to make incubators as a practical poultryman with a quarter of a century's experience on my famous Milhook Poultry Farm.

My 128-page free book, "Poultry for Profit," tells all about Ideal Incubators and Brooders, and gives you a lot of general information worth money to you. It is fully illustrated with halftones from actual photographs. Whether you are a beginner or an experienced chicken raiser, it will help you. Just cut out and fill in this coupon with your name and address now before you forget it—send it to me and see how quick this big handsome book will come back to you. Address

HARVEY SEED CO.,

704 Ellicott St.,

Buffalo, N. Y.

Let Us Roof Your Building With Steel at \$1.50 Per 100 Sq. Ft.

Here is your opportunity to get the best roofing at the lowest price. Think of roofing your building with steel at \$1.50 per 100 square feet. You can't afford to bother with shingles. Steel will outlast any other roofing made, absolutely defies fire and water, and reduces cost of insurance. This high-grade steel roofing will go on any kind of a building and you can put it on yourself with a hatchet or hammer. It is also used for ceiling and siding. It comes to you straight from our own factory.

Flat, semi-hardened steel roofing, Grade 6, in sheets 24x24 inches, \$1.50 per 100 square feet. Corrugated as shown in illustration, sheets 22x24 inches, \$1.65. Corrugated sheets 6 and 8 feet long, \$1.95 per 100 square feet. We also offer you the best and the least expensive improvement for the interior of offices, kitchens, stores, restaurants, etc., a metal ceiling, and it actually costs less to have a steel ceiling than to go without. No loose plaster to fall, always clean and artistic.

METAL CEILING, \$1.95

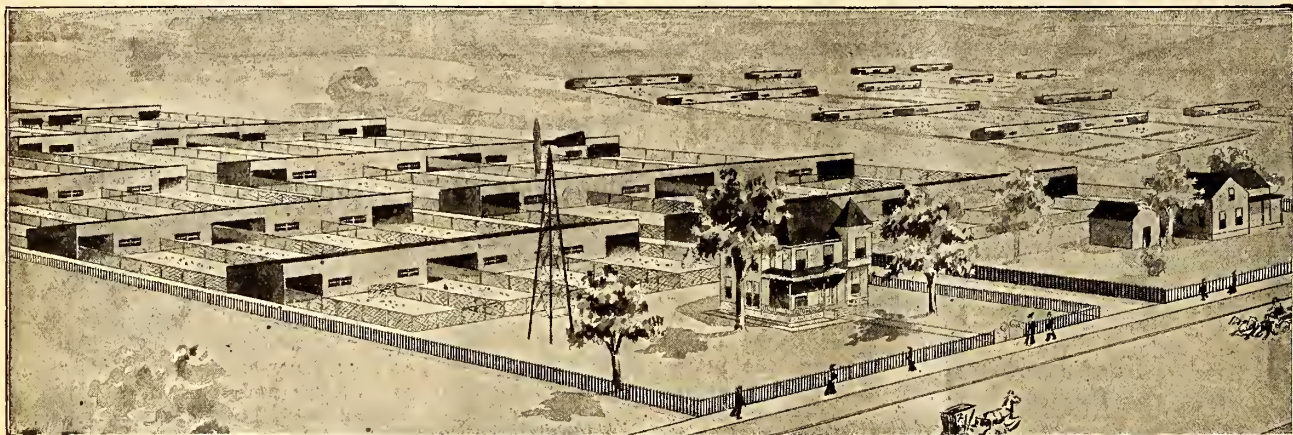

We will supply you with a fine, ceiling, as shown in illustration, all put up at 100 square feet, in sheets 24 wide and 6 long. They are excellent. Nothing up an old more than some brick makes the weather-worn structure look like new, gives an air of solidity and prolongs its life many years. Our brick siding is adapted to any kind of building, residences, business blocks, churches, hotels or barns. A few

dollars invested in brick siding will add hundreds to the real estate value of any structure, and it is the most economical finish for a new building. We supply brick siding in sheets 24x48 inches. All our steel roofing, ceiling and brick siding is nicely painted red on both sides. Shipments at our expense. We pay all freight charges on all orders for steel roofing, beaded ceiling and brick siding to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. Prices in these states furnished on request. We manufacture V Crimp and Standing Seam Roofing. We also furnish galvanized conductor pipe, eave trough, iron

BRICK SIDING, \$1.95

pipe and fittings, plumbing supplies, nails, etc. Guarantee is back of all we sell.

Crescent Poultry Farm, Des Moines, Iowa. Frank Foy, Proprietor.

BIG MONEY IN POULTRY

My big poultry book tells how to make it. Also how to feed, breed, grow and market your poultry for best results. Plans for houses, diseases and cures. This book probably gives more reliable information about the poultry business drawn from actual experience than any book of the kind published. It contains many new illustrations of fowls drawn by the world's greatest artist, I. W. Burgess of Indianapolis. Tells all about raising poultry for profit, feeding for eggs, broiler raising, artificial incubation, and contains many new interesting articles. Illustrates and describes the largest pure bred poultry farm in the country. It also describes and illustrates all the leading varieties of pure bred fowls, pigeons for squab raising, tells all about Frank Foy Incubators and Brooders, and quotes extremely low prices on pure bred fowls and eggs for hatching. Mailed to any address for 4c in stamps.

SLEEPY EYE POULTRY AND CHICK FOODS

Successful poultry-raisers are particular about the feeds they use. They have learned that profit or loss depend more upon feed than upon breed. Hundreds of the most successful ones have adopted **Sleepy Eye Foods** because they bring the profit. They are scientifically prepared, by an exact and never varying formula, from the choicest grains, seeds, etc., to meet the needs of poultry-raisers everywhere. They are properly proportioned and balanced, and are fed dry without loss or waste. The **Poultry Food** helps hens lay lots of eggs, prepares pullets for early layers, puts market birds in shape to bring top-notch prices, and keeps the whole flock healthy and prosperous. The **Chick Food** starts little chicks in life with vigorous constitutions and keeps them growing. If you want more profit, feed "**Sleepy Eye.**" Write today for circular and free samples of foods. Which is Best?

Moisture or Non-Moisture Incubators

THIS photograph tells the story. It is like all other evidences of actual results. It makes theories pale into insignificance, for you can't go back of results that come from actual test. Here is shown a difference of 100 percent in favor of the moisture machine.

The chicks on the left were hatched without moisture, those on the right with moisture. Notice the difference, not only in number, but brightness, vitality, of the moisture-hatched chicks. Who hatched them? Some one working in the interests of the "common good," and for the sole purpose of determining the truths concerning artificial incubation for the benefit of all.

This test, with many others, was made at the Utah Agricultural College by Mr. Jas. Dryden, full reports of which are given in Bulletin No. 102, published by that Station. The main features of these important experiments are also reprinted in our 1908 catalog, for they embody some very valuable information.

These and other experiments prove conclusively that the Prairie State Sand Tray Incubator is the most successful hatcher on the market today. While others have been following theories, we have been following nature and the

practical things. It brings off chicks like those on the right, because it works on hard-headed, common sense principles that have been proven, not alone by us, but by men high in the business—men who have been making artificial incubation a life study. It gives best results, and that's what the buyer wants. Moisture is supplied by using a shallow pan filled with wet sand.

Prof. Atwood, of Morgantown, W. Va., stated in a recent address that the shallow pan of wet sand on the bottom had given them larger and stronger chicks than the non-moisture machines.

The Prairie State Sand Tray Incubator is not an experiment, but the result of twenty-seven years' continued effort and experience. While we do not claim to have solved all the problems of incubation, we do claim and prove by results that we have the most perfect solution of artificial incubation, and the most successful machines on the market.

When men like Dr. N. W. Sanborn, one of the best known, practical poultry authorities writes, unsolicited, a letter like the following, it certainly shows that the Sand Tray Prairie State is the best machine for you.

BOSTON SHOW, 1907.

SANBORN

BUFF WYANDOTTES.

DR. N. W. SANBORN.

THE SANBORN METHOD.

Labor and money saving methods of handling poultry, along modern lines. Instruction for one year's work with money-making hens. Incubators, brooders, chicks and old stock—nothing omitted. Lessons now complete in a single volume for one dollar.

BELLINGHAM, MASS. November 6, 1907.

Dear Mr. Mix:-

You will be interested in results with one of your new style, 1907, sand-tray incubators.

Prairie State incubators have always had a reputation of being equal to any made, but in this new style you have certainly forged ahead. The large egg chamber appealed to my judgment as of great practical use, that wet sand tray took from my mind any anxiety as to proper moisture, and the close fitting egg tray allowed me to dry off my chicks without dropping into the lower part of the machine.

That your incubators hatch chicks of show quality is plain to me, as I have sold more Buff Wyandottes this fall that have won the blue ribbon than ever before. The chicks came out of the machine big, fluffy and sprightly, and grew right along into show room condition. I see nothing to improve in this 1907 incubator.

Truly yours,

N. W. Sanborn, M. D.

(FARM POULTRY DOCTOR)

Send for our new 1908 catalog, and if you don't find more valuable, interesting and down-to-date Incubator and Brooder information yet published, we'll take off our hat to the other fellow. It tells all about recent experiments—photo illustrations of tests, describes clearly the principles involved, and above all, the why and wherefore, the reasons and actual proofs why the Prairie State is the incubator to buy. Why take chances. Send for catalog to-day.

Johnson Says

INCUBATOR MAN

To Tell You that He Has Been
Grand Daddy to More Than Half
a Billion (500,000,000) Chicks.

Johnson says if you don't believe it, go and count 'em.

He made the incubators—the incubators hatched the chicks, and if that doesn't make him their grand daddy, what does it do?

The fact is that Johnson has sold more incubators direct to the user in the past 14 years than any other man in America. Not because he is Johnson, but because he knows how to build an incubator that really does the work and really satisfies the user. His famous

“Old Trusty” Incubator

is sold on a positive guaranty to be absolutely automatic, to maintain an even temperature in every part of the egg chamber and to give hatches of 75% and better, to consume less oil and give less bother, than any other incubator in the world.

It is doing that in the hands of more than 100,000 poultry raisers in all parts of the world and it will do it for you. Johnson pays the freight and will send you an “Old Trusty” on

40, 60, or 90 Days Trial

with as strong a guaranty back of it as it is possible to write.

“Old Trusty” is built of exceptionally good materials, but Johnson sells them direct and will save you money on a really high-grade machine. Moreover he stands ready to help his customers every step of the way.

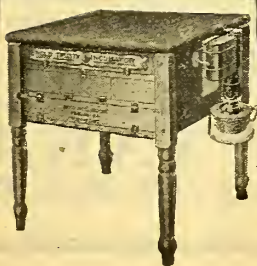

No matter where you live or what kind of poultry you raise, how many chicks or how few you want to hatch, you will be interested in the “Old Trusty” proposition.

Johnson can make prompt shipments and quick deliveries. Write to him today.

Get Johnson's Big Book

A poultry book by a man who knows. 176 pages, every page a poultry sermon. 300 pictures, many of them scenes in foreign lands showing the good work “Old Trusty” does across the seas. It is a book you will be glad to get, glad to read and glad to keep.

BICKERDIKE'S

Pedigreed White Rocks

At the Illinois State Fair, 1907, "The Greatest Fair on Earth," in very strong competition with 110 White Rocks in the class, representing the leading strains of the country, our "WINNERS AND LAYERS"

WON ELEVEN RIBBONS OUT OF FIFTEEN

1st, 2d and 3d cock, 2d and 3d hen, 2d and 3d cockerel, 1st and 3d pullet, 1st and 2d pen, Convincing proof that we have quality to win. Exhibition birds or breeding stock for sale. Write for prices and free catalogue.

J. A. BICKERDIKE :: Box A, MILLERSVILLE, ILL.

COLUMBIAN WYANDOTTES

THE FOWL THAT IS MAKING THINGS HUM IN THE POULTRY WORLD

In 1906 and 1907 our birds won special for best collection at Madison Square Garden. This fall a number of state fair prizes, East and West, have been won by birds from our yards, and at such shows as Jamestown Exposition, Trenton and Hagerstown, quite a number of the blue ribbons have been won by birds from our yards. Some of these winners will make people talk for years to come. We have by far the best lot of young birds this fall we ever had; lots of old and young birds for sale at right prices if taken soon. Our matings this season will be wonders. Our cheapest yards will be headed by such males as 1st and special chl., Chicago, 1907, and others, with brothers of the most noted males ever seen in this country. Such birds as Teddy Jr. go down to the cheapest yards. Pens will be mated early; eggs for sale any time after Dec. 20th. We shall have cockerels heading our best pens that are valued away up. No such birds have ever been seen before this season. Get your orders in early.

MANAGEMENT OF BREEDING STOCK.

The Folly of Breeding From Immature Stock—Mating Stock for a Purpose— Mating for Size.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Me.

This month virtually begins the breeding season for most fanciers, and when the stock have been bred under normal conditions, it should be in excellent condition to choose from now, the birds from which the next season's output is to come from.

It is, however, necessary to dwell on the fact that a very bad past season has thrown out of the normal condition very many fanciers' flocks, and December finds him with a number of immature birds on his hands, still hoping and in a good many instances against hope that the birds will still come to maturity at a later date.

This, however, will not take place in all cases. June hatched chickens, if proper care was given them and the weather was favorable during November, will at this time be of fairly good size, but they will not, except in individual instances, approach the size and shape and rounded out maturity of the earlier hatched birds.

Nor will they begin to lay until late in January, if then, for to make June hatched birds to lay in January, good housing, good feeding, and in every way extra good care is necessary, and it would not even be wise to force an earlier laying period, for then the end would come quicker to any further growth, which, though very much slower in winter, is still going on.

Where there is plenty chance to do so much may be accomplished by changing the late hatched pullets from house to house. It keeps them active and delays laying, which in the case of the fancier who is more anxious for the attainment of proper size than a few small eggs laid by an immature pullet and made to do so by forcing, is very much to be desired.

A continuous change of food will also result in continuous growth, but all the time let it be remembered that growth goes on very slowly at this time of the year. The late hatched chickens will push out of season to get ready for winter, and you can readily notice the mature look in both pullets and cockerels when only weighing from two to three pounds. It is nature's way and except summer conditions can be prolonged very little can be done for late hatched chickens so as to make them fit breeders.

Personally we would not use June birds for breeders. It is bad enough to use pullets for breeders at any time, though a fully mature pullet will make a fairly good breeder, but where any measure of success is expected a late hatched brood should never be used except where a case of necessity prevails.

When such, however, is the case, then select the largest birds, not the largest by weight, but the largest in framework, and mate them to a full sized two-year-old cock bird, and only a small number, not over five or six, and a pen made up of four of these females would still be much better.

Use none of the eggs for incubation purposes until the pen has been in full lay for several weeks; in fact, best results from such a pen will be obtained by waiting till late March or early April and even later before using any of the eggs for hatching.

The observant fancier will have noted that the eggs are very small and not of the normal size of the breed, and if started to hatch he will also find that the germ is small and

imperfect, and that many of the eggs are infertile and many more will start to develop and in a few days nothing is visible except the fatal red ring that denotes failure of complete impregnation.

Don't force for eggs, which is another fatal mistake and sometimes done unintentionally by the breeder by wrong ideas of what constitutes a proper ration for a breeding pen.

Give nothing but hard grain, beef scraps, green food, grit, shells and water, and keep the flock active in the day and warm at night.

It makes good red blood and this is necessary to perfect health, where there is plenty of room for exercise, and particularly so in the case of these late hatched birds.

Now let it be remembered that these lines were only written to help out those who cannot or will not do the next thing, namely, get proper breeding stock or perhaps those who by belated hatches have been forced into the necessity to keep up work on a strain that by waiting another season would be much delay; but in either case it would be better to begin all over again, for it is slow work to perfect anything in either man, beast or bird with stunted specimens.

Again let me say that the above mating is very apt to give you some good sized cockerels, but small pullets, for it is almost a positive fact that the offspring of any mating will not blend readily, but the females will take after the dam and the males after the sire, a fact which it is well worth your attention to take into consideration in all of your matings.

Mating Stock for a Purpose.

There are some facts and guiding principles in connection with the proper mating of breeding stock which every breeder should fully understand before selection of stock is made.

And where the breeder has a complete knowledge of the different pedigrees of his birds, it will as a consequence much facilitate matters, and any thoroughbred fancier always has a purpose in view when mating his birds, and though in his advertising may say "the best in the world" he knows full well that it is only the best in a limited sense, for we have no breed of any kind that cannot be made better; in fact, the great drawback to the fancy is the hurry in bringing before the public strains that are no strains and breeds that are not breeds, for they will never be entitled to the name till they breed true to the different requirements; and a strain is never a strain until it differs in one or more particulars from other strains by having been bred so long with the view of making it so clearly marked that it becomes the peculiar property of this same strain; and until such a purpose is manifest and permanently fastened there is no strain, but simply the common properties of all breeds and all varieties that one has in common with another.

It is, of course, true that to keep these artificially made breeds and varieties from degeneration care in selection must be maintained, so as to increase or to fix the desired qualities of an existing breed until they become well established or what we generally mean when we say that a variety breeds true to color or characteristics.

But this has been done by a number of noted breeders of almost all of our older breeds, and their strains breed true and up to standard requirements in such a large proportion that they may be called permanently fixed.

But to quote a very common instance and of common occurrence, one would-be fancier gets a few birds from one breeder and a few more birds from another breeder. He amalgamates the two different strains of blood and in a little while, sometimes only after a season's work, comes out over his own signature with "The Sunset Strain," and if this

stands for anything it stands for the ruination of twenty or more years' work, that either one of these breeders from whom he got his stock had expended in the perfecting of one or more desirable qualities.

But suppose again that this person had bought his foundation stock from one of these breeders and where he could place his order with confidence that the stock would be as

First premium pullet at Tennessee State Fair, 1907. Score 97. Conceded to be one of the most typical White Wyandotte females in America. Owned by Fount H. Rion, at Maple Lawn Poultry Yards, 1412 Eastland avenue, Nashville, Tenn.

represented, for if in ignorance of the strain and its possibilities it would be better to have the breeder made up for good results, and if it should happen to be a laced or spangled variety he best keep still and not make any complaints if the birds purchased should not satisfy his eye as far as lacing was concerned, for two perfectly laced birds of some varieties will never produce well laced chicks, and here is the reason for this warning.

But again, after breeding the strain he has purchased for a season or more and he finds that some desirable features do not materialize so as to suit him, he will, if wise, communicate with the breeder from whom he got his foundation stock and try to get in one bird that he is after, and if after another season's work he sees improvement he is on the right track and success will be more sure, but if he finds that the same trouble is still in evidence and the breed in other points gives him satisfaction, he may do the next thing, try to get what he wants from some other strain, and by careful introduction make it permanent in the strain he first had; but now observe, that making permanent a feature that was not present in any of the strains or at least not thoroughly fixed, he has made a strain of his own, but the same thing would have taken place if he had been able to keep to the first strain of birds, for by selection he would have changed the strain into a better one than first came to his hands, and by force of hard work and careful manipulation would have made it his own, very much in the way of any other improvement. Franklin, for instance, could not claim any of our modern inventions, but he is certainly the father of a good many of them, yet the inventor gets the credit and he is fully entitled to it.

Such strain-building may take years, perhaps the best years of a fancier's life. It is not accomplished in a year or in two or three, and it is simply to court failure and ridicule to call a strain a strain where there is nothing in particular that makes it stand out prominent in comparison with other strains.

Mating for Size.

It has been a generally accepted statement and is now among a good many fanciers whose observational powers are not of the keenest that the dam largely if not wholly influences the size.

If it was invariably true that "like produces like," the

subject of mating would be reduced to a very simple proposition, but with artificially produced animals, as almost all domesticated animals are, this rule has so many exceptions that it can only be regarded as the best of many very uncertain rules.

The mouse, the hare, the sparrow, the partridge and the eagle produce fac-similes of themselves with great certainty.

But when we have greatly altered the natural features of an animal by subjecting it to artificial treatment and by taking advantage of occasional sorts or rare exceptional individuals have produced and selected a succession of descendants widely differing from the original stock, there will be in animals so bred a constant tendency to produce a progeny more or less unlike themselves and like the stock from which they originally descended.

As a rule, this tendency will be stronger or weaker, first, in proportion to the extent of departure that has been effected from the characteristics of the original race; and, secondly, in proportion to the more or less recent date of the transformation.

Thus if you put in your breeding pen a fifteen pound Brahma or a ten ounce Bantam, the departure from the natural size of their original parents has been so great that you will probably not get one out of a hundred of their progeny to equal the unusually large or small birds from which you are breeding, but with a ten pound Brahma or a twenty ounce Bantam you would have no difficulty in getting a large percentage of your output up to the required size of either the heavy or the light weight bird.

But the probability of obtaining very large or very small fowls from either would greatly depend upon whether your birds had been bred very large or very small for many generations, or were themselves merely accidental and violent exceptions from their immediate parentage.

In the former case they would be sure to exert a great influence in the direction of their own size on their progeny. In the latter they would exert scarcely any more influence in that direction than their common sized parents or brood-fellows would have done, and far less than would be effected by very moderate sized birds that had for generations been bred from very large or very small stock.

It thus becomes essential to any prospect of success that you should know not merely what your present breeding stock is, but how long any desired characteristics have been maintained in their parentage.

The finest birds that grace our show pens may be and often are utterly worthless for breeding purposes, and it is

First prize Light Brahma hen at Indianapolis, February, 1907. Owned by E. J. Barker, Thorntown, Ind.

even more necessary to know what your stock is bred from than to know what the birds are themselves.

It is hopeless to try to get size in birds that have been produced from a strain of birds in which the size is deficient, and all the care of an early hatched and well nourished

A "FISHEL" WHITE PLYMOUTH ROCK.

A prize-winning cockerel in the yards of U. R. Fishel, Hope, Ind., home of the "world's best" Plymouth Rocks.

brood will only result in about the same size of stock from which the eggs came.

While, on the other hand, a late hatched bird that lacks somewhat in size, but lacks only in size because the season shortened up the growth, she still has the latent propensity to the size of her parents strongly implanted in her, and when mated to a cock of the ordinary size of the strain from which she came will produce good sized specimens; but of course such procedure cannot be carried on indefinitely without causing bad results in the maintenance of size. This is only an accidental variation that may be used if necessary for a season, but it is even here far better, except when it becomes absolutely necessary, as has already been stated, never to use an undersized bird in the breeding pen, particularly so in a breed where size is one of the chief characteristics.

In mating a pen of birds in such a way that size will be maintained select only mature birds for propagation of the race, and note the fact that blendings of both sire and dam does not often take place.

The son will take after his sire, the daughter after her dam, and sometimes but not often the daughter will take after the sire and the son after the dam. Seldom is there a complete blending of characteristics of both dam and sire, for if there were some breeds would be impossible of any breeding to type, as is well seen in the variety where plumage in the male is entirely different from the plumage of the female.

The first case is the most common. If the hens are large in size they will give their size to the female output, and if they have been bred to a smallish male bird the male output will in the large majority take their size from their sire.

The knowledge of this law is a valuable adjunct to the breeder of fancy poultry, and really is the means whereby any improvement is made, not only in size, but in all other characteristics, though in the pigmentation of the plumage another law operates, for it is a well known fact that two strong pure colors do not produce as good colored offspring as where one of the parents is seemingly defective in this respect.

So in mating for size it is well to have large and fully matured birds on both sides, for this is the only way in which size can be maintained in both the male and the female line. It is not necessary to have two lines in any strain as far as size is concerned.

Strong robust health must of course be one of the essentials, for birds that lack in this particular will not assimilate enough nourishment to make the necessary framework of the building on which size depends entirely, for size is one thing and weight is another. I have had birds that were spare in flesh, in fact poor, that would weigh what the standard required, and why? Because they had the framework and not an accumulation of fat deposit which to the tyro generally is taken for size, because it is up in weight; and I firmly believe that the score card is largely to blame for the fatty condition of small-framed birds that by being plumb-fat will come up to standard requirements, where a much larger framed bird that the owner did not care to make worthless as a breeder lacks a few ounces in weight which could at any time easily have been more than fully attained.

PREPARING FOWLS FOR THE SHOW ROOM.

Written for American Poultry Journal by W. W. Kulp, Pottstown, Pa.

All fowls show their very best when in the very best of health. The first requisite is to so rear and treat the birds that they will be in perfect health. To do this is to rear them in full liberty. Birds can be raised in small inclosures, but the usual results are far from perfect physical bodies. Apple orchards or part grass and part shade is the ideal run.

There is no other treatment as far as getting a perfect growth but liberty and three full feeds a day.

The next step is to overcome the wildness. Birds reared in the open, especially the smaller breeds, are quite fearful of man when first penned that they take all positions but the natural. I begin to handle them when half grown. I strew the corn around my feet when feeding, or if that will not bring them near enough to pick up I throw some in a nearby angle of the fence. After a half dozen handlings they begin to see no harm is coming and half the battle is won. This I continue until they are full grown, taking them into a coop a few times to accustom them to it, as well as persons.

When the time comes to ship I see that the feet are clean. If Barred Rocks I have at times washed them, depending how

clean they are. Brown Leghorns I never wash. I use a clean cloth to wipe well the whole body. I always feed a special condition powder I discovered to fortify them against taking colds and roup. It does the work, too.

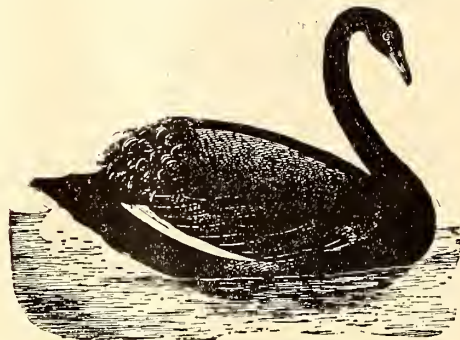

At times the combs of the Single Comb Leghorn females are too small from moulting or age and I bring them into a warm room for twenty-four or forty-eight hours, as the case may require. The Rose Combs never need such treatment. They often need the opposite treatment—cold and starvation—but that will destroy the luster of the plumage and the general looks, therefore it is seldom done.

The next job is to wash the white breeds. Have two or three washtubs half full of water as warm as a bird can well stand it. Have some one to hold it by the feet, so you have your two hands to do the washing. I take a small dish brush and with plenty of Ivory soap thoroughly wash them all over. You need not fear to make them look as if they would never come back to nice feathers, for they will if you get all the soap out again. When you are sure, be very sure, you have the dirt all out, begin to rinse.

Use the first tub until you think you have all out you can get with it, then use the second, putting a little bluing in it. Rinse about twice as much as you think necessary, and you must be sure the soap is all out, if you must take another water, for on this will depend the looks of the fowls when dry. I take two towels and get all the water out I can with them, but do not rub the feathers too much.

Have ready clean coops in a warm room. If the weather is cold do not fear to have them near the fire, for you can judge by yourself, if you were so wet, you would want plenty of heat, yet you do not want them to get so warm that it will bring out oil on the white feathers.

You will have to look after them to see that none are hold-

BLACK SWAN.

Bred and owned by Golden West Duck Ranch, Joliet, Ill.

ing their tails in a corner, for they will be crooked. I had a White Rock I was preparing for Madison Square dry its tail crooked. And it had to stay crooked, for it was too late to do anything. Of course I lost even a chance to win. I saw birds at West Chester one year that were not washed clean and were full of soap. You may well guess the washing was worse than wasted, for they would have looked better not washed.

I once washed a pen of White Rocks and put them in a house with a sand floor. It was years ago, let me say, for my credit. The hens promptly took another bath, but one more to their liking. They looked pretty red. So you must be mindful where you put them after you wash them.

If there is much at stake it is well to have some one with them all the time. As soon as they soil any part of the coop it can be removed at once. This preparing of white fowls for the show is one objection to white birds. It is too much of a task for me, and I have not shown many whites in the last six years. One of my men is a good hand at it, and has prepared a number of White Wyandottes, but the White Leghorns have had to stay at home many times because of the washing.

The last thing is banding, or the first, whenever you wish to do it. Better put a sealed band on them, and keep an exact record of them. Sometimes white birds are so clean they can be shown without tubbing them. This is true for local shows, but for the big ones do not risk it.

Bear in mind that in poultry-keeping attention to details is of the utmost importance, for if the little things are neglected, failure will surely result.

The drinking water should have the chill taken off during cold weather.

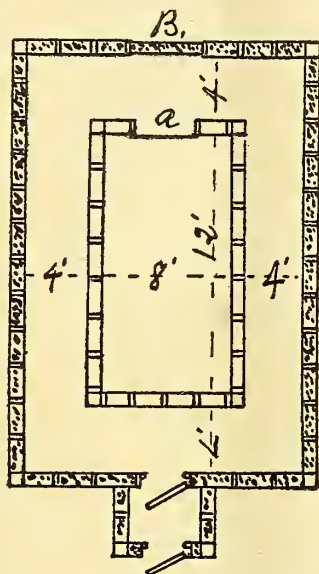

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded J. E. Bridgman, Lamar, Mo., and the second prize to Horace Pratt, Lawrence, Mass.

COLD STORAGE.

The only really satisfactory means for keeping eggs and poultry meat is cold storage. The system is working a revolution in the trade, tending to equalize prices and in-

GROUND PLAN

SECTION

crease demand. In course of time the difference between spring and winter prices will no doubt be far less than at present. Meanwhile there is a good profit in holding stored eggs. A commission man and buyer lately remarked to the writer that farmers and poultrymen could secure this profit themselves by putting up small storage plants on the plan of co-operative creameries, and selling the product at the right season to the retail trade. This design for a storage plant has been successfully used, so it is not a theory, but a

practical proposition. A town of one thousand or more people would furnish ample scope for an enterprise of this kind. And the crop of ice is often found at the farmer's very door. As with many other gifts of nature, however, its very abundance causes it to be disregarded. The plant here shown could be used a part of the time for fruit, etc. The plan is for storage, which, of course, is not expensive and is now in successful operation. The ice room is 8 by 12 in the clear, being started with a 6 by 6 inch sill laid in a trench three inches deep. After sill is laid in the ground, dirt is pressed in solidly, so as to leave no opportunity for air to enter in at the bottom—a very important point. The studding of the inner room is 2 by 8, 12 feet long, set 24 inches from center to center, having a plate same size spiked on top, the inside of the studs being sheathed with any rough lumber clear to the top, except at A, where one stud has been left out, leaving an opening through which ice is passed while filling the house. This opening is stopped with boards simply laid in as the house is filled. The top of the ice should be no higher than the plate and be covered at least eighteen inches deep with hay, straw or sawdust well packed down. The outer wall is of 2 by 4 studding, 12 feet long, set in the ground same as the inner room, but carefully sheathed on both sides with good, tight boards, and the space filled with sawdust clear to the plate. The outside is finished with drop siding, having a thickness of heavy tar paper between siding and boards. At B the inner sheathing boards project $1\frac{1}{2}$ inches beyond the studs, and other loose boards are cut to fit between the studs. When the ice is all in these boards are laid up and the space between tightly filled with sawdust. This opening is used only to fill ice chamber. About thirty-five tons of ice can be put in this house, which will be sufficient to last until cutting time another year. The entrance door is double; that is, a vestibule is built out so that door can be closed when coming out, thus avoiding warm currents of air in the cooling room. The four foot space for storage should be floored over six inches above ground sill. This provides ample room for meat, butter, eggs, fruit, etc. It is well to remember that eggs must not be held at a lower temperature than 40 degrees above zero. Roof is hipped and provided with a ventilator with slats arranged to open or close at will, but should never be closed tight as fresh air should always have more or less access to the top of the ice. The roof is covered with felt roofing and entire building should be painted white two or three coats. The cornice is made with 8 by 8 inch holes in the soffit and provided with a board to close and open, thus perfecting the ventilating arrangement. Windows on both sides are tightly fitted with double sash and set so as to light the end passages. A box drain C is laid in the ground, made of 2 by 8 inch stuff and should project four feet beyond the outside wall. At each end a pit should be dug and filled nearly to the top with small stone, then an armful of straw. Fill last five or six inches with dirt well rammed down. Use no flooring in the ice chamber. Lay the ice on the ground.

Lamar, Mo.

J. E. Bridgman.

MONGRELS VS. STANDARD BRED POULTRY.

The present high prices of eggs and poultry will undoubtedly have a tendency to bring many beginners into the poultry world.

The first question confronting a beginner will be: What kind of poultry will be the most advantageous to keep?

To these I will say: Start right; do not be persuaded to buy mongrels for the following reasons:

First—It does not cost any more to feed standard bred birds than mongrels.

Second—There is nothing as pleasing to the eye as a flock of birds of one variety.

Third—Standard bred birds will lay as many eggs as mongrels under the same conditions.

Fourth—Eggs from standard bred birds will bring an equal price for the market and a much higher price for hatching.

Fifth—Surplus cockerels or pullets of a standard breed find a ready market at a good price.

For a stated sum from a dealer you will get quantity when buying mongrels and quality when buying standard stock. It will cost more to start with birds bred to standard requirements, but the results will show that an increased expenditure for standard birds in the beginning will prove in the end to have been the more economical course.

When you keep poultry you should look for something in the way of pecuniary recompense; the pleasure received to be thrown in for good measure.

You may have heard of this or that cross breed your

grandfather used to keep as being the best layers in the world. As an illustration we will take one of the most practical crosses of today. That is the Leghorn male on light female Brahma. It is a well established fact that the Leghorn hen is the egg machine to date and that the Brahma is a bird which looks well on the Christmas dinner table. Knowing the predominant characteristics of these two breeds, we will say as a figure that the Leghorn hen lays 200 eggs in a year and the Brahma, being a meaty, lays but 150 eggs per year.

The result obtained by crossing the two is that we weaken the laying qualities of the Leghorn as the pullets from this cross will lay on an average 175 eggs per year, and that in the result some of the good table qualities of the Brahmas are lost.

Eventually nothing is gained. Whatever gain there may

sufficiently large number of standard breeds, so that any one may select a breed suited to his or her ideas.

In conclusion I say: Do not let anyone persuade you that mongrels will lay better than straight breeds if you are looking for laying qualities, because by a process of selection the fancier breeds his birds so as to lay more eggs each year. The sale of hatching eggs are a profitable and by no means small part of his income, so they cannot lay too many for him. By breeding from his best at all times, best in color, size, shape and healthfulness, this process of selection results in a finer quality in every way.

It will readily be seen he has at all times the interest necessary and by study and care evolves as nearly as possible a perfect bird. This study and care is seldom devoted to a flock of mongrel fowl.

Lawrence, Mass.

Horace Pratt.

be in one is lost in another by this cross breeding. It is often asserted that some certain person is getting more eggs from a flock of mongrels than a certain other person is getting from a flock of the standard bred birds of the same size. This may often be true, but it is not the fault of the birds. Look into the conditions under which both are kept. No birds, whether mongrel or standard breeds, will lay well if not properly looked after. I mean by this that they must have good housing, good feed and good care before you can expect good results from any birds, mongrels or standard breed.

Give your fowls a variety of feed of choice grains and good, wholesome mash, and you will always have eggs in your basket all the year round. Let the beginner take for his breed the one he likes best, for that is the breed he will take the most pride in and care for the best. You will not have any pride in your birds or give them the proper care if for any reason you do not like the breed. There is a

WINTER EGGS.

Written for American Poultry Journal by Will L. Clark, Sullivan, Ohio.

There is perhaps no other subject of more importance and which is deserving of more attention by both poultry keeper and poultry writer than that of winter egg production.

It is also a subject that has been very sadly neglected by a large majority of poultry keepers, but more particularly by the farming class.

To produce the maximum limit of eggs in winter there are four all important points which must not be overlooked. And they are: First, fowls from a good laying strain; second, pullets well raised; third, comfortable quarters, and, fourth, proper care and feed.

Much more depends upon the strain than upon the breed as regards egg production. To make this plain I have in

"ROYAL ARMO."

S. C. Black Orpington cock owned by B. F. Dudding, M. D., Hope, Ind. This cock will head Pen No. 2 at our breeding yards for 1908.

mind two poultrymen who keep the same breed of fowls and both pure bred. The one lot are strong, active, large and healthy and are always ready to begin laying by early winter. The other lot are undersize and are lacking in constitutional vigor. And when winter comes a great many of them are not in a condition to begin laying.

This shows the difference that is sometimes found in different strains of the same breeds. March and April hatched pullets, if they have been properly raised, make the most satisfactory winter layers. They should be fed a variety of muscle forming foods, and be allowed free range during the entire summer, where they can enjoy both shade and sunshine as they desire.

About a month before they are expected to begin laying, those of a uniform age should be placed in quarters where they are to remain during the winter. Nothing older than yearling hens should ever be retained in a special pen of winter layers. And then only those which have moulted

after the following manner, and which may be varied in size according to the number of fowls kept.

Let the roosting and laying room face the south, with door and windows of sufficient size to admit plenty of light and sunshine, and see that it is located where no other building will cast a shadow on it during any part of the day. Place the roosts along the north side, with dropping boards beneath them. These boards should be just high enough from the floor to permit the nests to be placed conveniently under them, thus leaving as much available floor space as possible.

On the east side of this room should be a scratching room, which is so constructed that it may be thrown open in front except at night and on extremely cold and stormy days, when it should be closed with a large canvas covered door. This will admit plenty of light and pure air and exclude storm and wind. A screen door should also be provided here to confine the runs when the front is open, but on account of storm or deep snow they are required to remain inside as they will be much better off confined at such times if kept busy working and scratching in litter.

A curtain should also be suspended from the roof in front of the roosts and dropped down to a level with the dropping boards after the fowls have gone to roost. This should only be done on extremely cold nights; and in the morning rolled up out of the way.

The floors of both rooms should be well covered with straw or some other good scratching material, and this should be removed and replaced with new as often as is necessary to keep it clean and dry. And now comes that much discussed question of ventilation. While I believe that ventilation is necessary, still I do not think it good judgment to cut openings directly through to the outside elements and thereby admit so much of the cold that we have been to so much expense and pains in trying to exclude.

My plan of ventilation is this, and it has always proven very satisfactory: It will be noted that the scratching room, arranged and managed as I have described, will always contain an abundance of fresh air. Now if a hole about 10x12 inches be cut through the partition close to the floor to allow the hens to pass from one room to the other, and another of equal size be cut through near the roof, this will make ample provision for ventilation in cold weather, and in moderate weather a door opening through near the front of the partition may be left open. In this way plenty of pure air is supplied without the objectional cold draughts which are so dangerous to poultry. It has been wisely said, "There's as much in the feed as there is in the breed."

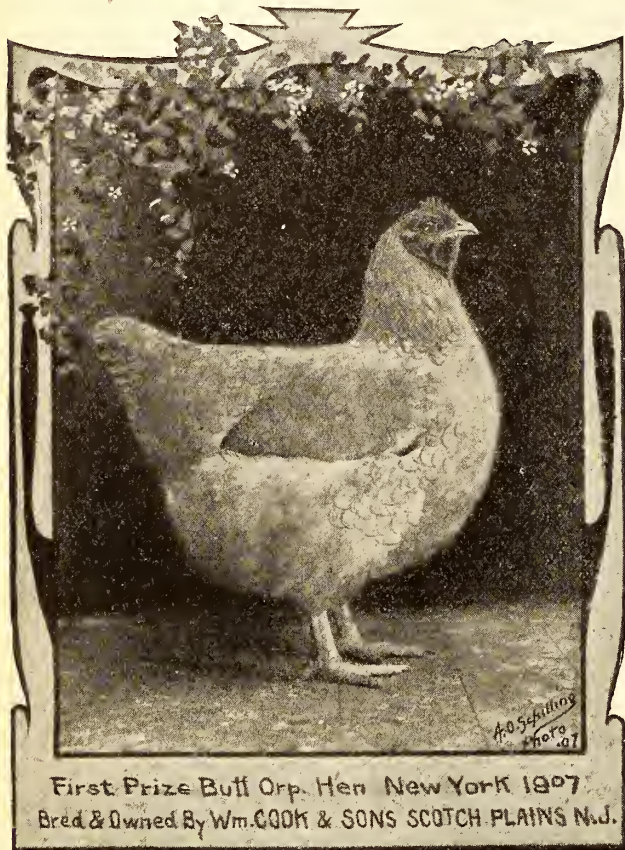

This is very true. There is a great deal in both. The best laying strains cannot produce satisfactory egg yields unless they are supplied with proper food and care. I have heard the expression of forcing hens to lay. This I claim to be a very improper expression. It is natural for hens to lay eggs, and all that anyone can do is to make conditions so favorable that nature is assisted to the greatest degree in carrying out its work.

A variety of food, and especially that rich in albumen, must be given. This ingredient is best supplied through some kind of meat food. Green cut bone and adhering meat and gristle is one of the best forms of animal food, but is difficult for a great many poultrymen to obtain. Therefore the majority of us must look to some of the commercial products now on the market to supply this want.

I know of no other system of feeding which will more encourage winter egg production than the following: In the morning as soon as the fowls are off the roosts they should be given a light feed of warm mash, consisting of three parts ground oats, two parts corn meal, one part wheat bran, one part middlings and one part beef scrap. No more of this should be given than will be eaten quickly. Then scatter a few handfuls of wheat, oats and millet seed in the litter. This will keep them busy and the exercise will assist in maintaining animal heat. At noon give a light feed of wheat in litter. At night give all they will eat of corn and wheat which has been previously warmed. Beef scrap may also be kept constantly before them in hoppers. They should have free access to good grit, and water slightly warmed should be given twice each day.

Provide a dust bath, and keep a constant outlook for lice. The easiest way to fight them is to prevent them ever entering by the occasional use of some good liquid lice killer. Keep the entire building scrupulously clean and the nests well made and inviting. Air out both rooms as often as the weather will permit, thus avoiding dampness.

When approaching the poultry house always do so quietly, never causing fright among the fowls. But, on the other hand, strive to make them always glad to see you. By the observance of these few simple rules the winter egg supply will be abundant.

First Prize Buff Orp. Hen New York 1907

early and have completely recovered from the ordeal of growing a new coat of feathers. Such hens make very desirable winter layers. They should be allowed plenty of room, as they should be compelled to remain inside during severe weather and must not be crowded.

Not less than six square feet should be allowed for each hen and eight would be better. If many fowls are kept they should be divided into flocks of from 20 to 30 each. By so doing you will be able to give them closer attention, and to get the very best results the attendant must become very familiar with his fowls.

Then you are in a position to detect very readily anything that may go wrong with any one of them. For it is very necessary that every one be kept laying, and that none be allowed to loaf. It is those few loafers which spoil the average for the entire flock and disappoint the poultryman when he figures up his monthly egg record.

The poultry house need not be expensive; just as good work can be done in one of very moderate cost. It should be warm, light, dry, well ventilated and free from draughts. The very best results may be obtained in a house arranged

PRODUCING EGGS IN WINTER.

Written for American Poultry Journal by R. B. Rushing, Ozark, Ill.

For increasing the egg production, or making a strain of layers, or compelling any breed to lay all the eggs possible, is a matter that depends entirely on the ability of the breeder. It is not so much a question of any particular breed, although some breeds are more prolific layers than others. By nature Leghorns and Hamburgs are natural layers. But, on the other hand, Plymouth Rocks, Wyandottes and Brahmas were by nature fair layers, but by judicious breeding, careful selection and scientific treatment have become very prolific layers.

Of course hens lay eggs naturally, but to compel them to lay their full quota certain points pertaining to care and feed must be understood. What we feed a hen brings one of two results—either flesh or eggs; not generally both. It can be readily understood, therefore, that the feed is important. Old-fashioned people have old-fashioned methods, and the feeding of twenty years ago was mostly to sustain life—in other words, hens, like all other animals, had to be fed in order to exist. This idea still prevails among some farmers. Their hens can roost here and there and get their feed the same, and they suppose that is all that is necessary, both to maintain life and produce eggs.

I want to impress upon the mind of the reader that hens must be fed to produce eggs and also to maintain life and health. Eggs should be the first consideration, because they represent the earning quality of the hen, the same as milk represents the earning quality of a cow. It seems natural to let the fowls have full range. Their nature seems to point to a roaming life, so they can pick such food as suits their fancy, but it requires too much exercise; it results in eating to live rather than eating for egg production. Personally I am a great believer in yarding hens. I think at least 30 per cent more eggs can be had by so doing. Yarding of hens has other advantages; it is the best way to determine exactly how many eggs are laid and feel sure all the eggs are gathered each day. I attribute a good egg yield in winter largely to the care the hens get. In winter hens should be given a warm house and be fed regularly and supplied with warm drinking water and warm food of mornings. I have found the following to give good satisfaction as a winter feed: The first thing in the morning I feed my hens a mash feed made up of wheat bran and middlings, made up in skimmed milk, as their stomachs are empty then and they need some soft food; the skimmed milk in the mash furnishes animal food and thus makes an ex-

cellent ration. After the mash is all cleaned up I put them to work scratching in the litter of straw for the following mixture of seeds: Kaffir corn, sorghum cane seed, sunflower seed and cracked corn of equal parts. I also keep a supply of oyster shells where they can have free access at all times. Experience has taught me that it is always best to be on the watch for lice, and treat for them whether they are found or

"Up-to-Date," winner of eight first prizes at state shows. Owned by E. J. Barker, Thorntown, Ind.

not. Keep a good supply of road dust where they can wallow in it, or, if road dust is unavailable, a good substitute is coal cinders or wood ashes. Keep the house whitewashed inside and out, give the roosts a frequent application with coal oil, and the lice will not give any serious trouble. My hens are my special care in winter and I am rewarded with a good yield of eggs when eggs are at a good price.

American Poultry Journal's Special Offer For a Club of 5 Subscribers

FREE PRIZE

IF YOU get up a club of five subscriptions to American Poultry Journal, we will make a special cut rate of 35 cents each. We will also send you for your efforts a set of 5 beautiful colored poultry pictures, and these five subscriptions will also be counted in our great subscription contest toward winning the magnificent piano or pony cart outfit, or some of the \$250 cash. This picture shows only a pony. Our prize will consist of pony, cart and harness complete. Our subscription offer, with the pictures, will be sent to you as soon as we receive your five subscriptions. Either new or renewals will count. Don't put it off but send this week. It will also give you a chance to get Christmas presents free.

Jump right in and send at once if you want to win one of these big prizes. You will also help us in this way to swell American Poultry Journal's subscription list.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Down at Marseilles there is an editor who is furious. Listen to this:

"It is high time the poultry press of the country asserted itself. It is time the editors awakened from the lethargic state in which they have dozed so long and took a fresh grip on things. The supporters of the poultry press—subscribers and advertisers—should insist that their interests be given more attention. In a sense the poultry press is the custodian and protector of the interests of the poultry fraternity, but a majority of the editors have become bumfuzzled or hoodooed or hypnotized, or something equally awful, and they hardly dare call their souls their own. They need fixing and need it bad. Rather than incur the ill will or displeasure of a few political shysters who need to be called, they sit idly by

discussing upon the importance of setting a hen when she wants to sit or some other unimportant subject, while the trickster is plying his trade unmolested."

If Brother Schureman will become as determined as he is now furious and will put some shot into his gun instead of using blank cartridges he may be able to do some good in the direction he is now shouting. Name the men and the acts, dear brother. We are all attention.

* * *

Second Vice President Purvis is carrying the American Poultry Association along at an amazingly rapid gait. In a moment of enthusiasm he penned the following for Poultry.

"It would be easy for the association to take charge of the shows and outlaw every show not conducted under its rules, and by right of a permit granted to the association holding the show. It has power to forbid judges from judging an outlaw show, and, if it would assume the authority which clearly belongs to it, might soon bring about a condition which would nullify the value of any prize won in a poultry show which had not been authorized. The big shows would no doubt be glad to fall into line with such an arrangement by refusing entries of birds which had been shown in an outlaw show, and the poultry press could probably be relied upon to decline to give notices to shows held independent of the authority of the parent association."

J. H. Drevenstedt replies to this and voices the ideas of the fanciers of America—the men without whom there would not be held a poultry show from the Atlantic to the Pacific—the men who are the very life of the poultry exhibits of America. Mr. Drevenstedt says:

"We do not believe Mr. Purvis voices the sentiment of the American Poultry Association when he makes such radical statements. If he did, there would be a first-class band of disturbance strewn in the camp and an exodus of members follow that would never stand for such a policy. If it is simply Mr. Purvis' private opinion no one will deny him the right to it and no one will for a moment borrow any trouble over it. But with the A. P. A. it is different. The latter cannot govern without the consent of the governed. Neither can it dictate what shows are to be judged by its licensed judges. Neither can it outlaw any show that is properly conducted. And as for the poultry press upholding such policies, 'Nay, nay, Pauline.' The poultry editors of America are supposed to give the news of the poultry world, including all shows. Exhibitors cannot be coerced; they will show where they please and where they get a run for the money. Furthermore they will support the papers that recognize them as fanciers and exhibitors and not merely as advertising assets. What poultry fanciers want is knowledge of what is going on in the poultry world regardless of any work of an excisioner or eliminator who prints only what he finds convenient and leaves out frequently what most of us are looking for. The tightening of the lines, the contracting process of forcing obedience to arbitrary rules, apparent in the statement above alluded to, will be resented by every genuine fancier and breeder of stand-

ard-bred poultry. What is wanted is a wider and broader scope, a recognition of the great army of fanciers outside the American Poultry Association, who are capable of thinking for themselves, men who can breed and judge chickens, and run poultry shows, without the aid of the parent body. Such men will aid and follow a lead, but cannot be driven.

* * *

Human nature is a good deal alike the world over. The advocates of some of the very drastic measures adopted by the American Poultry Association for the purification of exhibits and the dealings of breeders and fanciers called our attention to the fact that the Poultry Club of England had succeeded in making all poultrymen good and fair-dealing. But, of course, these reformers, like all reformers, did not, do not, give due consideration to the weakness of human nature. In this connection the following from Poultry is interesting: "It is to be greatly regretted that there is not in the poultry Fancy a really powerful body, who could exercise a wholesome influence like that of the Kennel Club in dog circles and frustrate the tricks of those unscrupulous persons who do unfortunately get among us; but I am afraid that reforms move very slowly in the poultry world. However, any honest attempt, no matter how crude some people may consider it to be, that is made to put a stop to the malpractices that undoubtedly do exist should receive the full support of every true fancier." When the American Poultry Association has been in the business of regulating men's acts as long as the Poultry Club of England has been it will know more about several matters than it does now, and will still be looking for that very desirable thing—power to make all men honest.

* * *

J. W. Whitney, of California, in an article on mating Columbian Wyandottes, in Poultry, sounds the keynote which we hope will be given careful attention by the Columbian breeders of America and the committee whose duty it is to revise the present Standard of Perfection. It is the writer's opinion that for the best development and perfection of the breed, the Standard should be so worded as to give the preference to those specimens carrying a deep, intense coloring, both in those sections where black is intended to correct, and also in under color all over the body. If the writer had the authority to do so he would make a Standard which would unmistakably cause the judge to give the preference to birds (as regards color) that were two or three shades darker than a standard Light Brahma. For a few years to come a favorable Standard and judges who recognize the disposition of the breed to lose color, will prove the means of rapid and desirable advancement.

* * *

In our examination of the poultry journals for November we notice that a large number have editorials regarding "faking show birds." It's a discussion of the old, old story, the weakness of human nature. This is, we believe, a matter which the editors can with profit leave alone. What would be termed "faking" of one fancier would be deemed right and proper by another. There is a point beyond which

no self-respecting fancier will go in the preparation of his birds for the show room. The occasional exhibitor who goes beyond this point is not long allowed to play his game. So look pleasant, dear brothers, admire the beautifully conditioned show specimens and have faith in your fellowmen.

* * *

The world pays homage to the men who do things. No wonder the Rhode Island Red Club of America is far and away the most successful, best known and most result-getting specialty club in America. It is again a case of the men behind the guns. At the Jamestown Exposition the club maintained a booth, with President Caswell in attendance. Here Rhode Island Red literature was distributed, everyone being invited to take advantage of the comforts afforded in the booth, and all finding rest and pleasure in being entertained by President Caswell and his assistants. It's only live people who count in the world's doings.

* * *

The American Stock-keeper, referring to the fact that a number of New York millionaires have joined the American Poultry Association, says: "From the foregoing it is apparent that the time is past when a man must apologize to himself and be excused by his neighbors for his connection with the association." Well, well. That may be the Boston view of it, but out in the world members of the association have been pretty well satisfied with the kind of men and women they found within the membership. Glad those fellows down East have come in, all the same.

* * *

A Texas breeder is advertising White Rock eggs for sale from a pen headed by "a cockerel weighing 14 pounds, which won second prize at a leading show." To which Judge H. B. Savage refers: "Let's see about that! Standard weight 8 pounds, stated weight 14 pounds, surplus weight 6 pounds—Standard cut for the excessive weight 10 points, thus reducing the bird's score to 90, without the consideration of any other section. Question, should that bird have won at all? We think not, if he actually weighed 14 pounds and the Standard of Perfection governed the exhibit."

* * *

Mr. H. A. Cameron, Montclair, N. J., writes to the associate editor American Poultry Journal as follows: Would you cut, and how much, a Rhode Island red pullet without black in wings and tail? Neither is there any black in men in Rhode Island Red competition. To which the associate editor replies as follows: Would pass such a specimen in Rhode Island red competition. Black in wings and tail and ticking in hackle is demanded in a standard Rhode Island Red. Might as well consider a Columbian Wyandotte, although black in wings, tail and hackle.

* * *

"Red Hen Tales" for 1908 is out. It is a corker and again shows that the Red men are the best advertisers and boosters doing business in the poultry world. They are doing business on their own account, too, for here we find in full the standard for the two varieties of Reds, a publication made without consulting the American Poultry Association. There are shown club models of male and female, single comb

and rose comb. These drawings, by Schilling, are to our mind the best work yet given the world of Rhode Island Reds.

* * *

The high prices of grain and food products of all kinds has not seriously affected the comparatively few poultrymen who have realized the great value of the various root crops as food for fowls. The fact is that the poultry keepers of this country are feeding just about double the amount of grain that is good for their pocketbooks and good for the fowls. The root crops, such as beets, carrots, onions and potatoes and cabbage and such vegetables are a wonderfully cheap and valuable food, used in connection with the various grains.

* * *

The old way of conducting the poultry show is a thing of the past. The down-to-date poultry exhibition is something more than it used to be. Now we are to have lectures, papers, etc., and in all a program that is highly interesting and instructive. The Niagara Falls meeting of the American Poultry Association was so interesting and instructive that the wide-awake show managers have hastened to adopt many of the pleasing features, brought out there for the first time.

* * *

Practically all the specialty clubs of England have united and a committee has been appointed to draw up rules and regulations for the federation of all these clubs. What a powerful agency for good this federation will be! What a great benefit it would be if we had in this country such a federation of clubs working hand in hand with the American Poultry Association. Mark this prediction: It will not be long before we have this federation here. Speed the day.

* * *

Professional advertising writers sometimes do queer things. One of the best of them, who usually "makes good," has an article in a leading advertising journal, in which he says that the incubator manufacturers are now beginning to secure some trade from the town and suburban poultry breeders, practically all their machines up to this time having been sold to farmers. This fellow will make the discovery some day that the Irish are eating potatoes.

* * *

Says "Drev" in the American Stock-keeper: The Rhode Island Blue is the latest. The Red has been here for many years, and the White came as a matter of course, so all being American productions it's three cheers for the red, white and blue. Rhode Island is a small state, but it has turned out a big lot of chicken novelties in the past twenty years.

* * *

One by one the most prominent and reliable judges are cutting out private scoring. Private scoring has its legitimate place, in a very limited way, but as practiced by a large number of judges has been a great detriment to all concerned.

* * *

To "anxious inquirer": No, it is not incumbent upon you as a fancier and gentleman to consult the American Poultry Association in regard to how and what you shall feed your

Things That Make Poultry Pay

O.K. ROUP REMEDY

During Fall and Winter look out for Roup and don't be caught napping. Be sure to have O. K. Roup Remedy on hand ready for each case of roup, colds, canker, catarrh, asthma, and the similar affections which are liable to attack your birds, particularly at this season of the year. O. K. Roup Remedy is a guaranteed remedy for these troubles. It rarely fails to give immediate relief when used according to directions, and is perfectly safe to use. Sent post-paid to any address for 50 cents.

O. K. Poultry Food

To keep your fowls healthy, and the young pullets in prime condition for winter egg-laying, give them O. K. Poultry Food. It will create fresh vitality, renewed vigor and strength, and they will begin laying much sooner and at a rapid rate. O. K. Poultry Food is a pure, guaranteed conditioner that aids digestion, puts the egg-making organs in perfect condition, and keeps the birds lively and strong. The test of these results will be found in the nest and in the general health of your flock. Give it a trial.

LAMBERT'S DEATH-TO-LICE

Keep your fowls free from lice all the year around if you want them to be profitable. The best way to keep lice away from your birds is to use the "old reliable" Lambert's Death-to-Lice. This has never been known to fail. It was always good, but is now better than ever, owing to the recently installed Improved Pulverizing machinery used in its manufacture. Your money back if not satisfactory in every way. Sample for 10 cents; 100 ounces for \$1.00.

O. K. STOCK FOOD CO., 608 Monon Bldg., Chicago, Ill.

Standard-bred fowls. You still have the right as an American citizen to supply them with whatever you please. We expect, however, that Vice President Purvis will get to this matter before long.

The old English game is just now having a boom in England—a revival. Games, generally, in this country seem to have gone to the bad. And still every lover of fowls admires a game. An enterprising fancier could do some business with the old English game in this country. He has never been pushed here.

Frank Sites has been so busy during the past few weeks helping to elect Tom Johnson mayor of Cleveland and rejoicing over his election that he has not found time to give us that promised article on Black Wyandottes. He will deliver the goods soon, however. It will be worth waiting for.

Where the self-feeding hopper is used no mixture is better than the following: Two hundred and forty pounds of wheat bran, 80 pounds of shorts, 80 pounds of ground barley, 50 pounds of oil cake meal, 50 pounds of beef scraps, 50 pounds ground bone, 5 pounds of pulverized charcoal and 4 pounds of salt.

If the Silver Spangled Hamburg, one of the most beautiful fowls in existence, and a breed equaled by few and excelled by none as an egg producer,

had a few more friends like Dr. J. S. Wolfe and Julius Frank, it would be a favorite fowl of those who desire to keep a flock for egg production chiefly.

The Grape Vine brings the report that Theo. Hewes is working for the secretaryship of the American Poultry Association. We mistrusted that that vigorous editorial in the November issue of the Reliable Poultry Journal mean that some one was after the place occupied by Ross C. H. Hallock.

For years we lost track of our old friend W. S. Willis, journalist, agriculturist and philosopher. Now comes the Live Stock Tribune, locating him at Riverside, Cal., where he is making a net profit of \$4.38 per hen per year from a large flock of White Leghorns, run for egg production alone.

It is the opinion of John H. Robinson that the members of the committee to whom was referred the matter of a "dressed poultry standard" were not wise enough to know that they were to treat the matter as a joke. Again Brother Robinson rings the bell.

Again we say we would like to see a number of prominent Northern exhibitors make a tour of the leading Southern shows, each with a good string of birds. Here is some money and fame which is being put aside by these Northern exhibitors.

A representative of Poultry, England, who made a trip through the cold

and exposed north of England country was surprised to find that White and Black Leghorns and Partridge Wyandottes were the breeds commonly kept.

If the fellows who are howling for "uniform judging" will take time to carefully read the list of judges licensed at Niagara Falls last August they will realize that they are barking at the moon.

Show us a successful poultry fancier and we will show you a man who believes in the present and its opportunities; in the future and its promises, and in the divine joy of living.

We will wager a big red apple that if Bryant, Tompkins, Caswell and Aldrich go into the race the first "breed Standard" issued will be for Rhode Island Reds.

Reese V. Hicks has drunk his fill of Kansas air and is as lively as a colt in a new pasture, all of which is good for Poultry Culture.

The White Minorca deserves to have more enthusiastic and hustling friends than it has today.

Columbian Wyandotte Undercolor

In his comments on the Columbian Wyandottes at the Jamestown show Judge T. R. Parrish says:

A very noticeable thing was the clean backs of the birds, very few showing any black or slate undercolor. Just so long as the Columbian is bred for a white undercolor in females, that long will you have wings with more white than black in the primaries. To get a good black wing it is absolutely necessary to have a slate undercolor. Let's have the black wings even though the Standard considers slate in females a defect.

The writer was a member of the committee appointed by the American Poultry Association to prepare the Columbian Wyandotte Standard. It was only by "hanging on" that a minority of that committee prevented a report being made on a Standard disqualifying females with any black or slate undercolor. The argument of the minority was in line with what Judge Parrish advocates, and which every breeder of Columbians has since learned. In a number of Western shows we have seen females so severely cut for this "defect" as to put them out of the running, when any one of them was worth a hall full of the other kind in the breeding pen. We call attention to this at this time because hundreds of breeders are now going into the variety and are now buying their foundation stock. In nearly every case the demand is for females without a trace of slate or black in undercolor. There could be no advancement of the Columbian Wyandotte were such breeding stock generally used.

Thos. F. Rigg.

Exposition clubs are being formed in different parts of the country. The members of the clubs are saving one, two or three dollars each week in order that by the time the Alaska-Yukon-Pacific Exposition opens at Seattle, June 1, 1909, they will have sufficient funds to pay for a trip to the world's fair. A treasurer is elected who collects and keeps the money.

\$17. A HEN IN ONE YEAR

WAS THE PROFIT MADE—AND PROVED

By one of our subscribers. How it was done will be told in our columns only. You can make more money from poultry; any one can make \$2 a hen up, who reads **POULTRY HERALD**, edited by former successful manager world's greatest market and fancy poultry farm and contributed to by America's most successful poultry keepers and judges. Each issue is full of what you want to know in that month (not six months before or after), including:

Illustrated, Profit-Increasing Leading Articles; Instructive Short Articles; Editorials; Turkey Department; Ducks and Geese Department; Questions Answered (Free) Department; Disease (Prevention and Cure) Department; Clubs and Associations; Show Dates, etc.

If interested in poultry, for market or exhibition, subscribe for the up-to-date, reliable **POULTRY HERALD**; published 19 years, monthly, 50 cents a year, stops when out.

AN EXTRA GOOD OFFER—YOUR CHOICE

With your subscription we will send free, postpaid, one of the following books, full to the covers of new, reliable, money-making instructions.

EGG MONEY, How To Increase It—128 pages. Illustrated; rearing; housing and feeding layers, to get eggs when the price is high; use of the trap nest; the 200-egg hen; preserving eggs; marketing to obtain better prices; descriptions of successful egg farms, etc. **Price, 25 cents.**

POULTRY HOUSES, Coops and Equipment—100 pages, 90 illustrations; how to build best and cheapest large and small houses, roosting and brood coops, all fixtures and utensils; how to make the best foundations, floors, walls, roofs, nests, ventilators, show coops, drinking fountains, etc. **Price, 25 cents.**

POULTRY MANUAL, a Complete Guide To Success With Poultry—168 pages, illustrated; all about leading standard breeds and breeding, written and illustrated by F. L. Sewell; value of different feeds; best methods of feeding; how to make farm poultry pay; how to cure diseases, etc. **Price, 25 cents.**

CHICKS, Latching and Rearing—128 pages, illustrated; how to build an incubator house; hatch and rear with incubators and brooders and with hens; care of the growing stock; developing, fattening and marketing; the broiler business; the profitable "soft roaster" industry, etc. **Price, 25 cents.** Address

POULTRY HERALD, Dept C., ST. PAUL, MINN.

"HIT" BY THE STANDARD.

Editor American Poultry Journal.

Dear Sir: I suppose an inexperienced hen raiser has a right to say a few words in regard to some things that puzzle him, and also annoy him, as well as the expert who apparently has arranged these annoyances and pitfalls for the beginner. Some years ago I had a nice flock of Barred Rocks, which bred the usual fine looking chicks with the usual light color in cockerels and darker color in pullets. I supposed that this was all right until I was informed that the "Standard" had decided otherwise. This man-made Standard had ruled that where Nature disagreed with it, it was simply an oversight on the part of Nature, and so much the worse for Nature. I could raise fine, healthy chickens from every pen, and they would produce their like, from the usual way of things, but if I wanted to get the proper and stylish shade of chicken I had to go into the question of running two different kinds of Plymouth Rocks on the same place—pullet breeding and cockerel breeding pens—if I was to get anything that would look right to a judge in the exhibition pen. And the cockerels of one kind and the pullets of the other could be bunched in one crate and exhibited as the Ideal. Of course, I had to submit; Nature and myself seemed to be beaten. In the course of time I "chucked up" the Barred Rocks, not because they were not a grand bird, but because the requirements of the breed seemed to be somewhat at odds with the facts in the case. I turned to other things for consolation and recreation. But the "hen fever" is a thing that will return again if a fellow has ever had it right and has not made a flat failure in his first attack. I had it bad, and had learned how to breed good, healthy chickens, and liked the job. True, I am not a professional, as I earn my living as a slave in the government service, but I had to go back to hen raising or bust. I looked it over and decided on the White Wyandotte, which will turn out pullets and cockerels from one pen that will come up to the "Standard," which may be a matter of surprise, but it seems natural for the Wyandottes, and agrees with aforesaid Standard. I suppose the Standard could not fix up any game on a plain white chicken that would throw him down.

Now, has this new edition, revised and improved, got any new scheme for defeating the plans of Nature in regard to the White Wyandotte? If it has, I will simply have to eat my fifty or sixty pets and take up some solid color breed that has not yet been marked for destruction by the Standard. I can surely change the breed of my special brand of chickens about twice as quick as they can get out a revised edition of the Standard, which calls for some unnatural marking or other point in a breed of birds. Or, I can start a new breed of my own by picking out a lot of mongrels or about the same general appearance, of the right size, shape and qualities—blending the lot for several years and then giving them a name—meanwhile trying to keep them from the sight and hearing of the Standard until they are so mixed that they will never come one like another, and the fellows who frame up the Standard will not be able to get onto their curves at all. (Look at Rhode Island Reds.)

Now, all this comes of my first experience with Plymouth Rock chickens. I

am certainly "agin the Standard" in some other respects, as I think it calls for some things that are not necessary to a distinctive breed, and in breeding for these points a man is liable to weaken and demoralize his flock. I have to cull out chickens from my healthy flock of Wyandottes, of course, occasionally—even though I am paying more attention to breeding good, strong, healthy chickens, and let the color and shape rest as a secondary matter. What kind of flocks must some people have who try to keep their outfit up to the Standard in color points? I am thankful every time I see a flock of this kind that I did not take up some of the mixed colored breeds this time, and have only to worry about trying to get them as white as possible, and see that they are Wyandotte shape. You see, I've got 'em bad, but I am not so entirely prejudiced in favor of the White Wyandotte that

I do not see and appreciate the value of other breeds. I merely think that in the interest of several breeds it would be well to modify the Standard to meet Nature half way anyhow. I honestly believe that some of the requirements of the Standard have hurt the poultry business—and some judges also hurt it pretty badly at times. I don't exhibit. Occasionally I get a pretty fine bird, as my stock is high grade and well cared for, but I raise them because I like them, and not to put in a show pen. I know a good bird when I see one. Let us have a little more Nature and less Standard, or lots of people will meet disappointment, and quit chickens on their first year.

Yours truly,

R. B. Clayton.

The state of Washington appropriated \$1,000,000 for the Alaska-Yukon-Pacific Exposition.

must be kept in good condition and supplied with not only sufficient food, but above everything, good feed. To get the best results from laying hens, that is plenty of eggs—one a day and all of good weight—you must give them the proper variety of grain food, something supplying sufficient nitrogenous matter and fed in conjunction with the usual grit. The correct variety of essential grain, something which will make strong, healthy laying hens, will be found in

CORNO HEN FEED

The very best that money can prepare. A feed that will insure the proper growth in young birds and produce laying hens, strong and willing enough to do what nature intended. *Corno Hen and Chick Feed* is used by all the successful breeders in the country.

We don't ask you to buy "Corno Hen Feed" on faith, we want you to see it—then you'll buy it.

We Want to Put a Sample

right into your own hands so that you can examine it—see how clean it is—and note the goodness of the grain it's made of.

All you have to do to get this sample is 10 to drop us a postal giving us your name and address and that of your dealer.

If your dealer doesn't sell *Corno Hen Feed*, we will quote a price on any quantity delivered at your nearest railroad station.

PHEASANT RAISING FOR POULTRY FANCIERS.

Pleasure and Profit May Be Derived From Combining Pheasant and Poultry Breeding—How a Boy Made a Success of Pheasant Raising By Persistent Effort.

Written for American Poultry Journal by Forrest Crissey, author of "The Country Boy."

The fact that so few poultry fanciers become breeders of pheasants has long been a matter of wonder to me. From some experience in both lines, I cannot escape the conclusion that every quality of equipment which fits a man or a woman for success in the raising of thoroughbred poultry is an equal asset towards success in the raising of pheasants. And by the same token, it seems to me that this step is a natural and logical one along the line of a higher development of the same taste which leads into the breeding of "fancy" or thoroughbred chickens in preference to com-

by those not possessing such a taste in a marked degree.

This is another reason for my conviction that the successful breeder of good poultry is naturally equipped to take up the raising of pheasants and to find this pursuit more fascinating and perhaps more profitable than the breeding of pheasants. Several years ago when, as a special feature writer for a Chicago daily newspaper, I was in search of subjects out of the beaten rut, I chanced upon the fact that a boy in Oak Park had his father's back yard almost literally full of these beautiful birds.

for any other business of which he knew.

After much debate it was finally decided that he should go into pheasant breeding as a serious business, backed by his father's business experience and standing.

Today the Wallace Evans Game Propagation Farm, four miles from Oak Park, and only fifteen miles from the Chicago court house, is the biggest game breeding establishment in America, and is one of the show places of this region. The farm is 100 acres in extent and is devoted exclusively to the breeding of game birds, mostly pheasants. The flock of "English" pheasants now to be seen on this farm is undoubtedly the largest in America and perhaps in the entire world. It numbers fully 4,500 birds. What this means is not easily realized, because very few readers understand the fact that the greater the flock the greater the difficulties encountered. Speaking by comparison, it is easy to raise a flock

A Flock of Young Pheasants on Wallace Evans' Farm, Oak Park, Ill.

mon ones—for pheasants are certainly more beautiful and interesting than chickens and their propagation and care involves new and more interesting problems. However, all the knowledge, patience, watchfulness and skill developed in the breeding of good poultry applies directly to the propagation and care of pheasants, despite the variations offered by the problems rising with regard to pheasants.

Very few persons have ever taken up the raising of thoroughbred poultry from purely mercenary considerations, so far as my observation goes. While carefully considering the commercial outcome of the undertaking they have been drawn into it because they liked it. What is more, it is certain that the best results in the breeding of fine poultry have been obtained by those having a decided natural taste for it and that very few successes in this calling have been scored

Young Wallace Evans followed pheasant raising because he liked "to fuss with the birds," and his father encouraged him in the diversion because he had himself raised the birds in Wales and believed that it was as healthy and wholesome a pastime as the boy could have. Boys often tire of their recreations and throw them aside; this lad stuck to pheasant raising with true Welsh tenacity and had "the knack" with the birds which made them multiply and prosper under his hand until the back yard "pheasantry" at Oak Park was almost literally overflowing with these richly plumaged creatures. Then came a crisis in his career. He had found that there was a real demand for pheasants—a demand that promised to multiply in the near future; that he had fairly mastered the art of raising these birds in comparatively large flocks and that he had more of an inclination for this than

of twenty-five to one hundred pheasants and rear them in health with a very small percentage of loss, while the dangers to the health of the birds increase in a cumulative ratio as the number of birds mounts into the hundreds and goes on up. Plagues which constantly assail large flocks and are always an imminent peril to be guarded against by the most painstaking precautions are relatively remote and infrequent with the small flock. This fact alone is a strong reason for the raising of pheasants by many fanciers, working on a small scale, instead of depending for the supply on a few professional breeders and the state game farms who go into the enterprise on a large industrial basis.

In his report to the American Breeders' Association, Mr. Evans said: "I must frankly admit that our long-cherished hopes of seeing our coverts teeming with pheasants is more likely to be real-

ized through individual means than through the exertions of the game departments of the states themselves, as politics and not fitness too often places men in this important position, and the few good ones who have attained scientific knowledge by hard work and energy become discouraged after everlastingly having flaunted in their faces the fact that some other more favored politician will soon get their job and undo all they have striven so hard to attain."

The number of "estates" and "country places" owned by men of wealth or comfortable means has increased almost beyond belief within the past decade of great material prosperity. Today they are numbered by the tens of thousands—some of them of vast extent and maintained at elaborate expense, others simple farms and run as farms on a

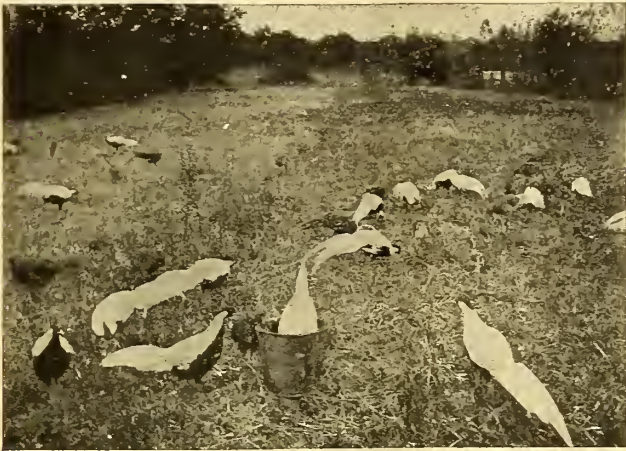

more than casual survey of conditions. Perhaps it is not overstating the case to say that there is scarcely a community where the breeding of fancy chickens is carried on that does not have, within a few miles of it, a "country place"—or several of them, perhaps. This means that the chicken fancier is close to a local market for at least a considerable number of pheasants—a kind of market as yet undeveloped.

Without any special effort, the man who is first in his locality to keep pheasants does his own advertising and interests future buyers by the mere keeping of the birds—for they invariably attract visitors.

While I have placed the emphasis of these comments on the English pheasant because of its demand as a game bird, I have no wish to overlook the claims of

to grow until they become comparatively common instead of very rare. The beauty of the birds, in short, is so compelling as to instantly create desire for personal possession.

There is also another claim to be urged in favor of the aviary pheasants. They may be raised in closer confinement than the "English" and they bring higher prices. Of course thousands more English pheasants will be used in this country than any other kind as the game bird appeals to the sportsman, whose name is legion. At the same time, I believe that there are thousands of communities where a breeder of aviary pheasants may find a profitable market for a limited number of birds. This is not saying that I believe any man or woman can make a fortune or even a comfortable competency in the breeding of pheas-

Silver Pheasants on Wallace Evans' Farm, Oak Park, Ill.

"English" Pheasants on Wallace Evans' Farm, Oak Park, Ill.

commercial basis and still other places of only a few acres in or near country towns. But all of them coming under the head of "country places" are owned and maintained by men who wish to find in them a foil for the grind, the turmoil and the hard artificiality of the city and its life. These places are, then, for the pleasure and delight of their owners. Looked at from this viewpoint they may, every one of them, be considered as eligible for pheasants. If the owner of a country place has a strip of woods suitable for a game covert what could be more interesting than to stock that covert with the most splendid of all game birds which may be reared under human care—the "English" pheasant? This one field alone is sufficient to make a sharp demand for all the English pheasants which can be reared in the United States for the next five years—this, at least, is the opinion of the writer formed from a

the other or aviary varieties: the Golden, Silvers, Reeves and Lady Amhersts. These are show birds in every sense of the word and the eye which does not brighten at the sight of a little flock of these splendid creatures moving across a carpet of grass is hopelessly dull to beauty. To see a Golden pheasant, with its gorgeous plumage of scarlet, gold, blue and purple, is to desire it.

Nothing else is so much like a spot of "feathered sunshine" as a golden pheasant cock in full plumage. Then the splendid Reeves, magnificent in scales of gold and black, are regal in their proportions and their bearing. Almost the first thought of any person seeing a cock of any one of these graceful and brilliant species of the pheasant family seems to be "How beautiful he would look on our own lawn." This is the reason why the demand for the aviary varieties of pheasants is, in the opinion of the writer, sure

ants of any kind but I am convinced that the private fancier can operate a pheasant pen in connection with his poultry yard which will add a desirable sum to the total receipts.

In this connection, the local poultry and game shows are generally eager to secure, as a special attraction, a fine display of pheasants and are often willing to make it an object for the owners of such birds to display them.

Writers on poultry seldom neglect to urge the fact that keeping chickens is a calling especially adapted to women. By the same token, so is the breeding of pheasants. The woman who has a knack or a liking for fowls is the ideal pheasant breeder.

The Administration building of the Alaska-Yukon-Pacific Exposition is now under construction and will be completed by the middle of August.

Shows, Associations and Clubs

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News

JAMESTOWN POULTRY SHOW.

The Jamestown Exposition Poultry Show, quoting Mr. J. H. Drevenstedt, the veteran fancier, judge and journalist, "was both a surprise and a disappointment." It failed to reach the number of entries expected, but made up for this shortage by the superb quality of the birds exhibited. Mr. Hewes made a strong effort to make this show the greatest ever held in the world, but the odds were against him. There were by actual count: Poultry, 1,217; bantams, 51; ducks, 25; turkeys, 16; games, 2; pheasants, 2; total, 1,321.

It was positively outrageous the way shipments were delayed in transit. An Express Company had the concession of handling all express matter consigned to the exposition grounds and it was positively outrageous the way shipments were delayed in transit. It required two days to bring the birds to the exposition grounds. Mr. Greenwood's birds from Lake Mills, Wis., which were shipped October 19, did not reach the hall until October 26, two days after the judging was completed. Another coop containing seven of Mr. C. A. Byer's choicest

black Orpingtons, arrived at Jamestown with five birds smothered to death, entailing a loss of something like \$1,000 to the unfortunate owner. The latter has sued the express company and the outcome will be awaited with interest by all shippers of live stock.

The financial outcome of the poultry show we hope proved satisfactory to all concerned and Mr. Hewes made a statement at the poultry institute meeting to the fact that all premiums would be paid some time, and that it may take six months or longer for the exhibitors and the judges to get their money. We are sure that if Mr. Hewes has his way everyone will get his money.

The feeding was done by the Corno Mills of East St. Louis, Ill., managed by Mr. E. C. Elzmeyer, advertising manager of the Corno Mills Company, ably assisted by Mrs. Florence Forbes, of New Decatur, Ala.

Like all other world's fairs the Jamestown show was of national importance. It brought the fanciers from all sections of the country together and the prizes were distributed pretty well over all states of which thirty were represented. The competition was one

of the keenest we have witnessed for some time. The fact that the entries were not what had been expected made it necessary to cancel the engagement of six judges as the classes did not fill to require their services. The judges who placed the awards and who gave entire satisfaction were J. H. Drevenstedt, Red Bank, N. J., known to be one of the best in the world; W. S. Russell, Ottumwa, Ia., who has judged at many western shows; J. F. Marshall, Atlanta, Ga., who represents the extreme South; Reid Parrish, Nashville, Tenn.; "Bobby" Jones, "the Wyandotte man"; W. C. Denny, Rochester, N. Y., famously known as a "buff man," and last but not least Geo. Ewald, Cincinnati, Ohio, the largest one of all.

The Barred Plymouth Rocks were strong classes with exceptional quality in some of the winners. Grove Hill Poultry Yards, Waltham, Mass., won 1st, 2d, 3d cocks; 1st, 2d and 3d cockerels; 1st and 3d pullets; 2d pen. These birds were in fine condition with good type and shape, sound in color and evenly barred.

Pine Top Poultry Farm, Hartwood, N. Y., won 3d hen, 1st pen. The first pen was the finest we have seen this year. The birds looked like peas in a pod, evenly barred, with good shape and color. Judge Jaquins said that some of the cockerels and pullets would have been placed had it not been for the fact that the birds had been on the road for four days.

White Rocks, magnificently classed, the cream of nearly all the best yards in America, were on exhibition. A. C. Hawkins, Lancaster, Mass., won 1st

Talk About Quality

Could you see the twelve thousand W. P. Rocks I have to sell you would say as do all who visit "Fishelton," "The best lot of birds you ever reared." Never in all the 25 years I have been breeding fancy poultry have I had such quality to offer my customers. It is a conceded fact that

U. R. Fishel W. Ply. Rocks

are the very best possible in a general purpose fowl. Place them in the leading poultry exhibitions all over the world they always win, while if used as a utility fowl there is no breed to compare with them. As egg producers, the following letter just received from a customer tells the whole story:

"One of my Fishel pullets laid two eggs April 5th, and then laid an egg a day until the 12th, when she laid two more, making ten eggs in eight days."

Need I say more about the laying qualities of the U. R. Fishel W. P. Rocks? They are without a doubt

"The Best in The World"

If you want to win at your coming show I can furnish you the birds with which to do the trick. Send 2 DIMITES for my 56-page catalog, the finest poultry catalog ever issued. Worth dollars to every one interested in poultry.

U. R. FISHEL

BOX A

HOPE, INDIANA

cock, a large, blocky bird, with rather high comb, but spotless white in plumage.

Greystone Poultry Farm, Yonkers, N. Y., won 1st and 2d hen, 2d cockerel, 1st, 2d and 3d pullet, 1st and 3d pen, the hens being a pair of beauties in shape and color. Pullets repetition of hen class, being of similar type. They also won on Black Minorcas, namely 1st cock, 1st pen.

The Buff Plymouth Rock classes were very warm. The honors were divided between Wm. A. Stoltz, Indianapolis; J. W. Poley, Geo. Fox and G. W. Fowler.

Silver Plymouth Rocks: Rock Hill Poultry Farm, Ossining, N. Y., won 1st and 2d cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 3d pullet, 1st pen.

White Wyandottes made as usual a good showing. We do not believe a finer show of really great quality was ever penned in America. The poor specimens were conspicuous by their absence. Chas. Nixon, Washington, N. J., won 1st pullet. This bird was of

magnificent type and color. Mr. Nixon refused a large sum for this bird. Rock Hill Poultry Farm, Ossining, N. Y., won most of the ribbons. Mr. Corey, the manager, who knows how to condition the birds, captured the following prizes: 2d and 4th cock, 1st and 4th hen, 2d and 4th cockerel, 1st and 2d pen.

Buff Wyandottes were out in full force. Simon Beuth, German Valley, Ill., won the following: 1st and 3d cockerel, 2d pullet, besides three other ribbons. Mr. Beuth was handicapped on account of long distance shipment. Buckhills Poultry Farm, Buckhills, Pa., 1st pullet, 3d cockerel, 2d hen.

Columbian Wyandottes were a fine class. Sunnybrook Farm, West Orange, N. J., won 1st cock, 3d cockerel, 1st and 3d hen, 1st and 3d pen. Mrs. T. W. Turner, Sta. D, Baltimore, Md., 2d cockerel, 2d pullet—two very fine specimens.

Single Comb Rhode Island Reds: Phillip Caswell, Newport, R. I., 1st and 2d cock, 3d cockerel; Frank Langford, Nashville, Tenn., 3d cock, 3d hen and

the most coveted prize of 1st cockerel. We will say something later about these two gentlemen fanciers.

Light Brahmas made the best showing in the Asiatic classes. C. P. Nettleton, Shelton, Conn., won 1st cock, 1st and 3d hen, 1st, 2d and 3d cockerel, 1st, 2d and 3d pullet. E. J. Barker, Thorntown, Ind., won 2d cock, 2d hen, 1st pen—a very good showing when you consider the distance the birds were shipped.

Single Comb Brown Leghorns were numerous and surprisingly good in quality all along the line. It was one of the biggest shows of browns seen in some years. The first prize cock, owned by Forbes Poultry Yards, New Decatur, Ala., outclassed all other males in browns, being a stylish well-finished bird with good head points, very bright and well striped hackle and saddle, good yellow legs and beak. Grove Hill Poultry Yards, Waltham, Mass., won 2d and 3d cock, 1st and 3d hen, 1st and 3d cockerel, 1st and 2d pullet, 1st pen.

R. C. White Leghorns class made a

It Costs Nothing to Try

YOU CAN GET

More Eggs

EVERY atom that the hen uses in making eggs, comes from the food she eats. Isn't that so?

It stands to reason, then, that you should feed those foods rich in egg-making materials. What are they? Let us see:

Nature knew what she was about when she made Cock, Hen and Chick relish a nice, juicy worm or a good, fat bug above everything else.

They relish such food, because it is rich in what the professors call "protein"—and protein is what fowls need, not only to make eggs, but also to make bone, muscle, flesh and feathers, as well as to maintain vigor and vitality.

That is why the hen craves bugs and worms—or some such food rich in protein.

It's a natural instinct for that something which builds up eggs and maintains good conditions.

Now, animal matter or foods are rich in protein, while only limited quantities are found in the grains and vegetables usually fed.

But hens don't get worms and bugs in winter nor when yarded.

Therefore you must provide something to take its place if you expect to get the best results from your flock.

What is that "something?"

The best thing yet discovered is raw, green bone—the fresh trimmings from the meat market—bones with meat and gristle adhering—fresh cut and uncooked.

Analysis shows that such raw bones and gristle—beef, pork or lamb—contain the same food elements as the bugs and worms.

They therefore make a perfect substitute—not something "almost as good," but identically the same.

A food rich in protein, and which costs but little more than the labor of cutting it. It contains more than four times the protein and egg-making materials of grain, and is rich in all the elements that go to make eggs, bone, flesh and feathers.

That is why it makes hens lay as nothing else will:

- Why it improves the vitality of the entire flock;
- Why it makes red combs, bright eyes and glossy plumage,
- Why it enables your flock to produce more fertile eggs, larger hatches, and stronger, livelier chicks.
- Why it promotes growth and development, giving you earlier broilers, earlier layers and larger market fowls; and why

It More Than Doubles Your Profits.

It is cheapest because it is richest in the food elements fowls most need, and because it costs you but little more than the labor of cutting it. It is best because it contains these elements in their most digestible form, and you know exactly what you are feeding—as you cannot know when you use so-called "beef scraps," or the ready-mixed commercial foods, or the advertised "poultry foods" made from secret formulae, for which such extravagant claims are made. You have to buy them "on faith," you don't know what they contain.

Fresh, raw bone is greatly superior to "beef scraps," be-

cause the cooking and embalming and preserving and drying of the scraps destroy nearly all their value.

Experiment stations and thousands of poultrymen have proved the value of green bone. Can you afford to ignore such valuable food? Especially when it costs you but little more than the mere labor of cutting it.

The best machine for preparing green bone is Mann's Latest Model Bone Cutter.

Mann's turns easily and rapidly, cutting all green bone with all adhering meat and gristle, never clogging; never leaving chunks or slivers, wasting nothing.

It turns more easily than any other because its self-governing feed automatically adjusts the cutting to your strength, so that any one can use it.

It makes better poultry food than any other because it utilizes the adhering meat and gristle.

Its open hinged cylinder takes large bones and can be easily kept clean. It is strong and durable and requires few repairs.

We have been a good many years perfecting it, and remedying the defects found in other types of machines, and we are so sure that it will please you in every way, that we ask the privilege of

sending you one on free trial. You will find—as thousands of others have found—that the Mann's works perfectly and that by its use you not only greatly increase your egg production but also save enough in your feed bills to pay for the machine in a short time.

You may get some eggs without feeding green bone, but no food will produce so many eggs at so low a cost, and at the same time do so much to promote the health, vigor and vitality of your flock. It's the biggest profit-maker a poultry-

raiser can use.

Why not give it a trial?

We do all we can to make the way easy for you.

Our Free Trial Offer

No Money in Advance

To prove to you that it is all we claim it to be, we will send you any bone cutter you may select from our catalogue on 10 Days Free Trial—no money in advance.

Just select the machine you want to try. We will ship it to you. If satisfied after the trial, buy it. If not, return it at our expense.

Certainly we could not afford to do this if we were not sure of what our machine will do.

We also manufacture clover cutters, grit mortars, corn shellers and other supplies for poultry-raisers. Send for Catalogue today and make your selection.

Clean Skimming Means Good Living

The hog trough is no place to put butter.

Wide awake farmers want the cream separator that skims the cleanest. It means more profit—better living. That separator is the Sharples Dairy Tubular—the separator that's different.

Sharples Dairy Tubulars have twice the skimming force of any other

separators—skim twice as clean.

Prof. J. L. Thomas, instructor in dairying at the agricultural college of one of the greatest states in the Union, says: "I have just completed a test of your separator. The skimming is the closest I have ever seen—just a trace of fat. I believe the loss to be no greater than one thousandth of one per cent."

That is one reason why you should insist upon having the Tubular. Tubulars are different, in every way, from other separators, and every difference is to your advantage. Write for catalog \$.205 and valuable free book, "Business Dairying."

good showing. Clarence Hewes, Indianapolis, Ind., "heir apparent" to be president and editor-in-chief of the Inland Poultry Journal, won 1st cock, 1st and 2d hen, 2d cockerel, 2d and 3d pullet, 1st pen.

S. C. Buff Leghorns all sound in plumage and good in type. B. S. Beuerlein, Mt. Morris, N. Y., won all first and some minor prizes.

Single Comb White Leghorns, great classes, with good type and plumage. Deepdale Poultry Farm, Great Neck, L. I., 1st cock. Rock Hill Poultry Farm, Ossining, N. Y., 2d and 3d cock, 1st hen, 2d and 4th cockerel, 1st and 4th pullet, 1st, 2d and 3d pen.

S. C. Buff Orpingtons outclassed all 2d and 3d cockerel, 1st pullet. C. S. Muse, Decatur, Ga., 1st cockerel, 2d hen, 1st cockerel, 1st and 2d pen. C. E. Vass, Washington, N. J., 1st hen—one of the best buffs in America.

S. C. Black Orpingtons, strong class. O. A. Bogardus, Warsaw, Ky., 2d cock, 2d and 3d cockerel, 1st pullet. C. A. Byers, Hazelrigg, Ind., 1st cock, 1st cockerel. Mr. Byers lost five of his best birds in transit. J. S. Haupt, Easton, Pa., 1st hen.

S. C. White Orpingtons were exceptionally fine in plumage, something we rarely see. Ernest Kellerstrass, Kansas City, Mo., won 1st and 2d cock, 1st and 2d hen, 2d and 3d cockerel, 1st and 2d pullet. C. E. Vass, Washington, N. Y., won some of the ribbons.

Rose Comb Buff Orpingtons. C. E. Vass 1st cock, 1st hen. J. S. Haupt & Son, Easton, Pa., 2d pen.

Rose Comb White Orpingtons. J. S. Haupt, 1st hen. Owing to the fact that there was no catalogue we were unable to obtain a correct list of winners. The winnings in these columns are taken from notes.

Many old-time fanciers visited the exposition during the first week. Hon. H. V. Crawford, secretary of the New York show, member executive committee A. P. A., and mayor of Mt. Clair, N. J., arrived early on the scene. He reports premium list of New York show ready for mailing and promises the best show ever. Mr. Crawford is also known as the greatest show man on earth, for he has made the New York show what it is. S. T. Campbell, of Ohio, arrived late and was glad he was alive, having been badly shaken up in a street car wreck. Mr. and Mrs. Cleveland, West Orange, N. J., spent a few days at the show. Aug. D. Arnold spent most of the time among the Columbians. Geo. Ewald made a big hit judging Muscovy ducks. Geo. Fox, Louis P. Graham, W. H. Moore, secretary of the Philadelphia show; Mr. Davis, of White Leghorn fame, came down from Philadelphia. Farrar Rackham was there to look after Spratt's interest. Mr. and Mrs. C. S. Byers, from Indiana, stayed until the close of the exposition. Indiana sent a strong delegation, namely: Mr. and Mrs. Theodore Hewes, A. B. Carter, Lloyd Mishler and W. C. Pierce. Mr. and Mrs. Davey, of Yonkers; Mr. and Mrs. Corey, of Ossining; J. H. Hallock, of New York city; E. E. Winchell, of Hartwood; John Jacquins, superintendent of the New York State Fair; B. S. Beuerlein, Mt. Morris; Prof. Jas. E. Rice, Ithaca; C. C. De Puy, Syracuse; W. H. Hunter, Syracuse; Geo. L. Harding, Binghamton, and Mr. Wright, manager Deepdale Farm, Great Neck, Long Island, made up the delegation from

New York state. J. H. Drevensstedt, representing American Stock Keeper; A. O. Schilling, the artist; W. P. Craig, of Pittsburg; John Brinkima, of Chicago; John D. Jacquins, Chas. A. Mattinger, of Baltimore; John W. Poley, of Royersford, Pa., and B. S. Beuerlein made their headquarters at the Lorraine Hotel. Ross C. H. Hallock,

secretary of the American Poultry Association, and Miller Purvis, vice-president of the above association, held forth at the Victoria. F. C. Betts, of the Prairie State Incubator Company, spent a few days at the fair. Chas. Nixon and F. C. Vass came down from Washington, N. J. Tennessee was well represented. H. B. Lansden, of Manchester; Mr. and Mrs. Shelton and Mr. and Mrs. W. B. Doak, of Nashville, composed the delegation of that state. John Brinkama, Chicago; Mr. and Mrs. Joe Winkler, Oakland; E. C. Elzmeyer and Mrs. Luella Swanson came down from Illinois. Mr. and Mrs. Frank Johnson, of Indianapolis, stayed during the show. J. Norman Bowen, R. Randolph Taylor, R. L. Blanton, Andrew J. Warren came from different parts of Virginia. Mrs. T. W. Turner, Chas. A. Matsinger, Calvin Hicks and Mrs. Robt. Holland composed the visitors from Maryland. Mr. and Mrs. Phillip Caswell were very busy looking after the affairs of the Rhode Island Red Club of America. Evidently they did a land office business in getting new members to their cult.

We were very much impressed with the dignified manners in which Mr. and Mrs. Frank Langford conducted themselves. They were the admiration of all who came in contact with them, and we shall never forget the pleasant time we spent in Rhode Island Red alley, not alone with Mr. and Mrs. Langford but also with Mr. and Mrs. Caswell. We are informed that Mr. Langford is a candidate for the executive board of the A. P. A. Why not? We

do not know of a better and more capable man to represent the South upon such an important committee. Mr. and Mrs. Lester Thompkins spent most of his time in Red alley. T. L. Bayne was there representing the Industrious Hen. The Poultry Institute was held on Monday during the show week. E. L. Doak, Nashville, Tenn., was director in charge. The attendance was very light, only twenty-seven present including the speakers, of which there were ten. The following made remarks which was quite interesting, especially to the new beginner: Ross C. H. Hallock, Miller Purvis, T. L. Bayne, Theo. Hewes, D. J. Lambert, T. F. McGrew, S. T. Campbell, Phillip Caswell and Jas. E. Rice.

IOWA STATE SHOW GOES TO FT. DODGE, IOWA.

The 1908 Iowa State Poultry Association Show goes to Ft. Dodge, Iowa. It will be held in the Ft. Dodge armory, which will afford one of the best exhibition halls in the state. It will be pushed, backed up and supported by the State Association and the ever wide awake Northern Iowa Poultry Association. Ft. Dodge furnishes four trunk lines and as many express companies. It will be patronized by more exhibitors from Nebraska, Dakota, Minnesota and Wisconsin than any show in the state. The dates are December 31 to January 3 inclusive, which will give the prize winners of the earlier shows a chance to compete for the "Western Championship." For any information or premium list address

the secretary, Rev. A. B. Adams, Hamburg, Iowa.

GREENFIELD, O.

The Greenfield Poultry and Pet Stock Association will hold its third annual exhibition at Greenfield, O., on December 23 to 28, 1907. Cash and special premiums will be offered, and we extend an invitation to all breeders to show with us. Frank W. Traviss will place the awards. Premium list ready November 1. This association guarantees every premium. For further particulars address Charles Deemer, Secretary.

HOLLAND, MICH.

The Holland Poultry and Pet Stock Association will hold their annual show December 16-20, 1907. S. B. Lane and J. Zindwind, judges. Fred G. Kleyn, secretary.

NEW BERLIN, N. Y.

The second annual show of the Unadilla Valley Poultry and Pet Stock Association will be held January 28-31, 1908. R. F. Talbot, secretary.

MINNEAPOLIS, MINN.

"Ringlets" Are The Corner Stone

To Success In Barred Rock Breeding

THE EMPEROR OF THE BARRED ROCK WORLD

Winner of the Premier Special Prize for Best Shaped Male at Madison Square Garden, New York, 1906

They are the universal standard for matchless quality, and none can fail of success who breed this strain.

The "Ringlet" record at New York since 1887, covering a fifth of a century, is unexampled, and birds from my farm or hatched from my eggs are winning the leading prizes at the world's greatest shows with scores running as high as 94½, 95 and 95½. They have won and made money for others, they will win and make money for you.

The Peerless "Ringlets" Stand Alone

The leaders of all Barred Rocks in North America. They have an international leadership; they encircle the globe and are bred in every land and country where Barred Rocks are known. Every factor known to the science of Barred Rock breeding has been used to bring my "Ringlets" to their present matchless state—

The Ideals of the New Standard of Perfection

Exhibited by me personally at New York they have won a grand total of 101 prizes, 48 of these are firsts and specials, being more firsts and special prizes than won by any competitor in the history of the show. These specials include the \$100 Champion Challenge Trophy (won three times), the \$100 Association Cup (won three times), the American Plymouth Rock Club National Cup, the \$100 Sweepstakes Cup offered by the president for best Plymouth Rock cock, cockerel, hen and pullet any variety, the Harding Challenge Cup for best exhibition pen, and many others.

If you desire to win, I can help you; if you want to breed winners, I can sell you the birds correctly mated to produce high scorers. 1000 grand breeding cockerels for sale; one of them will improve your stock. I will make you a choice and personal selection. Elegant hens and pullets for sale in any number; special low prices on large lots. Show birds fit to win in the fastest company. Splendid new 48-page catalog mailed upon request; it is full of original pictures of New York winners from life.

Address **E. B. THOMPSON, Lock Box 510, Amenia, N. Y.**

WE WANT NAMES

We want you to send us the names and addresses of from ten to twenty-five persons living in the United States, each one having twenty-five hens or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you **TWO BEAUTIFUL PICTURES FREE**. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten names.

We want to send a free sample copy of a special issue of **THE HOME MONTHLY** (The National Poultry Journal) to a lot of poultry raisers who are not now taking our paper, and for that reason we want these names.

Send us immediately a list of at least ten poultry raisers and we will mail you, postpaid, **ABSOLUTELY FREE, TWO REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES**. Address

THE HOME MONTHLY, 637 W. 43d Street, New York, N. Y.

A Remarkable Book About

Incubators

The man who perfected the Racine Incubator is the oldest man in the business. He has spent 26 years on nothing but incubators. Since 1881 he has been constantly testing ideas of his own and others. He has conducted a hatchery, and has made hundreds of tests with different incubators in actual use there.

In this way he has learned more than any other man knows about incubators; and he has now put all the facts in a bright readable, interesting book. It tells the secret of success in a fascinating, convincing way. To the man who seeks an incubator, it is by far the best book of the year.

And it tells, too, how the Racine Incubators and Brooders have been developed by a lifetime of patient study. It shows the Racines as they are to-day. You will want this man's machine when you read his book. The book is free—write today for it. **Remember that We Prepay the Freight to any point in the U. S.**

Racine Hatcher Co., Box 33, Racine, Wis.

We have Warehouses at Detroit, Mich., Buffalo, N. Y., Kansas City, Mo. and St. Paul, Minn.

CLEMENT & FIKE'S

Latest and greatest winnings right down to date, and never duplicated by any breeder in America, on their famous

White Wyandottes

1907 STATE FAIR WINNINGS:

MINN.	WIS.	ILL.	MO.
1-2 ckl.	All firsts	1 pen	All firsts
1-2 pullet	1 cock	1 pullet	1 cock
2 cock	1-2 ckl.	1 hen	1-2 ckl.
2 hen	1-2 hen	2-3 cock	1 hen
3 pen	1-2-3 pullet	2-3 ckl.	1 pullet
More Prizes Than All Others	1-2-3 pen	125 competing	1 pen

In competition with five hundred White Wyandottes, these winnings prove we have the **"GREATEST STRAIN ON EARTH."** No difference what others claim, they have never made a winning like this in one season. Buy of the people who raise their winners. Exhibition stock in any quantity. Breeders for sale cheap.

CLEMENT & FIKE

Box A, LIBERTYVILLE, ILL.

kindly notify or forward to the owner, F. S. Bullington, Box 328, Richmond, Va.

DEFIANCE, OHIO.

The first poultry show to be given by the Defiance Poultry and Pet Stock Association will be held January 15-18, 1908. A. F. Kummer, judge. Edward S. Bronson, corresponding secretary.

GREAT BARRINGTON, MASS.

The Southern Berkshire Poultry Association will hold a score card show on December 31 and January 1 and 2. Secretary, S. M. Fox, Sheffield, Mass. Judges, W. R. Graves and D. E. Tasker.

THE OHIO BRANCH SHOW.

The Ohio fanciers are active in their support of the exhibition to be held at Columbus February 10-15 under the auspices of the Ohio branch of the American Poultry Association. It is proposed to make this state show, to

Hon. G. R. Hasswell, President.

be held at Columbus each year, one of the leading and most important poultry exhibitions of the country. There is not another state in the Union having so great a number of active, progressive and successful fanciers as has Ohio.

The cash premium money allotted for this show is a very liberal amount. There will also be the American Poultry Association medals and state and national club cups and medals. The show will be cooped by the Empire Cooping Company. H. P. Schwab and Thomas F. Rigg will place the awards. It has been decided to hold a poultry institute in connection with the show. On Thursday and Friday, February 13 and 14, there will be lectures, either at the Ohio State University or downtown, both in the afternoon and evening. The lecturers will be: Prof. James E. Rice of Cornell University, Ithaca, N. Y.; Prof. Nix of Homer City, Pa.; Grant M. Curtis of Buffalo, and Ross C. H. Hallock, secretary of the American Poultry Association. Prof. Nix will deliver his famous lec-

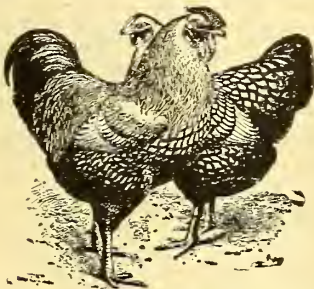

ture on "Incubation and Brooding." The officers of the association are: President, George R. Haswell of Circleville; first vice president, B. J. Hill of East Akron; second vice president, J. E. Gault of Sycamore; secretary, Chas. E. Cram of Carey; treasurer, Charles McClave of New London. Executive committee—C. M. Emerson of Columbus; Ira C. Keller of Prospect; S. T. Campbell of Mansfield, A. H. Hosterman of Springfield; Joe Coleman of Bellville; George Wendt of Kenton.

\$1,000 IN PRIZES TO CLUB MEMBERS.

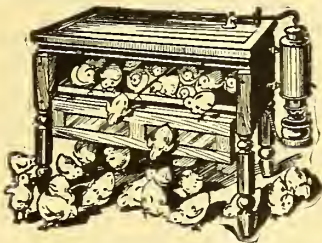

The National White Wyandotte Club is offering \$100 at the Springfield Fanciers' Club Show, of Springfield, Mass. (Eastern Section); \$100 at the Madison Square Garden Show, New York city (Central Section); \$100 at the Lincoln Show, Lincoln, Neb. (Western Section); \$100 at the Dallas, Texas, Show (Southern Section); \$100 at the Guelph, Ontario, Show (Canadian Section); besides a beautiful Silver Loving Cup for the best cock, cockerel, hen and pullet in every state having ten or more members outside of states where \$100 specials are offered; competition being open to any member of the club, without regard to place of residence.

Shoemaker's Poultry Book AND ALMANAC FOR 1908

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS, showing them in their natural color.

Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management, and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

ALL ABOUT INCUBATORS and BROODERS with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to any one interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICKENDOM, and no one can well afford to be without it. Will be mailed to any one upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER,
Box 1249, Freeport, Ill.

as well as four handsome silk ribbons at every show in the country that will print the club notice in their premium list. Surely no other club is offering the inducements to its breeders that the White Wyandotte is doing.

Now, let us all do our duty. It pays to show a good big string, but if you cannot show a big string, at least take or send a few. Show at your local or county show. Show at your state show sure and don't fail to show at one of the big sectional shows. Cleveland, Ohio, gets the annual club meeting and with the liberal prizes and cash specials offered we can look for a great show of White Wyandottes there. President Graves has been employed to judge the White Wyandottes at Cleveland, Ohio, and possibly at Lincoln, Neb.

Now, let us all turn out at the shows with a club badge showing our colors. (Mail me a ten-cent piece in an envelope and I will send you a handsome club badge that you will be proud of and not a cheap button), and make sure of the first breed Standard. Don't let the other fellow show because if you do another breed will show us.

It was decided at the last annual American Poultry Association meeting at Niagara Falls that a Breed Standard should be gotten out in 1908 for the

FOUR DOLLARS

yearly profit from each hen guaranteed by using LITTLE GEM HATCHERIES and my BIFOLD SYSTEM. All fertile eggs hatched and every chick raised. Hens safely forced to lay over 30 eggs a year each. A PERFECT poultry food made for 8 to 12 cents a bushel, and fowls fattened 3 to 4 pounds in 20 days. CONVINCING PROOF sent free. F. GRUNDY, Expert Poultryman, MORRISONVILLE, ILL.

YOUR poultry profits depend upon the way you feed. The above figures are based on actual experience. One side represents a dead loss; the other a big profit. Cut Green Bone made the difference. It is the cheapest as well as the most productive of all poultry feeds. Nothing else will produce so many eggs.

Humphrey and Cutter

is sold on a positive guaranty to cut more bone, in less time, with less labor than any other bone cutter made. Try it and see. The only bone cutter with an open hopper, easily cleaned.

Takes in bones of all sizes, wastes nothing.

No partitions, springs or complicated parts. You turn it with one hand. It is the simplest, the most durable and most effective. We charge nothing extra for a free trial of the Humphrey

Don't think green bone "too much trouble." You can easily get all you need and you can easily prepare it for use if you get a Humphrey—the easy turning bone cutter. Don't buy a bone cutter until you get our offer. It will pay you to investigate. Write today.

Get Our **FREE** BOOK

of Poultry Helps, describing our line of Bone Cutters, Rapid Clover Cutters, Brooders, Grit Mortars, etc.

HUMPHREY, White St., Factory, Joliet, Ill.

breed having the largest number of birds exhibited after November 1, 1907.

Now we as breeders of White Wyandottes and members of the largest single variety poultry club in the world cannot afford to lose out on the first Breed Standard. The value of success in this matter cannot be estimated. Just think what it will mean to have our favorites again pointed out and

acknowledged all over the world as the most popular breed, besides all the write-ups and advertising that will go with it. Already other breeds and clubs are hard at work in this great race but I do not believe our brotherhood of White Wyandotte breeders will ever let them beat us. We stand at the head now. Let us make sure that we stay there.

H. P. Rankin.
Hartington, Neb.

THORNTOWN, IND.

The Central Indiana Fanciers' Association will hold their sixth annual exhibition at Thorntown, Ind., Dec.

16 to 21, 1907. This is always one of the largest and best shows in the central West. They offer good premiums besides about 40 cash specials. Also about twenty variety clubs have offered their club specials.

Remember the date and send some birds. At least write for premium list. W. W. Zike, Morristown, Ind., will do the scoring. This is a good show to sell, as Thorntown and vicinity is full of chicken cranks. E. J. Barker, Pres. Peter S. Hurt, Sec., Thorntown, Ind.

WASHINGTON, D. C.

The Columbia Poultry and Pigeon Association will hold their next annual show in the Masonic Hall, Washington, D. C., during the week of January 6 to 11. The premium list is completed and ready for mailing. The Washington Show of last winter was more than successful. Even greater things are hoped for at the coming show. Write to the Columbia Poultry and Pigeon Association, 714 Twelfth St., N. W., Washington, D. C., for a premium list.

AMERICAN BLACK MINORCA CLUB.

American Black Minorca Club Meets
With the Cleveland, O.,
Poultry Show.

At a recent meeting of the Board of Directors of the American Black Minorca Club the vote was unanimous in favor of holding the next annual meeting of the club with the Cleveland Poultry Show. Thirty-nine new members were added to the club and we now have another long list of applications for membership to vote in soon. The club is now collecting specials to offer at its meeting and all signs point to a profitable and interesting gathering. All reliable breeders of Single Comb Black Minorcas are invited to join the club, share its benefits, exhibit at the annual meetings and compete for its specials. The club also gives many silver cups this winter to be competed for in different states. The secretary will be glad to send application blanks to all who write for them.

Geo. H. Northrup, Sec.
Racerville, N. Y.

BUFF ORPINGTON CLUB CATALOGUE.

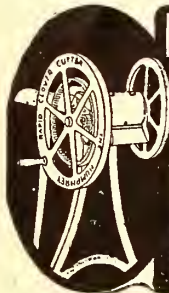

The new 1908 club catalogue of the National S. C. Buff Orpington Club is now ready for distribution and a copy will be mailed to any one interested in poultry raising. This catalogue is the best book ever published on Buff Orpingtons and will interest anyone whether they breed buffs or not. The club has doubled its membership in the last two months and is classed as one of the leading specialty clubs in America. Address the secretary, Will H. Schadt, Goshen, Ind., for a copy of the catalogue.

AMERICAN LEGHORN CLUB SPECIALS.

The following club cash specials will be offered in connection with the New York Poultry Show to be held in Madison Square Garden, New York, December 17 to 21, 1907, on varieties of Leghorns: \$10 cash for best display of one variety; \$3 cash for best cock; \$2 for second best cock; \$3 cash for best

40 BREEDS Fine, pure bred chickens, ducks, geese and turkeys. Northern raised, hardy and very beautiful. Largest poultry farm in the Northwest. Fowls, eggs and incubators at low prices. Send 4c for fine 76-p. 14th annual poultry book. R. F. Neubert, Box 844, Mankato, Minn

For Big Poultry Results

Feed cut clover or alfalfa—the cheapest and most productive poultry food for winter feeding. Great for all poultry—especially ducks. Don't buy so-called "clover-meals"—half dirt and dust. Cut it yourself with a new

HUMPHREY Rapid Clover CUTTER.

Cuts finer, more rapidly and more easily than any other. Fine enough for young chicks—no pieces over $\frac{1}{8}$ inch. Double knives, strong and durable. Unlike any other.

Send to-day for "Poultry Helps." Humphrey's new book of Poultry Specialties. It's free and it's all right. Address

HUMPHREY, New Street Factory, Joliet, Illinois.

Owen Farms 1907 Chicks

GET BUSY.

The National Rose Comb White Leghorn Club offers at all large shows silver cups and handsome silk badge for best males and females, and also for best pens. The club catalogue will be sent to all that ask for it, as it contains valuable information to all breeders of this grand variety. Our next annual meeting will be held in connection with the National Fanciers' and Breeders' Association Show, held in January at Chicago, so if you are not already a member, better join at once, as only club members will be allowed to compete for the grand specials offered by the club. Membership fee, \$1. John J. Peters, Sec., Lincoln, Ill.

AMERICAN POULTRY ASSOCIATION EXECUTIVE BOARD MEETING.

By order of President C. M. Bryant, a meeting of the Executive Board of the American Poultry Association will be held in New York city Friday morning, December 20, at 10 o'clock.

It is expected that some important work will be planned at this meeting.

Also all applications for membership received up to that time will be acted upon by the board.

Ross C. H. Hallock, Secretary,
St. Louis, Mo.

AMERICAN PLYMOUTH ROCK CLUB.

The American Plymouth Rock Club will hold its seventeenth annual meeting in connection with the New York show at Madison Square Garden on Wednesday, December 18, 1907. All members and fanciers are cordially invited to attend. H. P. Schwab, Sec., Irondequoit, N. Y.

NOTICE TO GOLDEN WYANDOTTE BREEDERS.

The National Golden Wyandotte Club will give four ribbons at each of twenty-five of the leading shows of the United States and Canada this winter. These ribbons are to be competed for by club members only. All breeders of this variety are asked to join the club now so as to be able to compete for these prizes. A. W. Davis, Secretary, Big Rock, Ill.

THE MID-WEST BRANCH.

Members of the Mid-west branch of the American Poultry Association here very recently voted to make the temporary organization permanent, and elected officers as follows: President, Thomas F. Rigg, Iowa Falls, Iowa; secretary-treasurer, Fred L. Kimmey, Morgan Park, Ill. Executive board—Miller Purvis, Peotone, Ill.; Theo. Hewes, In-

dianapolis, Ind.; F. H. Shellabarger, West Liberty, Iowa; J. M. Williams, North Adams, Mich.; E. G. Roberts, Fort Atkinson, Wis.

AMERICAN POULTRY ASSOCIATION OFFICIAL ANNOUNCEMENT.

To Whom It May Concern:

All complaints of members of the American Poultry Association, regarding the work or conduct of licensed judges of the American Poultry Association, while employed professionally, are to be sent to the Secretary-Treasurer for action.

Charles M. Bryant,
President American Poultry Association.
Ross C. H. Hallock, Secretary-Treasurer.

Poultrymen all over the United States will be glad to know that at the autumn meeting of the Board of Trustees of Cornell University there was created a chair of Professor of Poultry Husbandry, and that Mr. James E. Rice, who has been acting as assistant professor of poultry husbandry, a branch of the division of animal husbandry, has been selected to fill the

DARLING'S FOODS

You are more interested right now in egg getting than in any other part of the poultry business. There is going to be big money in eggs from now on until Easter.

Right here is where our business fits into your business.

We are up on the matter of feeding for egg production. We have been working on it as a specialty for years. We have availed ourselves of the teachings of the Government Experiment Stations. We have had practical poultrymen experimenting and working for us. We have studied food ingredients, especially those of high protein content, and learned how to combine the elements in order to get best results in eggs.

Darling's Laying Food

is the result of all our efforts. Experienced poultrymen agree that it is the best thing of the kind on the market today. It is a one-purpose feed, prepared and sold specially to secure a greater egg crop. Try a shipment. See prices below.

Darling's Laying Food,	\$2.00	Darling's Mica Crystal Grit	\$0.65
Darling's Scratching Food,	2.00	Darling's Beef Scraps,	2.75
Darling's Forcing Food,	2.00	Darling's Chick Feed,	2.50
Darling's Oyster Shells,		\$0.60	

All in 100-lb. Sacks, f. o. b. Chicago or New York. Cash with order.

"FILL THE EGG BASKET"

is a practical little book which embodies the best known teachings on the subject of egg getting. We have been publishing this book for a number of years, having issued several editions of it. If you have never seen it send for a free copy. You will find it concise and practical, and a great help in poultry feeding.

Our Poultry Supply Catalog should be in every poultryman's hands. It lists a complete line of standard Poultry Supplies and Appliances. A copy free. Address

DARLING & COMPANY, Box C, Union Stock Yards, Chicago. Box C, Long Island City, N. Y.

BUFF ORPINGTONS

Gold Nugget Strain. Fine bunch of ckls. for sale, but will only have a few pullets, as I am going to stock a large farm in 1908. First come, first served.

Fred E. Wright, 64 W. S., Monmouth, Ill.

place. Poultrymen all over the country are beginning to awaken to the value of more knowledge in poultry keeping, and when we find a board of trustees that has on it a man like Hon.

F. E. Dawley, who is interested in poultry breeding, who will bring this matter to the attention of his associates, we find that the colleges are taking up the work of poultry keeping and giving it the attention which it deserves. Mr. Dawley has been a member of the Cornell Board of Trustees for six or eight years and from the beginning has worked quietly but assiduously to place poultry keeping on a fair basis with the other branches of animal industry and he should certainly be satisfied with the result attained.

DO YOU WISH THE BEST IN W. PLY. ROCKS?

Every chick we have has some blood of the best male of this breed ever produced. Write for proof. Young stock after Oct. 1. A few yearlings left

C. C. FAIRBANK - - SAYBROOK, CONN.

**STANDARD WYANDOTTES****IN COLORS**

BY I. W. BURGESS WILL APPEAR IN THE INLAND beginning with December 1907 and continue until May 1908, giving two pictures 4 1/2 x 7 inches each issue in four colors, making 12 in all. Accompanying this work will be Articles from Theo. Hewes on the important changes made in Wyandotte type. You must see this to appreciate what we have outlined for your benefit and at our expense, absolutely, as these illustrations do not represent any ones birds, but appear for educational purposes only.

Do not miss the first number of this series. No such work has ever appeared in any paper. All of it is original and we want you to send for Sample Copy. It is FREE.

LEE'S NEW ENGLAND AGENTS:
H. E. FISKE SEED CO., 12-13 FANEUIL HALL SQ., BOSTON, MASS.

The following named judges will place the awards at the New York Madison Square Garden show, December 17-21:

C. M. Griffing, Shelter Island, N. Y.; George H. Burgott, Lawton Station, N. Y.; Richard Oke, London, Canada; W. C. Denny, Rochester, N. Y.; Thomas F. Riggs, Iowa Falls, Iowa; William R. Graves, Springfield, Mass.; W. W. Babcock, Bath, N. Y.; Dr. J. S. Wolfe, Bloomfield, N. J.; H. P. Schwab, Rochester, N. Y.; Eugene Sites, Elyria, Ohio; Chris Kirshler, Newark, N. J.; J. H. Drevensedt, Red Bank, N. J.; George H. Northrup, Raceville, N. Y.; Charles M. Smith, Brooklyn, N. Y.; M. S. Gardiner, Auburn, N. Y.; Charles McClave, New London, Ohio; A. F. Pierce, Winchester, N. H.; D. A. Nichols, Shelton, Conn.; John D. Jaquiss, Watervelt, N. Y.

On our return trip from the Jamestown Exposition we had the pleasure of visiting the farm of O. E. Remsen, Annapolis, Md. This farm consists of 360 acres of the finest soil in the country, and is well adapted for the raising of poultry on a large scale. The Black Minorcas were of a type that we rarely see, and the White Wyandottes are simply wonders. Their winnings at the late Hagerstown Fair were first, second, fifth hen, first cock, first cockerel and special for best male and female in the entire show on Black Minorcas, and on white Wyandottes, first cock, first hen and several other prizes. This should convince the most exacting that O. E. Remsen is one of the foremost breeders in the country. Anyone interested in the above variety should address O. E. Remsen, Box 176B, Annapolis, Md., and mention American Poultry Journal.

The committee of the American Poultry Association for the organization of a bureau of lecturers on poultry topics to appear at farmers' institutes, poultry meetings and other places, request that each lecturer throughout the country who may be desirous to serve in this work, write direct to Mr. Geo. D. Holden, Owatonna, Minn., sending in their name and address, with a list of topics, references, also record of previous appointments where they have spoken. The sooner this has the attention of all who may be interested the more speedily can the list be completed and published.

The Alaska-Yukon-Pacific Exposition, the next world's fair after Jamestown, will open at Seattle June 1, and continue till October 15, 1909.

The grounds of the Alaska-Yukon-Pacific Exposition occupy 250 acres of the campus of the University of Washington, a state institution.

Woman's Home Department

MABEL BATES WILLIAMS, Editor

This Department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others, a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it. All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 South Clinton Street, Chicago, Illinois.

THE CHRISTMAS MONTH.

There is an old saying that anticipation is better than realization. According to this, the month preceding Christmas should be the happiest time of the entire year. In a sense it is, but of late years a spirit has gradually been creeping in which threatens to destroy the sweet, old-time thought of giving. We spoil its beauty by placing on our Christmas

which has been given grudgingly, yet we prize beyond words the simple gifts of the children, crude and imperfect as they are, because we know that they come from loving hearts.

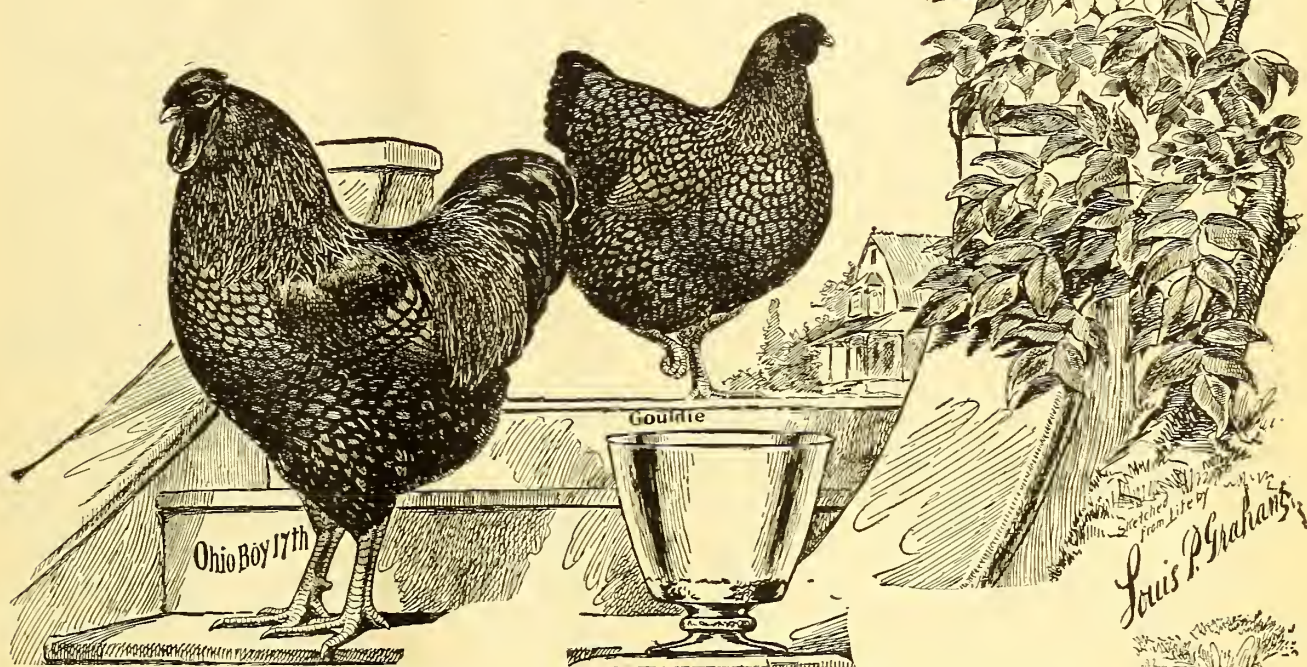

Then let this Christmas be a day of remembrance. Write a note to the lonely old man or woman who feels left out of the youthful gayety of the holiday time. Remember by a line the dear old friend, dear still but half forgotten in all the rush and hurry of

round cakes, frosted and rolled in shredded cocoanut to represent snowballs, cookies cut in fancy shapes and frosted in different colors, will all do their share in making the tree a delight to the little ones, and, unlike the old proverb, they can have the pleasure of "having their cake and eating it too," for the tree will hold enough to last during the entire holiday week.

Did you ever, when you were a little girl, fold a long strip of paper, and with one cutting develop a long string of paper dolls, all holding hands? This year cut half a dozen strings of these for your Christmas tree, making some of them in the shape of boy dolls, some like little fairies, and add them to the Christmas tree decorations. They will please the children far more than expensive "store trimmings."

EXPERIENCE DEPARTMENT.

Mrs. B. H. Y., of Auburn, Pa., writes: "How many of the American

First prize Golden Wyandotte Cockerel and Pullet at New York, owned by Ira C. Keller, Prospect, Ohio.

shopping list the names of many who must receive presents because of some fancied sense of obligation, or because we must "pay back" the gift with which they remembered us last year. We are hurried and worried, and the remembrances which we really wish to make are limited, in order that we may fill a long list of presents, which will be received in the same unloving spirit with which they are given. Is this an exaggerated statement? Perhaps it is an extreme case, but there is no one who does not have at least two or three such gifts on her list this year. Would it not be a beautiful thing if we would all develop enough moral courage to revise our lists, and to carry out in the giving the truth which we believe, deep in our hearts, that the true Christmas giving consists not in those things which represent material value, but rather loving thoughts and wishes? None of us care for a remembrance

life. Send a word of cheer and good wishes to the young man or woman who has gone out into the great world to fight the battles of life alone. And if there is a little child near by whose Christmas lacks what so many children's lives overflow with, give it a kind word, a trifling toy, or a little cake of your own baking, so that it may not feel itself forgotten. The day will be full of opportunity to add to the cheer of the world if we will only look for it.

Christmas is not the real holiday of our childhood if there is not at least a tiny tree, to be decorated with bright bits of tinsel, with cotton snow, and glittering mica frost crystals, with strings of popcorn and cranberries. If you want something a little different in the way of decorations this year, to please the children, try a cookie tree. Gingerbread boys and girls, pastry baskets, holding doughnut balls, little

Poultry Journal readers ever think of using their empty spools, instead of burning them up? I always utilize them for clothes pegs in closets, and find them much better than nails, which often cut the loops of clothing, or leave rust marks on it. Get long wire nails with good, large heads, and drive through the holes in the spools. If possible, use spools of uniform size, as they look better. Put some within reach of the younger members of the family and train them to hang up their wraps, instead of throwing them carelessly down, as so many children do.

Says Mrs. George M. P., of Chilli-cothe, Ill.: "I wish every reader of this department could enjoy such a club as I belong to. We are all busy women, and feel that we cannot give time for purely literary purposes once a week, but a little band of congenial friends meet every two weeks for a couple of hours on Friday afternoon.

PARIS FASHIONS

For Readers of

American Poultry Journal

The American Poultry Journal will supply its readers with perfect fitting, seam allowing patterns from the latest New York and Paris designs, at the low price of 10c for each pattern. Full directions how to cut and how to make with each pattern. Our large book of Paris fashions—80 pages—containing the illustrations and descriptions of 1000 seasonable styles for ladies, misses and children costs 5c for postage alone—we sell it to our readers at 10c, postage paid by us, in order that they may have a reliable guide to fashions.

A Pattern Free. Free Fashion Book

Get us just one new subscriber to American Poultry Journal at 50c for the year, and we will send you free any of these patterns and our large fashion book.

STYLE A.

2148—Ladies' Waist, with girdle, three-quarter length sleeves and body lining. Checked velvet, shepherd's plaid or plain colored voiles are adaptable to this pattern. Seven sizes—32 to 44.

2150—Ladies' Thirteen-Gored Flare Skirt, closed at left side of front. A habit back model suitable for any of the winter materials. Seven sizes—22 to 34.

2157—Childs' Dress, with Guimpe. Plain and striped French flannel are prettily combined in this model. Four sizes—3 to 9 years.

2131—Ladies' Tucked Shirt-Waist, with Applied Yoke. This charming and unique design answers all the purposes of an ordinary shirt-waist developed in brilliant plaid taffeta silk. Six sizes—32 to 42.

2153—Misses' Seven-Gored Tucked Skirt. Voile crepe de chine and serge make up well in this pattern. Three sizes—13 to 17 years.

2145—Girl's Coat. Leaf green broadcloth is an excellent material for the development of this original model. Four sizes—6 to 12 years.

2167—Misses' Jumper Waist, with a separate yoke guimpe, having elbow sleeves with or without the ruffles. Challis, voile, cashmere or crepe de chine may all be used for this model with good effect. Three sizes—13 to 17 years.

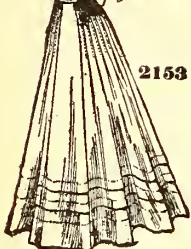

2156—Ladies' Gored Circular Skirt, with or without centre-front seam and in round or ankle length. Suitable for striped or plain cheviot or serge. Six sizes—22 to 32.

2139—Childs' One-Piece Dress, closed at centre-back. A stylish little frock in scarlet mohair. Five sizes—1 to 9 years.

2140—Ladies' Tucked Shirt-Waist. Taffeta silk or voile or cotton crepe develop well in this style. Six sizes—32 to 42.

2163—Misses' Semi-Fitting Coat in three-quarter length. Oxford suiting is very stylish for these separate coats. Three sizes—13 to 17 years.

2133—Ladies' Lounging Gown. Flowered challis, clune silk or Chinese crepe are all adaptable to this style. Four sizes—32, 36, 40 and 44.

We gather around the dining room table with our work, and one of the members reads aloud, while her darning is that week shared by the other members of the club, so that she does not lose the benefit of the work hours. Tea and wafers or little cakes are the only refreshments served, and these are placed on the table where the members can sip and work at the same time. We do not attempt to read profound articles, as we all feel the need of relaxation, rather than something requiring mental effort, but a bright story or some novel that is attracting widespread comment is chosen for our reading. Before we organized our club we thought that we did not have time to be neighborly, but now there is a spirit of friendliness and kindness, of helpfulness and cheer on our little community, which is one of the bright spots in all our lives.

Miss Mollie W., of Big Rapids, Mich., gives some excellent cooking hints. She writes: "I live on a farm several miles from Big Rapids and have been mother's chief assistant for several years, not only in caring for our fine flock of Leghorns, but in the house as well. We cannot get to town more than once in a couple of weeks, and often find our shelves growing bare of the little delicacies which add so much to our daily bill of fare. There are always plenty of good, wholesome farm vegetables on hand, however, and I enjoy serving them in new ways. We are very fond of turnips, for instance, and do not have a chance to weary of them, for I have half a dozen different ways of cooking them. We like them boiled until nearly done, then sliced thin and put in a baking dish with a dusting of fine bread crumbs, bits of butter, pepper, salt and a cupful of good meat broth poured over them. They should be cooked a golden brown and served in the dish in which they were baked.

Creamed turnips are delicious. After boiling them till tender, cut them in little cubes, put them in small individual dishes or in a larger baking dish, pour a cream sauce over them and bake for fifteen minutes. They can also be served like creamed carrots or asparagus, by cooking them, stirring them into a cream sauce and serving at once. Just a couple more: Turnips which were cooked the day before can be warmed over by frying the slices in butter or beef fat. They also make very pretty cups for a vegetable salad. Use medium-sized turnips, pare them and boil slowly till tender. Scoop out the centers, let them get very cold and fill with a vegetable salad consisting of bits of any left-over vegetables, garnished with pickled beets cut in fancy shapes. Use a cooked dressing.

Mrs. L. D. K., of Pt. Richmond, N. Y., tells of her quick method of cooking sugar pumpkins for pies. She has a meat grinder, which, by the way, is one of the greatest labor savers a household can have. She cuts the pumpkin into small pieces after paring it, and runs them through the grinder, puts them on the stove with only enough water to wet the bottom of the dish, and she says it is surprising how quickly the pumpkin is cooked down and ready to use. When the oven is hot she prefers baking the pumpkin to cooking on top of the stove.

Mrs. T. R. French, of Bayonne, N. J.,

gives a helpful hint for the Experience Department. She says: "Have you eaten soggy, indigestible custard pies, the bottom crust soaked till it is a flabby paste, and resolved that you will never, never make another? Just try my way when you get today's dinner, and you will never complain again. Put a pint of milk in a small saucepan and add a pinch of salt and half a cup of sugar. While this is heating, beat three eggs thoroughly and the moment the milk begins to boil take it from the stove and pour it over the eggs. Pour the mixture quickly into the pie tin, which has previously been lined with a rich, light paste, sprinkle grated nutmeg over the top and let it bake in a rather slow oven. When done the

custard will be of just the right consistency, and the pie will not soak a particle, even though it has to stand several hours.

Here are some condensed bits of wisdom from Mrs. B. P. Rice, of Norfolk, Va.: "Stop up mouse holes with corks dipped in carbolic acid, and the little pests will soon leave your home for happier hunting grounds. When the chimney catches fire, throw a generous lot of salt on the fire in the stove. The resulting gas will extinguish the blaze. When baking shells for custards and lemon pies they will not pull up if you lay a sheet of waxed paper over them and fill with bits of bread which you wish to toast for croutons in soup. In this way you can get two things done at one time to the mutual good of both. We are very fond of "pulled bread," which we use instead of fresh bread at least twice a day. It is nothing more or less than bread which is broken or "pulled" from the loaf in small bits, instead of being cut, and dried very slowly in a rather cool oven till it is crisp and golden brown all the way through.

The latest fad among the Parisians of a sporting turn of mind is cockroach races in eggs.

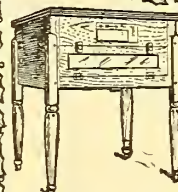

E. J. Barker, the Light Brahma specialist, of Thorntown, Ind., reports a fine lot of birds now ready for shipment. He has about 100 extra fine breeding hens and a dozen cock birds for sale at bargain prices if taken at once, to make room for his young stock, a grand lot of cockerels and pullets and a few exhibition cocks and hens that will be conditioned for the show room before shipping if desired.

At the Jamestown Exposition poultry show, October 23-November 1, Mr. Barker made only five entries (one entry in each class) and won five prizes, including first pen, second cock, second hen, fifth cockerel and fifth pullet. Anyone desiring first-class Brahmas are requested to write Mr. Barker for prices.

THE NEW WAY TO HATCH

This is the only Incubator invented in years that radically departs from the old hatching methods. The Handy Hatcher copies the process Nature employs—we accomplish this by doing exactly what all other incubator builders have tried to avoid. Results prove that in this department we have really solved the problem of true incubation and have the simplest, most perfect hatching machine ever devised. Write today for free catalog describing it. You'll be astonished and pleased with this unique idea and the way it works. THE HANDY HATCHER HATCHES LIKE A HEN

Complete 50-egg all metal Hatching & Brooding plant for only \$7.50. The only machine made that does the work in the natural way. Once filling the lamp hatches the eggs and broods the chicks.

\$7.50

METAL MOTHERS

Our new system \$1.00 Brooder works to perfection. No danger of fire, overheating or chilling the chickens. Let us tell you about our new way of keeping poultry to get the largest profits. Catalogue free.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: (1) Started in with Plymouth Rocks about eighteen months ago. I now have a lot of hens that are black, with a green cast, and I would like to know what you would call them. (2) Is clover or timothy seed good to give to chickens loose, or how would I prepare it for them? (3) What

L. Wyandotte eggs. Will these be all right to breed from as White Wyandottes? (3) I have a pullet and her main feathers in her wings seem to be on the side instead of being on the end. Will this harm her from showing? (4) How many chickens should be in a house 10x20 feet with a free run?

Moose Jaw, Sask., Canada. F. H.

Answer—(1) This is not an uncommon

and one cockerel with single combs. I bought two settings of a firm that had Partridge Rocks. Do you think he got the eggs mixed, or do the Partridge Wyandottes hatch or breed single combs occasionally?

J. M. P.

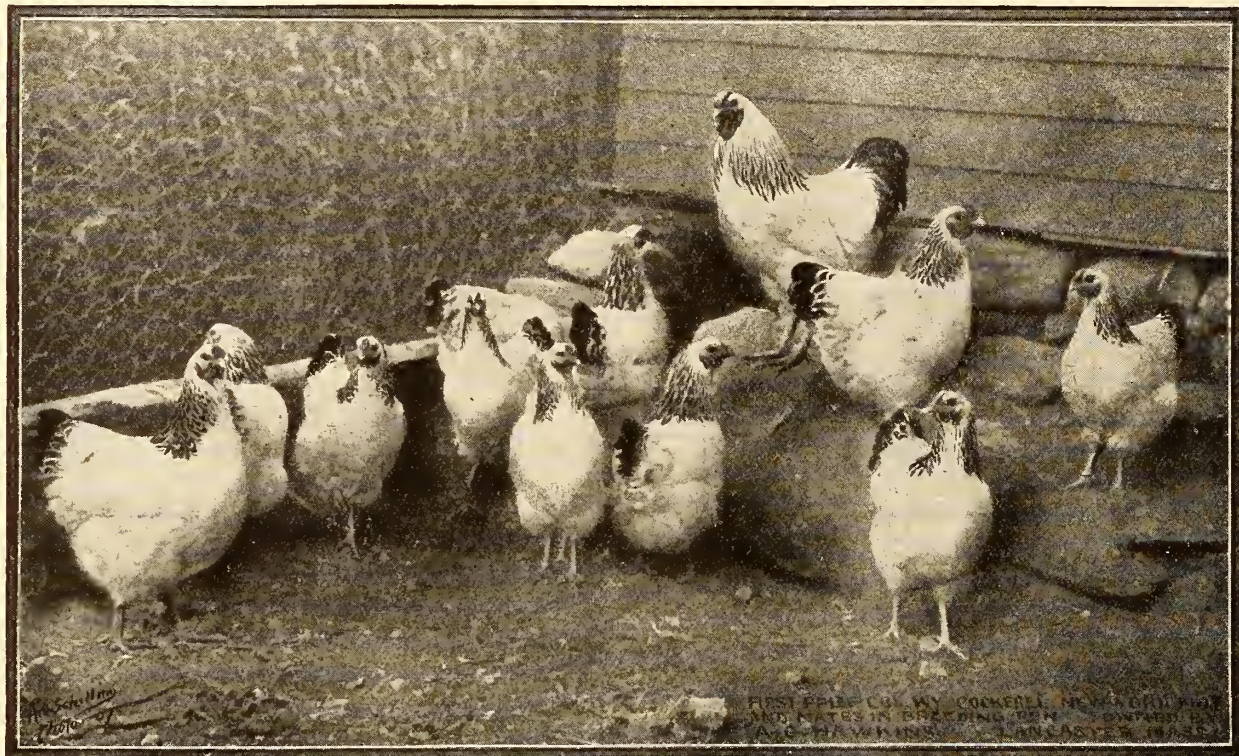

Rippey, Iowa.

Answer—It is no uncommon occurrence for Wyandottes of the different varieties to occasionally throw birds with single combs. Of course it is possible that the breeder got the eggs mixed.

Editor American Poultry Journal:

Dear Sir—Will you please give me your opinion of the following method of feeding in the next issue of your valuable paper?

About a year ago I decided to abandon the wet mash system, intending to feed dry mash. At that time I found

First prize Columbian Wyandotte cockerel at New York, 1907, with mates in breeding pen. Owned by A. C. Hawkins, Lancaster, Mass.

is the difference between a broiler and a fryer, and how old ought each one to be?

St. Louis, Mo.

D. W.

Answer—(1) If you had pure Plymouth Rocks to start with, the offspring are the same. You probably did not mate them properly. (2) Clover and timothy seed, mixed with other small grain is very good for little chicks, but is not of much use for mature birds, except to give them exercise in scratching in the litter for it. (3) There is not any difference, so far as age is concerned. The age is from two to four months.

Editor American Poultry Journal:

Dear Sir—Will you please answer me these few questions: (1) I have a Silver L. Wyandotte cockerel which was hatched in April and has not started to crow yet. He is big and healthy. What is the cause? Is it a common occurrence with this breed? (2) Out of my chickens this year I had a few White ones hatch from S.

mon occurrence with all varieties of poultry; but it usually denotes lack of stamina, and cockerels that are so backward in this respect usually make very poor breeders. (2) No. (3) Yes. (4) 35 to 40.

Editor American Poultry Journal:

Dear Sir—I have roup in my entire flock; can they be entirely cured of same, and if so, will they do to breed from when cured? Kindly answer in the next issue of the A. P. J.

Peru, Kan.

R. S. S.

Answer—A fowl that has had the roup is not fit for breeding purposes. You should dispose of your entire flock, thoroughly clean and disinfect your premises and procure new stock.

Editor American Poultry Journal:

Dear Sir—Will you kindly answer the following question: I purchased Partridge Wyandotte eggs of different poultry firms. I have 25 young chicks and among the 25 I have three pullets

it impossible to procure the ground grains I wished to feed, so begun feeding hard grains as follows: Morning, oats and wheat, half and half; noon, wheat; night, cracked corn; all fed in litter. Beef scraps, charcoal, shell and grit before fowls at all times. The results were so good that I continued feeding in this manner. I had remarkably high fertility last spring, chickens all healthy and strong. Do you think I would have had still better results had I fed a dry mash, other things being equal? As all the poultry raisers in my section feed either a dry or wet mash in connection with hard grains, I ask in the light of my experience the past year, is a mash necessary? My fowls are Barred Plymouth Rocks.

Bournedale, Mass.

T. J. C.

Answer—The hard grain feed is what we have advocated in these columns for years. It is the natural feed for fowls. Whenever a breeder starts feeding mashes, either wet or dry, he departs from nature, and while he may

Merchandise from Sheriffs' and Receivers' Sales.

THE CHICAGO HOUSE WRECKING COMPANY saves you 30 to 50 per cent on staple merchandise from **Sheriffs' and Receivers' Sales.** Wrecking Prices have come to be known as bargain prices. Here you have the most wonderful bargain offering ever advertised. Such an opportunity seldom occurs. The very best manufactured articles offered at less than original cost of production. That's our merchandising method. We do not buy our goods in the regular way, but take advantage of various sales to secure bargains. **Our mammoth plant is the largest in the world devoted to the sale of general stocks.** Increasing business has necessitated an addition to our already enormous institution. Over 35 acres literally covered with merchandise of every description.

We built our enormous business by giving our Customers Absolute Satisfaction

Winter Eggs---How to Get Them

Our new method of making chickens lay eggs in winter is cheap and simple to use. No expensive equipment or extra work. Don't winter chickens that lay their eggs in warm weather. Winter a laying flock. Our method will prevent fowls from eating their heads off during the long winter months. It will absolutely prevent and cure 90 per cent of all poultry diseases. Our recipe is free; send a postal today.

CHAS. SCHILD CO., - Box 166, Station C, CLEVELAND, OHIO

Coburn's Mammoth Poultry Farm

BREEDERS AND DEALERS IN LEADING VARIETIES OF LAND AND WATER FOWLS

Eggs and chicks of all the leading varieties. Eggs \$1.50, \$2 and \$2.50 per setting of 15, according to variety. Chicks \$16.00 per hundred; \$9.00 for fifty.

RURAL ROUTE 29 - - ST. LOUIS, MISSOURI

have splendid results for a time, the results will be disappointing in the end. If a breeder must feed a mash, we would say, feed it dry, but we do not believe a mash is necessary. Your results from mash feeding might have been as satisfactory, but we doubt it.

Editor American Poultry Journal:

Dear Sir—I am a subscriber to your paper and take the privilege to ask the following questions: (1) Is there any way to prevent scaly legs? If so, how? (2) Is a little white in the ear of White Orpingtons objectionable? (3) Is brassiness in white fowls a disqualification? (4) What is a good remedy for scaly legs? (5) Is there any prevention or cure for brassiness. (6) Will a brassy fowl moult out white and is brassiness hereditary? (7) What is the average weight for White Orpingtons? By answering these you will much oblige

H. C.

Pittsfield, Mass.

Answer—(1) By keeping your yards, houses and roosts in a clean and sanitary condition. (2) Yes. (3) No; but it is very objectionable. (4) Rub the parts daily with equal parts of vaseline and zinc ointment; or, in severe cases, with one ounce of sulphur, half an ounce of oxide of zinc, one dram of oil of tar, and two ounces of whale oil mixed together. Apply daily. (5) This can be prevented by careful breeding. (6) A brassy fowl will moult out white but will gradually turn brassy again as the plumage gets old. We believe it is hereditary. (7) The average weight of White Orpingtons is: Pullets, 7 lbs.; hens, 8 lbs.; cockerels, 8½ lbs.; cocks, 10 lbs.

Editor American Poultry Journal:

Dear Sir—Although a constant reader of your paper, I fail to find any one advocating the use of rye as a poultry food. Is there a good reason for this? Chicago quotations (Nov. 4) give approximately the following costs per 100 lbs.: Wheat, \$1.53; oats, \$1.50; barley, \$1.35; rye, \$1.33. Now is the husk of oats and barley of sufficient feeding value that we can afford to pay as much per pound for husk as we do for good, clean wheat and rye? Or does the husk perform any function which cannot be done as well or better by some cheap, rough food?

Cleveland, O.

C. R. M.

Answer—Rye has never been considered a good feed for poultry. There is no doubt but what oats would make the best feed if it were not for the hulls. But when the price is taken into consideration wheat will be found the best and cheapest feed of the four grains mentioned. In fact, we have always claimed that better results can be obtained from feeding best quality of whole wheat than from any other grain except hulled oats, and the latter is too hard to obtain.

Editor American Poultry Journal:

Dear Sir—Will you kindly tell me through your journal, of which I am a subscriber, whether it is better to introduce new males into a flock of chickens each year. I do not want to part with my roosters, as they are prize winners and difficult to get as good R. C. R. Island Red roosters unless I pay a big price for them, and no one around me is willing to give more for mine than for scrubs; yet I want to keep my flock up to the standard. Also in

last winter's issue of your journal I read something on the red turkey. Can you name some one who keeps them. Pittsburgh, Pa. Mrs. H. P. P.

Answer—It is not absolutely necessary to introduce new blood into your flock every year. By careful selection at mating time you can line-breed for two or three seasons without the addition of new blood. It is not necessary to sell your surplus in your immediate vicinity. Advertise your stock in some good poultry paper and if your stock is up to standard requirements you will not have any trouble in disposing of them at a fair price. By watching the advertising columns of American Poultry Journal you will see the advertisements of breeders of Bourbon Red turkeys.

Editor American Poultry Journal:

Dear Sir—Please answer the following question in your next issue: I am going in the poultry business near Louisville, on an electric and steam road. I have 3½ acres, houses and runs for 500 or more hens and small brooder house. We have a good market for broilers, but ducks sell for 11c on foot; can get 22½¢ per dozen for eggs the year around. Would keep 500 hens, raise 500 broilers and 200 ducks. Would have to buy all feed except green food. Have had experience in raising poultry. Would keep White Leghorns and White Rocks. If I had good luck, what profit could I make on this amount of stock? Would it pay me to ship to Chicago or New York?

Louisville, Ky. I. S. A.
Answer—Luck is not an element that enters into the success or failures of

poultrymen. It is simply a question of ability. We would not attempt to figure out the amount of profit that you could make on this amount of stock. This all depends on your own efforts and ability. It would not pay you to ship to Chicago or New York when you have a good market right at your door.

Editor American Poultry Journal:

Dear Sir—(1) Are bones that have been boiled in soup of any food value to chickens? (2) Are egg shells of any value to feed to chickens? C. E. H.

Chicago, Ill.
Answer—(1) No. (2) Yes, but they should be thoroughly dried in the oven before being fed.

Editor American Poultry Journal:

Dear Sir—Please answer the following in your question and answers department: (1) Have several Black Cochins Bantams, also some Buff Rocks that seem to have lost feathers on head. Skin is white and scaly. It does not make them droopy, but of course spoils their beauty. Can you tell me cause and remedy. (2) Have some chickens in flock with watery discharge from nostrils. Don't sneeze or have any other symptoms of roup. All have range of 200-acre farm and fed corn, oats, rye and wheat. Plenty of grit. Please answer and oblige.

Springfield, O. Mrs. J. C. C.
Answer—(1) This is caused by what is known as the depluming mite. A few applications of sulphur ointment, rubbed thoroughly into the skin will kill the mites and the feathers will soon grow out again. (2) This is a

catarrhal cold and if allowed to run may develop into roup. Procure some one of the various roup remedies advertised in these columns and give as directed. Every poultryman should have a copy of the Common-Sense Poultry Doctor, price of which is only 50 cents. For sale by American Poultry Journal.

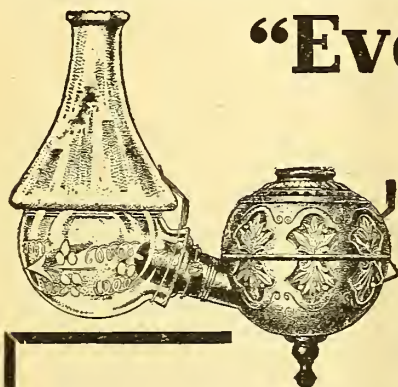

Editor American Poultry Journal:

Dear Sir—I wish you would kindly answer the following questions in the next issue of your journal: I am about to erect a poultry house and am at a loss to know whether to use cloth or glass front. The climate is quite cold and the house will have a southern exposure. Expect to keep but one variety, namely, White Wyandottes. How many birds will a building 20x60 feet accommodate? What can you say for or against a concrete floor?

Williamsport, Pa. G. S. T.
Answer—You will find the glass front much more satisfactory. A house 20x60 will accommodate about 150 fowls. A concrete floor with plenty of litter on it is the best floor that can be put in a chicken house.

Editor American Poultry Journal:

Dear Sir—Will you please answer in next issue of American Poultry Journal. (1) My chickens all are taking the sore head. They break out with little fine sores. I use carbolated petroleum. Two applications cure in the first stages; if let run any length of time their eyes will swell shut. I would like to know if this is roup or chicken pox. (2) How can I disinfect my place when I get rid of all these chickens, as

“Everyone Exclaims About Our Lights!”

“THE LAMPS are splendid. Everyone exclaims about the amount of light they give,” writes Mrs. W. T. Reese, Tiffin, Ohio. “My City friends visiting here say they are as good as Gas. In fact, my home is now considered the best lighted house in the county. Why, when we go visiting our neighbors of an evening it is hard to keep from exclaiming about the poor light they have!”

The Angle Lamp is the *new* method of burning common kerosene oil, and is as different from the ordinary lamps in *results* as it is in *appearance*. It makes common kerosene the best,

the cheapest and the most satisfactory of all lighting methods. Safe and more reliable than gasoline or acetylene, yet as convenient to operate as gas or electricity.

THE ANGLE LAMP

is lighted and extinguished like gas. May be turned high or low without odor. No smoke, no danger. Filled while lighted and without moving. Requires filling but once or twice a week. It floods a room with its beautiful, soft, mellow light that has no equal.

And yet the lamp *actually pays for itself*. For while the

ordinary round wick lamp, usually considered the cheapest of all lighting methods, burns but about 5 hours on a quart of oil, The Angle Lamp burns a full 16 hours on the same quantity. But send for our catalog “59” explaining the new principles employed in this lamp, and for our proposition for selling on

30 DAYS TRIAL

Wouldn't you like to have your home admirably referred to by your neighbors as “the best lighted house in the country”—if you *knew* such a light would cost so *much* less than your present system as to pay for itself in a few months use? Then write for catalog “59” describing The Angle Lamp fully and listing 32 varieties from \$2.00 up. It is free for the asking.

ANGLE MFG. CO., 159-161 W. 24th STREET, NEW YORK

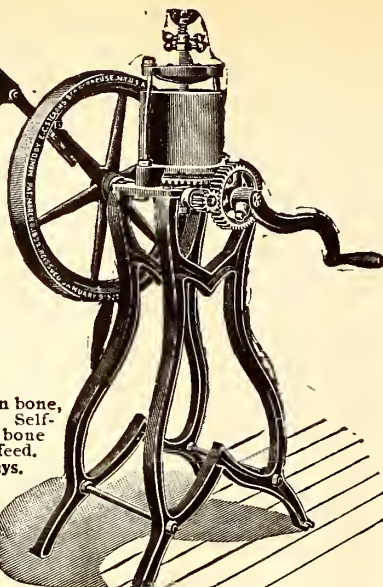

Turn Bones Into Money

By feeding your hens green cut bone you can get nearly as many eggs in winter, when eggs are high, as in the spring, when prices are low. Green cut bone doesn't cost any more than grain and, pound for pound, will make 18 times as many eggs as wheat and corn. This is why

STEARNS Bone Cutters

are money makers. They cut any kind of green bone, meat or gristle, easily, rapidly and finely. Self-cleaning steel cutter head that mills the bone with a clean shearing cut. Automatic feed. Made in ten sizes. Free trial for 30 days. Valuable booklet, "How to Make Poultry Pay," sent free.

HOPE, INDIANA

BUILT TO HATCH AND LAST

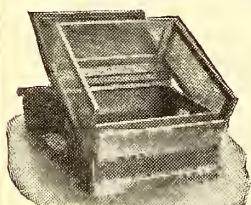

That describes my incubator fully. Built to hatch strong, healthy chicks that will "grow like weeds" from the very first day of their existence. I have been raising poultry for a good many years. I know just what an incubator and brooder should be, and I have included that knowledge in the WALLACE. I give you a whole season to try them, and in addition give you a five years' guarantee. The reason I can do this is because every machine that goes out of our factory is made right in every particular. The double case is

"Wallace Incubator"

made of first-grade California redwood—a wood that will not crack, warp or swell with the heat. Hot-water tank made of heavy cold-rolled copper that will last a life-time. Self-regulator

"Wallace Brooder"

value to you whether you buy my machines or not, and I want you to have one. Address, E. M. Wallace, Manager,

WALLACE INCUBATOR CO.,

Box 10,

St. Joseph, Missouri.

I do not want to keep one of them? (3) Can this disease travel in the air? Everybody's chickens around here have got the same thing that mine have.

Jenny Lind, Ark.

R. B. H.

Answer—(1) This is evidently chicken pox. This is a filth disease and is very contagious. You should at once thoroughly clean and disinfect your premises with a 10 per cent solution of carbolic acid. Begin treatment by bathing the affected parts with warm, soapy water. After drying thoroughly with a soft flannel cloth apply carbolated vaseline. A few treatments of this kind will usually effect a cure. (2) By thoroughly whitewashing the inside of your buildings and a liberal use of carbolic acid. (3) We do not believe this disease travels in the air, but the germs are easily carried from one place to another.

Editor American Poultry Journal:

Dear Sir—Please answer the following in your valuable paper: (1) Is spring wheat as good as winter wheat for poultry food? (2) How is rye as compared with wheat or oats for poultry food. (3) What is there against the Black Java? So few poultrymen keep them, and we read so little of them, yet for me they beat anything for laying that I have ever had or heard of, and are never sick, and as large as P. Rocks.

J. H.

Morristown, Mich.

Answer—(1) Yes. (2) Rye is not as good as wheat or oats for poultry. (3) There is no fault to be found with the Black Javas, and at one time they were very popular in this country, but like many another good variety have been crowded to the rear to make room for the new and more popular varieties of the present day.

Editor American Poultry Journal:

Dear Sir—Please answer the following questions in the November issue: (1) How many hens can I keep in a house 26x15 feet? (2) How many sunflower seeds can I feed to 100 hens a day? (3) What quantity of millet seed can be fed a day to 100 hens with safety? (4) Do you advise feeding blood meal to hens in winter? I have read that if fed blood meal they would lay as well in winter as in summer. (5) Do you know where I could get a pure kind of blood meal? (6) Have some hens with rough legs; have had such legs almost a year. Do you think it is scaly leg? It has not extended through the flock much; noticed it the first year after moulting. (7) I sent away to poultrymen this year for over 200 eggs and most all of them were rotten. What do you think was the cause? Some of the chickens which hatched were very delicate. (8) What is the matter with chickens that cannot stand on their legs after being hatched? Some get over it and some never stand; what is the cause? Some of the chickens which hatched from the eggs I got of these poultrymen were that way; could not stand and died. (9) What kind of feed do you have to feed chickens of large breeds to make them weigh 7 lbs. in five months?

H. L. H.

St. Croix Cove, Nova Scotia.

Answer—(1) About 50, depending somewhat on the variety. (2) Sunflower seeds are very fattening and should be fed very sparingly; only a small handful about three times a week to each

fowl. (3) Millet seed is also very fattening and is not a suitable feed for laying hens, except to afford them exercise by being scattered in the scratching material. (4) A small proportion of blood or beef scraps will help the egg yield during the winter months. (5) Any of the poultry supply houses can supply your wants in this line. (6) See answer to Mrs. J. C. C. in this issue. (7) The eggs being rotten show that they were fertile. The trouble was probably due to your method of incubation. (8) This is generally due to too much heat in the incubator; but is frequently caused by breeding from diseased stock. (9) We do not know of any feed that will produce a fowl that will weigh 7 lbs. at five months. A liberal feeding of oats will produce size, after which corn and wheat should be fed to produce flesh.

Editor American Poultry Journal:

Dear Sir—Please tell me in your question department where I can get a thermometer which will stand and register boiling water (I want to use it

in connection with a hot water tank incubator); also the name of a company that make hydrometers (moisture gauge), and oblige yours truly.

Elgin, Wash.

F. D.

Answer—Write to any of the poultry supply houses.

Editor American Poultry Journal:

Dear Sir—I am a reader of your valuable paper. I would be very grateful to you if you would give some idea on the following questions: (1) How to prevent frost on the inside of a hen house. (2) What kind of feed is best to feed laying hens? (3) Will oyster shells answer the same purpose as grit, or will hens have to have grit with oyster shells?

L. C. H.

Gouverneur, N. Y.

Answer—(1) By proper ventilation. (2) Wheat and oats. (3) Oyster shell will not answer the same purpose as grit. Where good grit is used oyster shells are not absolutely necessary.

Editor American Poultry Journal:

Dear Sir—Will you kindly answer

following in next issue of Journal? (1) What size should exhibition coop be for pen of fowls, American class? (2) About what size are call ducks at maturity? (3) Is whole wheat and cracked corn too fattening a food for chicks nearing maturity?

V. R. M.

Stillwater, Okla.

Answer—(1) 3x4 feet, inside measurement. (2) There is no standard weight for call ducks; but, all other points equal, the smaller specimens are given the preference. (3) No.

Editor American Poultry Journal:

Dear Sir—Please answer the following in your question department: (1) What is the lowest score safe to breed from? (2) Do poultry shows provide exhibitors with coops? If not, is it safe to ship birds in exhibition coops? (3) Is it safe to breed from a bird favorable in all sections, but off in color of legs?

O. A. S.

Put-in-Bay, O.

Answer—(1) 87. (2) Some do and others do not. By tacking muslin or burlap around the coops it will be safe

Exhibition Coops—Now Ready For Immediate Delivery

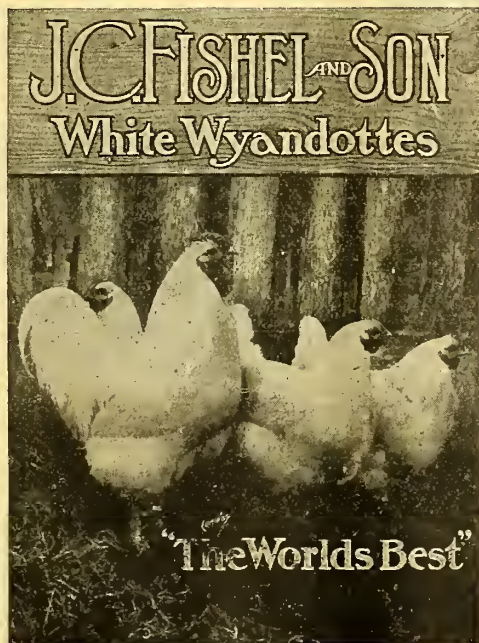

Prices: Single size, \$1.00 each, \$5.50 per half dozen, \$10.00 per dozen. Pen size, \$2.00 each, two for \$3.50 or six for \$9.00. Furnished complete with the proper size nails, tacks and cloth to cover. All coops are stained a rich mahogany color unless ordered without any finish. FREE with each order of 1 doz. single coops we will send without any extra charge one coop, pen size, or for \$6.50 we will ship ½ doz. single and one pen coop. Our coops are all machine made; the single coops are 24x24x30 ins., and the pen coops 24x48x30 ins., as called for in the American Standard of Perfection. Coops of any other size are very apt to be set in the back row at many poultry shows. The dowels are of the best yellow pine and the door slides all the way up, which will allow the bird to be removed without breaking the feathers. This means points in scoring. All coops are shipped flat and can be set together in a few minutes. They can be as easily taken apart after the show and packed away in a small space. Our coops are built strong and can be shipped from show to show with birds enclosed in perfect safety. Order direct from this advertisement or send for our booklet which tells more about them and also about our popular I. C. trap nests, shipping coops, automatic feed boxes and other poultry house fixtures. We make a specialty of cooping shows and make an eight-section coop that is just the thing for Poultry Associations. Secretaries, correspond with us. We also breed high scoring White Ply. Rocks and S. C. White Leghorns with trap nest records.

H. R. COOPER & COMPANY, MANUFACTURERS

SAGINAW, MICHIGAN, U. S. A.

WHITE WYANDOTTES

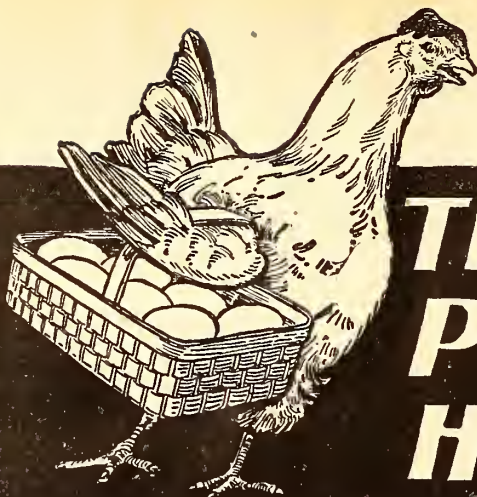

A strain with a reputation, bred in line and produces winners; bred to lay, produces color and will breed shape. In fact this is the whitest strain of birds in the world. 1,000 birds ready for the show room. Write us your wants.

We have just issued our new catalogue, 48 pages, with page after page of fine illustrations taken from the birds as seen in the yards. It contains a full list of prizes won by

The World's Best Strain

at such shows as Chicago, Pittsburg, Cleveland, Cincinnati, great World's Fair, St. Louis, Indianapolis, Nashville, etc. The catalogue is chuck full of valuable information how to feed and care for White Wyandottes. A valuable book worth dollars to you. Mailed for one dime (10 c)

J. C. FISHEL & SON Box J, HOPE, INDIANA

The Paying Hen

is the one which contributes 150 eggs or more in a year, toward the family grocery bill. The sure way to have such hens, eggs in abundance, and a lot of ready cash, is to give a little of

DR. HESS POULTRY PAN-A-CE-A

with the morning feed every day in the year. Dr. Hess Poultry Pan-a-ce-a is a tonic, the sole purpose and action of which, is to assist nature in the performance of necessary functions. It aids digestion, prevents disease, and sends the proper proportion of each food element to the organ most in need. It also contains germicides which destroy bacteria, the usual cause of poultry disease. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M. D., D. V. S.), and is a guaranteed egg-producer. Endorsed by leading poultry associations in United States and Canada. **Sold on a written guarantee, and costs but a penny a day for 30 fowls.**

RHODE ISLAND REDS AT JAMESTOWN

We won at the great Jamestown Exposition poultry show, where the class of Reds was red hot. Single Combs, 1st, 2d, 4th cocks; 4th hen; 3d cockerel. Rose Combs, 2d, 5th cocks; 4th, 5th hen; 1st cockerel; 1d pullet. Also special ribbons for shape and color, and silver cup for best R. C. Red male in the show. Cockerels for exhibition and utility breeders. A few female breeders for sale.

ROSEDALE POULTRY YARDS

PHILLIP CASWELL, Prop., Box A, NEWPORT, R. I.

to ship birds in exhibition coops. (3) This may be safe, but it is poor policy.

Editor American Poultry Journal:

Dear Sir—Would you kindly answer in your next issue the following questions: (1) How many points should the comb of a Leghorn cockerel and pullet have, and the color of the eye? (2) Should the points be deep and perfect, or doesn't that matter? (3) How many points should the comb of a W. Rock cock and hen have? (4) Does the weight of any fowl have as much to do with their exhibition qualities as other points? (5) Is sweet milk, buttermilk or clabber milk all good for all size fowls every day, as much as they care for? (6) Is a fowl with bumble foot good for eating? (7) Is cane seed left on the stalk and hung up a good way to feed it to hens for laying? The same way with Kaffir corn and sunflower stalks? Would that be a good way to feed corn and oats in their straw to work for? (8) Is sweet corn, dried, any better than field corn for hens? A. W. R.

Forrest, Ill.

Answer—(1) Five points. Red eyes. (2) They should be deep and as near perfect as possible. See Standard. (3) Five. (4) Yes. (5) Yes. (6) No. (7) Yes. (8) No.

Editor American Poultry Journal:

Dear Sir—Will you please answer through your paper the following questions: Last winter I had some chickens that their foot would swell and get hard, then turn and get soft, right on the bottom of the foot where the toes branch off from the leg. Now I have two ducks the same way. What is the matter, and is there a cure for it? I let them out during the day and shut them up at night, but they are on ground floor all the time. E. J. W.

Barborton, Ohio.

Answer—Dr. S. A. McWilliams, of Chicago, after making a very thorough study of cases of this character, pronounced it tuberculosis, and recommended that every bird showing symptoms of this disease be killed and the bodies burned to prevent spread of the disease, both in the flock and in the human family.

Editor American Poultry Journal:

Dear Sir—I wish to know if you have published any paper with Buff Rocks on the colored cover. (2) What is the address of the secretary of the Downers Grove Poultry Show and date of same? (3) Is there any book or paper published which treats exclusively on raising and preparing poultry for exhibition? (5) Should buff fowls be washed for exhibition? (5) Is there anything the matter with a pullet I have which seems to have a very large head and she has her feathers on her head standing on end? M. D.

Lockport, Ill.

Answer—(1) No. (2) Jan. 9-11, 1908. L. M. Cook, Sec. (3) No. (4) Yes. (5) This symptom is noticeable in several diseases, such as gastritis, diarrhoea, constipation and aspergillosis, but without further information we are unable to determine which one of these your pullet is suffering with.

Editor American Poultry Journal:

Dear Sir—Please answer the following in your next issue: I have a young S. L. Wyandotte hen about six months

old. I noticed about three weeks ago a ball about the size of a hen's egg on the second joint of her wing which she left hanging down later, and at the present time is very sore, and I find now the body is completely covered with small lumps about the size of a bean. Some are smaller and some are larger. They are formed at the quills of the feathers and they seem hard. Her comb is nice and red and her head seems to be in a healthy condition. Can you tell me the cause of this and what it is called, and is it contagious, and a cure for same?

N. M.

Turbotville, Pa.

Answer—This is caused by a diseased condition of the blood. Sulphur is very beneficial in cases of this kind. However, we would advise the use of the hatchet, as this fowl is not fit for table use, and, although she might be apparently cured, it would not be safe to use her for breeding purposes.

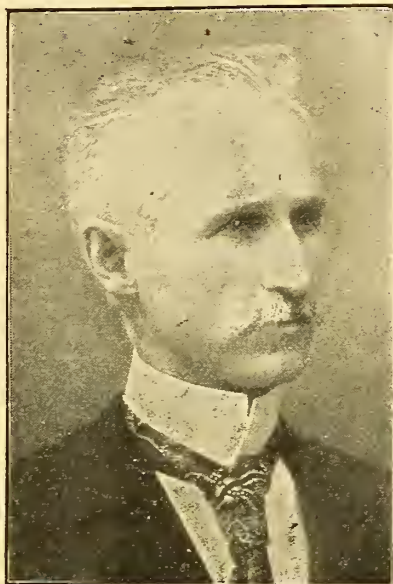

THE VALUE OF A "FRESH EGG."

There is no expression more commonly used, especially in our markets, than the familiar one, "fresh eggs."

The adjective "fresh" used with a noun must mean something, and by referring to Webster we find that an adjective is a word used with a noun to express a quality of the thing named, to specify or describe a thing as distinct from something else; hence when we use the adjective "fresh" to describe an egg it is intended that it is to express the quality of the egg and to specify and describe it from eggs not fresh.

The average person on hearing the expression "fresh eggs" merely thinks of but one thing, and that is an egg recently laid, possibly the day before. This is indeed true in one sense, but if we will again refer to Webster for a definition of the adjective "fresh" we will find this: "Possessed of original

life and vigor; new and strong; unimpaired; sound;" so we can readily see that this applied to an egg would indicate that an egg perfect, sound, strong and unimpaired, even if more than a day or two old, is much to be preferred to one laid possibly the day before under conditions that would not

Myron H. Bent, Antwerp, N. Y., inventor Bent's Milk Albumen for Poultry and breeder of Single and Rose Comb Black Minorcas.

permit it to be perfect even just a day old.

How many eggs are sold in our markets every day under that title "fresh" that are literally rotten, some partially incubated, some stale and others cracked and broken! And still this

is not the only class of eggs that cannot be properly termed "fresh." Would it not be much better to term "fresh" an egg that had been laid possibly a week, and know that this egg came from perfectly sanitary surroundings, where the hens were kept in perfectly healthy condition, and fed only pure grain and feedstuffs, than one, like the greatest majority of marketed eggs, gathered from the farm where the hens are practically unnoticed day in and day out and are forced to pick up just what they can, and actually, in an astonishing number of cases, fed nothing more nor less than actual slops and garbage gathered from the neighbors for the sole purpose of feeding the hens. The houses in which these hens are kept, never whitewashed, always damp and musty, and in a great many cases actually filthy.

The matter of "fresh eggs" is daily drawing more closely the attention of the henman, the egg farmer, the dealer and more especially the consumer. It is not an uncommon thing for a housewife to obtain from her grocer a dozen eggs and possibly three or more of these not at all fit for use, and consequently the eggs purchased thus furnish a very unpleasant anxiety.

Then again we must recognize the fact that we cannot produce these perfect eggs as we would have them and afford to market them the year around at just the ordinary market prices, the ridiculously low figures of 10, 12, 15 or even 20 cents per dozen. Surely a dozen perfectly fresh eggs are worth at least 25 cents in summer and from 35 to 50 cents in winter. Our broilers and roasters always bring better prices in proportion than do our eggs.

In order to obtain these better prices we must create the demand for the truly "fresh eggs" by educating our people to appreciate the true value of the product.

Nashville, Tenn.

BENT'S MILK ALBUMEN

Greatest animal food known. Hastens moult, matures pullets and makes winter eggs easy. TRIAL OFFER, freight prepaid east of Mississippi River. Endorsed by leading exper. stations and poultrymen. U. R. Fishel says: "Greatest egg producer I ever used." Send Postal to-day for folder and free sample. Agents wanted. Ask your dealer. Made only by THE BENT-CROSSIANT CO., 14 Main St., Antwerp, N. Y.

There Are Real Reasons Why it Hatches The Hardest Chicks

Reasons that you can understand. THE INCUBATOR WITH THE NATURAL HEATING SYSTEM, puts the heat on top of the egg, just as the hen does. An egg tray that is self-supported, no lifting about, cannot upset. (Note cut.) Thermometer that is get-at-able without opening the machine. We are not offering you the same old round of familiar "information." Our goods have the highest efficiency, quality, individuality. For catalogue write to

MONEY MAKING Poultry Foods

Profits in the poultry business are determined by the number and the quality of the chicks raised, fattened and sold or turned into egg-producers. The results will depend largely on the foods you feed. A haphazard feeding means uncertain results. Your little chicks, should be started off with No. 1 Midland Poultry Food for first two weeks. Then No. 2—the growing chick food—will take them along and keep them growing. If intended for market, No. 3 will put the fat on fast and give you early broilers. It will fatten your old hens for high prices in the shortest possible time.

MIDLAND Poultry Foods

take the lead with successful poultry raisers. No. 4—the great egg and feather food materially shortens the moulting season, keeps your hens in the best of health and starts them laying early in the fall. It makes eggs, lots of them. In the Midland line there is a scientific poultry food for every purpose—each prepared under an exact and never varying formula by one of America's greatest food experts—that's why they are every one of them money makers, they accomplish exact results. Feed them if you want to make more money out of your poultry. Our two poultry books, "The Science of Poultry Feeding," and "Poultry Fattening Perfected" are guide books to better profits. If you want these books free write for them today they will save you money and turn your poultry losses into profits.

White Ply. Rocks--Chicago Winners

Besides winning at Chicago in January, 1907, my stock made the unparalleled record of clean sweeps three years in succession at the big Wisconsin State Show. My Exhibition Strain of White Rocks are without peer east or west. I can furnish cocks, cks., hens and pullets of exhibition quality at bottom prices and guarantee each and every bird to be satisfactory or you can return them at my expense, and I will cheerfully return your money. Don't buy from the huckster or hot air man, but come direct to headquarters for winners. High-class exhibition birds a specialty.

CARL H. KRIPPENE

OSHKOSH, WISCONSIN

"A LAND OF PURE DELIGHT."

This phrase borrowed from an old hymn perfectly fits the "Old Dominion," Virginia, for its climate, soil and people justify the application.

It is a singular coincidence, too, that in this year, the 300th anniversary of the establishing of the first English colony on American soil at Jamestown, a stronger tide of homeseekers than ever before is setting toward Virginia. These people are of the best class of sturdy, independent, ambitious Americans who appreciate the opportunity here for getting ahead faster than in other sections. They are coming from every quarter of the country, buying small farms and making their homes among these fertile valleys where the "sun shines bright," where there is no winter worth the name, where there are good schools, churches and social advantages for their children.

Detailed information about this wonderful country will be mailed promptly to any reader of this paper who writes to F. H. La Baume, A. & I. Agent, N. & W. Ry, Box M. T., Roanoke, Va.

TO GET MORE EGGS.

The problem of profits from poultry consists very largely of getting a good supply of eggs in the winter months.

Of course cleanliness and proper housing are matters of great importance. After all, the question in reality resolves itself into the matter of feeding. Hens cannot lay unless they have egg producing food. Chemistry, experience and common sense have all shown that no article used as poultry food is so productive of good results both in eggs and in growth and thrift as is fresh cut green bone. Every owner of hens, few or many, should have a good bone cutter.

Humphrey & Sons, Joliet, Ill., are sending out a good, sensible booklet on this subject. It describes not only the Humphrey Open Hopper Bone Cutter, but other articles of the Humphrey line for poultry raisers, including Humphrey's Rapid Clover Cutter, the Humphrey Pure Air Brooder, Humphrey Grit Mortar, Corn Sheller, etc. The book is mailed free. Send for it today. Kindly mention this paper.

DE GRAFF POULTRY FARM, AMSTERDAM, N. Y.

Improvements are being made in every way possible at the De Graff Poultry Farm, Amsterdam, N. Y., as they have just completed one of the finest poultry houses ever built for the purpose of housing and caring for exhibition cockerels, which is getting to be a very important part of their business, and he will now be able to condition fifty males in individual coops that will prevent them from damaging each other in any possible way and deliver to his customers birds in perfect show condition.

He has also just completed a new brooder house in which he is developing his new ideas on contact heat for brooding which he claims is producing great results.

W. H. Gifford, of Auburn, N. Y., will have active management of this farm next year and add his string of famous Black Orpingtons to the large flock of Reds which have made this farm famous all over the poultry world. Mr. Gifford was superintendent of Auburn show and is a very competent poultry man and expert poultry raiser.

Frank Langford, breeder of S. C. R. I. Reds, Box B, R. R. 10, Nashville, Tenn., won at great Jamestown show as follows: First, fourth, sixth cockerels; fourth, sixth pullets; third cock; third hen; special for shape of male; special for color of male; \$25 cup for best S. C. male in class; a total of ten prizes on eight birds.

Kellerstrass Poultry Farm, Kansas City, Mo., report the following winnings at the Jamestown Exposition on their White Orpingtons: First and second cock; first, second, third, fifth cockerel; first, second, third, fourth hen; first, second, third, fourth pullet. Don't fail to write them for prices and particulars and mention American Poultry Journal.

\$17 A HEN PROFIT

WAS MADE LAST YEAR

By one who bought all the feed at market prices and paid rent for land—See page 874 in this paper.

AT HAGERSTOWN, 1907 Remsen's White Wyandottes and B. Minorcas

BREAK the record, winning all firsts and specials in Minorcas; in W. Wyandottes best display by points (more prizes than all my competitors) in competition that equaled and surpassed our large winter shows. Young birds and yearlings that can win.

GREENBERRY FARM POULTRY YARDS,

O. E. Remsen, Proprietor, Box 176B, Annapolis, Md.

Buff Rocks

Have added to my yards the late B. E. Johnson's entire flock that produced winners the past few years at N. Y., Chicago, Hagerstown, St. Louis, Indianapolis and other large shows. Young stock and some choice breeding hens for sale. Show birds a matter of correspondence. Always state your wants. E. L. DELVENTHAL, care Citizen's Bank, Warrenton, Mo. State V.-P. B. Rock Club.

BUFF WYANDOTTES

During the past ten years exhibiting at New York, Boston and Pan-American we have won 31 1sts, 20 2ds and 16 3ds prizes, averaging three 1sts and two 2d prizes each time exhibiting, more than all competitors combined. At N. Y., Jan., 1907, we won 1, 6 ckl., 1 pen, 3, 6 cock, 3, 4, 5 hens, 3 pullet, and the 1 pullet, 2d ckl. we purchased.

MATTISON & DUTCHER

C. S. Mattison, S. Shaftsbury, Vt.

W. WYANDOTTES

MAPLESIDE STRAIN. Were champions at Jamestown, winning special for best shape over North, East, South and West; also 1st pullet and 5th hen on two entries, and leading winners at New York and Boston, 1906-'07. Why not place your order with the man who breeds his own stock. I can sell you either show birds, breeders or utility stock with prices consistent with quality. Write, stating just what you want or come and see me. Illustrated booklet free.

CHAS. NIXON

Box 202, WASHINGTON, N. J.

World's Best Flocks of Wyandottes

In Golden, Silver, Whites and Blacks. We have 2000 head to spare of the finest birds that we ever offered, at reasonable prices. Sure winners of the highest exhibition quality, or the finest breeding birds. We have won more than 300 premiums at Madison Square Garden, N. Y. They have won thousands of premiums for our customers and ourselves at the greatest shows of this country and abroad. If you wish to buy the best you should get them from Keller, the most extensive Wyandotte specialist in the world. Also Golden Sebright Bantams, Scotch Collie dogs and Berkshire hogs from imported champions. Large circular.

IRA. G. KELLER, Brookside Farm, Box 75, Prospect, Ohio.

"Ringlet" Barred Plymouth Rocks

in their purity. At the Wis. State Show, Jan. 1906, our birds won 1st, 2d, 3d and 4th on cocks; we had 5 entered. On cks, we won 1st, 2d and 3d; 1st and 2d exhibition pens; 2d on pullet and 2d and 3d on hens. We have 600 grand birds to offer; if you want birds of the highest quality, we have birds that can win the blue ribbons for you in strongest competition. Don't fail to write us, stating plainly the kind of birds you want. We will save you money. It is a positive fact we sell as good a bird for \$10 as you can buy elsewhere for \$20. We guarantee every sale to please, or refund your money as cheerfully as we take it.

KING BROTHERS

OSHKOSH, WISCONSIN

BUFF ROCKS ONLY

Two hundred young birds for sale. You will want birds that will win for the coming shows, and that will take quality, and my Buffs have the quality. Why? Because they are bred for size, shape, and color, making them winners in the show room, as well as the best of breeding birds. If you want quality write.

A. L. WECKLER

BUNKER HILL, IND.

Rausch's Barred Rocks

Won at St. Louis Show, 1907, first ckl., second cock, third hen, third and fourth pullet. Prize winning stock for sale. Member Plymouth Rock Club and life member American Poultry Association.

Creve Coeur Poultry Farm, Louis Rausch, Prop., Creve Coeur, Mo.

The World's Best Layers PROVED IN PUBLIC COMPETITION

A pen of SIX of my S. C. WHITE LEGHORNS at the Western Australian Laying Competition (under Government supervision) laid 1444 eggs in 12 months, i. e., 249 each, beating 100 pens in that test, and over 900 pens which have competed in other states. I am prepared to land either at VANCOUVER or SAN FRANCISCO trios (cockerel and two pullets) of same stock at \$50.00 per trio. Hundreds to select from. Remember the greatest layers on earth.

NOTE.—I have satisfied the editor of this paper of my good faith and ability to do what I promise. Full particulars mailed on receipt of request. Money Orders payable at my postal address.

W. L. WILLIAMS

CLARENDON, SOUTH AUSTRALIA

BUFF WYANDOTTES

Birds for sale from stock having a record of being PRIZE WINNERS FOR TEN YEARS. A flock of 500 youngsters to select from. Can give you the benefit of my ten years' experience with Buff Wyandottes in fitting you out with anything you want.

W. R. WOODEN :: BATTLE CREEK, MICH.

BARKER'S LIGHT BRAHMAS

CONTINUE TO WIN. At the Jamestown Exposition I made five entries and won five prizes, including first pen, second cock, second hen, fifth cockerel, fifth pullet. Some fine exhibition birds for sale and 100 choice breeding hens.

E. J. BARKER (Successor to I. N. Barker & Son) Thorntown, Ind.

A GOOD HATCHER

is what every poultryman wants, and that is just what the POTTER COMPOUND Incubator is. 90 per cent hatches are not unusual in any climate. Automatic moisture and ventilation, compound circulation of air, compound asbestos heater requires one-third less oil. Not a cheap machine but one perfect in every detail, rightly made and sold at the right price. Your money cannot buy a better hatching machine. Don't buy an incubator or brooder until you learn about the Potter Compound Machine.

The Potter System

of selecting laying and non-laying hens is the greatest discovery of the century in the poultry world. It is a secret worth dollars to any poultryman. It teaches you a dozen different ways of making more money on your hens. You can select the layers from the loafers. You can keep the fewer hens and get more eggs at a less cost. If you have some hens to sell before winter sets in, you should know the Potter System, for you can pick out the layers and sell the non-layers, and thus save many dollars.

Over 15,000 poultrymen are using our system, and if you will write, asking for our catalogue and circular, we will show you that you are losing dollars every day you delay in learning the knowledge we offer. Write us today.

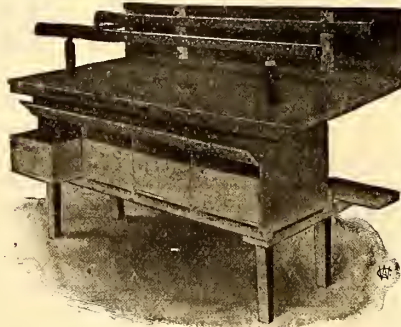

DON'T BUILD

that new hen-house or fix up the old one until you have our large 64-page catalog showing fixtures in all styles and sizes. You can have convenient and sanitary quarters for your fowls, and save time and labor if you will use Potter fixtures. Our catalog has cost us hundreds of dollars, but we send it free to you for the asking.

The best yet in a feed hopper. This is the most sensible, satisfactory and serviceable hopper ever made. Hopper feeding is being adopted by poultry raisers all over the country, because they can save dollars in feed and much time and labor. The Potter Hopper is made in three sizes with movable partitions for either one or five feed compartments. It is the best and most economical hopper ever made.

Send for our circular, "Hopper Feeding." The Potter method of scientific and systematic feeding brings paying results. It tells you how to feed from chicks to laying hens; how to prepare a feed costing less than 12 cents a bushel. This feed is the cheapest and best feed known to produce winter eggs and keep your fowls in a healthy condition. Send for free circular on feeding.

Potter Poultry House Fixtures

Made in three styles, 12 different sizes; over six years on the market and over 20,000 in use by poultrymen all over the United States.

DON'T DELAY a single day in sending for our catalog and circulars telling all about our goods, for we can show you how to save money and make more money on your poultry. Write to us today.

Potter Poultry Products are for particular poultry people.

T. F. POTTER & COMPANY Box A, Downers Grove, Ill.

THE COMMON SENSE POULTRY DOCTOR.

This is the title of a new poultry doctor book just issued from the press of Farm-Poultry, Boston, Mass. The author is Mr. John H. Robinson, editor of Farm-Poultry, well known throughout the poultry world as the author of "Poultry-Craft," "First Lessons in Poultry Keeping," etc., etc. This new addition to poultry literature is a book of 176 pages, size 5½x8 inches, bound in paper covers, and for practical, every day use it is by far the most complete work on the subject ever published. To give the reader some general idea of its contents, it may be mentioned that there are chapters on "General rules for the prevention of diseases," "Colds and diseases that begin with colds," "Diseases due to improper foods and feeding," "Diseases of the reproductive organs," "Diseases of the skin," and others equally important. Chapter IV, for example, devoted to the discussion and tabulation of Symptoms of Disease, introduces into books on this subject a feature of prime value to every poultry keeper. The poultryman has to be his own poultry doctor. Without theoretical or professional knowledge of medicine and surgery, he has to learn to treat sick and injured fowls, so Chapter IV is especially designed to help the non-professional to correctly identify diseases.

This book will be sent postpaid on receipt of 50 cents, or the book and one year's subscription to American Poultry Journal for only 75 cents. This book should be in the hands of every poultry breeder, as it will save many dollars during the year. Send orders direct to American Poultry Journal, 103-113 South Clinton street, Chicago, Ill.

SWIMMING—"THE ONLY WAY."

A tramp has beaten all known records by swimming twenty-seven miles in thirty minutes. He did not mean to do it. He merely tried to steal a ride on the Chicago & Alton from St. Louis to Chicago. He boarded the rear of the locomotive tender. When the train started he fell over backward, through the open manhole, into the water tank.

The noise of the train drowned his cries for help, and he was obliged to swim until the first stop was reached, at Alton. When taken out he was nearly dead, but the engineer was so unfeeling as to call his attention to the fact that the water was only four feet deep and he might have stood up all the way.

The conductor also, unfeelingly, asked him for his ticket, but the tramp said he had not come by rail but by water, and disputed the conductor's claim that the Alton was "The Only Way."

Charles Nixon, Washington, N. J., originator of the Mapleside Strain of White Wyandottes, made a remarkable showing at the Jamestown Exposition, while no finer show of Wyandottes was ever penned in America and represented by north, east, south and west. He selected two females and won first pullet and fifth hen and special for best shaped female. Mr. Nixon is noted for exhibiting a small number of birds and winning the lion's share of the prizes. This is evident that he knows what a Wyandotte is, or surely failure would be the result. It was declared by the leading judges that Mr. Nixon's pullet winning first and shape special was the best Wyandotte female ever exhibited. At New York and Boston, 1906 and 1907, the Mapleside Strain won seven regular and special prizes on five entries, including first hen at Madison Square. We are personally acquainted with Mr. Nixon and will recommend anyone to him who is in need of high class birds. There is no doubt whatever that the Mapleside Strain is one of the very best strains of White Wyandottes in the world.

J. B. Howe, of Kentland, Ind., has changed his location. Being cramped for room at Kentland, Ind., he has sold his property and purchased a farm well adapted for poultry raising at Fortville, Ind., where he will devote all his time to raising White Plymouth Rocks. Address him now at Fortville, Ind., and he will be as ready as ever to attend to all your wants.

Ira C. Keller, Prospect, Ohio, reports another large shipment of his White Wyandottes to South America. The fame of Brook Side Farm is world wide and the stock sent out always gives satisfaction, for it is just as represented. Don't fail to write him for prices and mention American Poultry Journal.

SOME PRACTICAL POULTRY BOOKS.

Poultry Herald, St. Paul, Minn., is advertising in our columns the four books published by its company, namely: "Egg Money," "Chicks," "Poultry Houses, Coops and Equipment," and "Poultry Manual." The first two volumes are this season's products; "Poultry Houses, Coops and Equipment" was first published in 1906; "Poultry Manual" has been on the market several years and over forty thousand copies have been sold. We will describe the two that seem to be the most seasonable this month.

"Egg Money," 128 pages, finely illustrated, is devoted entirely to the more profitable production of eggs for market. It begins with selecting the breeding stock from which the heavy layers are to be produced; describes the methods of incubating, brooding, rearing and developing which make heavy egg production possible; explains the methods of housing and feeding that insure heavy egg yields when the price is high; the use of trap nests, the two-hundred egg hen, the methods of marketing eggs to obtain better prices, and describes successful egg farms and the methods of operating them at a profit.

"Poultry Manual," 168 pages, profusely illustrated, contains a description of the leading standard breeds, with much interesting and instructing matter regarding their breeding, written and illustrated by Franklane L. Sewell. This includes poultry, ducks, geese and turkeys. It also thoroughly covers the so-called practical poultry business, including the practical qualities of different breeds; the best feeds and how to feed them; how to make poultry on the farm and village lot pay better; how to prevent and cure diseases, etc., etc. Look up the ad in this issue.

LOW WHEELS GAINING GROUND.

It is a very noticeable fact that there is a steady increase in the number of broad tired, low wheeled wagons among farmers. There are unquestionably the best of reasons for it. Take such a wagon as that manufactured by the Electric Wheel Company, of Quincy, Ill., and to our way of thinking the arguments are all in favor of its use. First, convenience. It saves a world of needless high lifting. There is absolutely no sense in farmers lifting their loads onto a high wagon instead of a low one. Secondly, in pretty nearly every situation on or about the farm the draft is lighter. That is a reason worth considering. Thirdly, the low wheeled, broad tired wagon does not rut fields or meadows. That is one of the best reasons of all. Fourthly, it is a road maker instead of a road destroyer. Advocates of the good roads movement appreciate the fact. The low, broad tired wagon enters into every one of their arguments.

The Electric Wheel Company with their solid (practically one piece) metal wheels on their famous Handy Wagons have done much to establish a new and better order of things among farmers. They are doing a good work. Let it go on. We feel like seconding the goodly cause. The old fashioned, high wooden wheels with narrow tires which ruin our roads cannot too quickly be set aside for the solid and almost everlasting low Electric. Whether your ideas are the same or not, you will get much interesting information along this line by getting in correspondence with the Electric Wheel Company. Write them for their catalogue, getting correct address from their advertisement running in this paper.

CHANGED THEIR NAME.

It is not very often that a manufacturing concern finds it necessary to change its name for the reason that caused the Pinkerton Manufacturing Company, of Lincoln, Neb., to change theirs. This company are large and well known makers of the Queen incubators and brooders, and it seems that the exceptional merit has made such a deep impression upon their customers that when they write to the company the greater percentage address their letters Queen Incubator Company.

This suggested to the company the advisability of changing the name to the Queen Incubator Company, and from now on it will be known under that name, which we think is a good change for the simple reason that the public has shown it is easier to remember the company by the same name as that of its goods.

In this connection we wish to refer you to their new advertisement in this issue. The remarkable popularity of Queen incubators comes from the fact that they are money makers for their users, and the rea-

son for this is because they are downright practical, successful machines. It will be money in pocket for any of our readers to send for their 100-page Queen Book. The real, helpful, valuable information it contains on hatching, raising, feeding, breeding, etc., is worth dollars to anyone. It also fully describes the Queen machines and tells how hundreds are making from \$130 and up in a season from each Queen incubator run. It is a very interesting book and is sent free if you'll mention this paper.

In a recent letter received from F. W. Corey, manager of the Rock Hill Poultry Farm, Ossining, N. Y., he says: "We have never had as many good birds on our plant as at the present time, and never had them in as good condition to sell. Can supply good breeding stock in large or small quantities at prices that are right, according to

the quality. We made a most remarkable win at Jamestown in some of the strongest classes in the show. Our complete winnings are as follows: On White Plymouth Rocks, second cock, third hen, fourth cockerel, fourth and fifth pullet and second pen; second best display in a class of 175 birds. On Silver Plymouth Rocks, first and second cock, first and second hen, first and second cockerel, first and third pullet and first pen; best display. On White Wyandottes, second and fourth cock, first and fourth hen, second and fourth cockerel, fifth pullet, first, second and fourth pens; best display in a class of 150 birds. On Single Comb White Leghorns, second and third cock, first and fifth hen, first, second and fourth cockerel, first, fourth and sixth pullet, first, second, third and fifth pens; best display in a class of 175 birds. On Buff Cochins Bantams, second cock, second hen, first and second pullet, first and second cockerel and first pen; also best display."

Cheat Your Hens and They Will Cheat You

You can't deny your hens what they absolutely need and then expect plenty of eggs from them. They need more than good feed and good care—they need

Pratts Poultry Regulator

OF PHILADELPHIA, PA.

[For 36 years called Pratts Poultry Food]

This has been demonstrated over and over again to thousands of poultry owners. Increased egg-production and improved health prove its value beyond a doubt.

Read this from one user: "Before using Pratts Poultry Regulator my 32 hens laid in two months 687 eggs. I then gave them Pratts Poultry Regulator daily and the next two months they laid 1030 eggs, and 12 hens were sitting the last month. The weather was cold and unfavorable and I credit all the increase to the use of Pratts Poultry Regulator."

If other regulators have failed, all the more reason you should try Pratts. It never fails—and we can easily prove it to you. Get a package today at your dealer's—be sure you get Pratts—and test it, and if you don't get results you can get your money back. As long as you put off trying it you cheat yourself of extra profits you might have. Get a package at once and try it—we know results will make you enthusiastic.

A GOLDEN BUTTER MINE.

Butter is high price—so says every house-keeper.

And the natural laws of season and pasturage will send it higher—they always do.

Butter demand is growing—constantly.

And demand for best butter is growing more rapidly than for average butter.

Less supply than demand will boost prices. Making better quality butter—the best quality—will push the prices up faster than anything else.

This is the butter situation which today confronts the dairyman.

It's one of the opportunities which come to men, which if embraced lead on to business profits, or if neglected—well, some other fellow gets the profits.

Your dairy, Mr. Dairyman, is a mine, if you please. It's more important to you than the doings of the money centers—and more important, collectively, to the nation.

It's for each dairyman and dairywoman to decide whether and how much they will share in the butter gold mine, or whether they will let go by default the products and profits they may enjoy.

The world's financial centers blow hot plain, smooth bowl separator; one simplest

one separator without bowl contents; one constructed separator—the Tubular. It costs no more to get the best than to buy an inferior "bucket bowl" machine.

The exclusive and invaluable advantages belong to and are held by patents and processes of manufacture for the people who use the Tubular in their dairies.

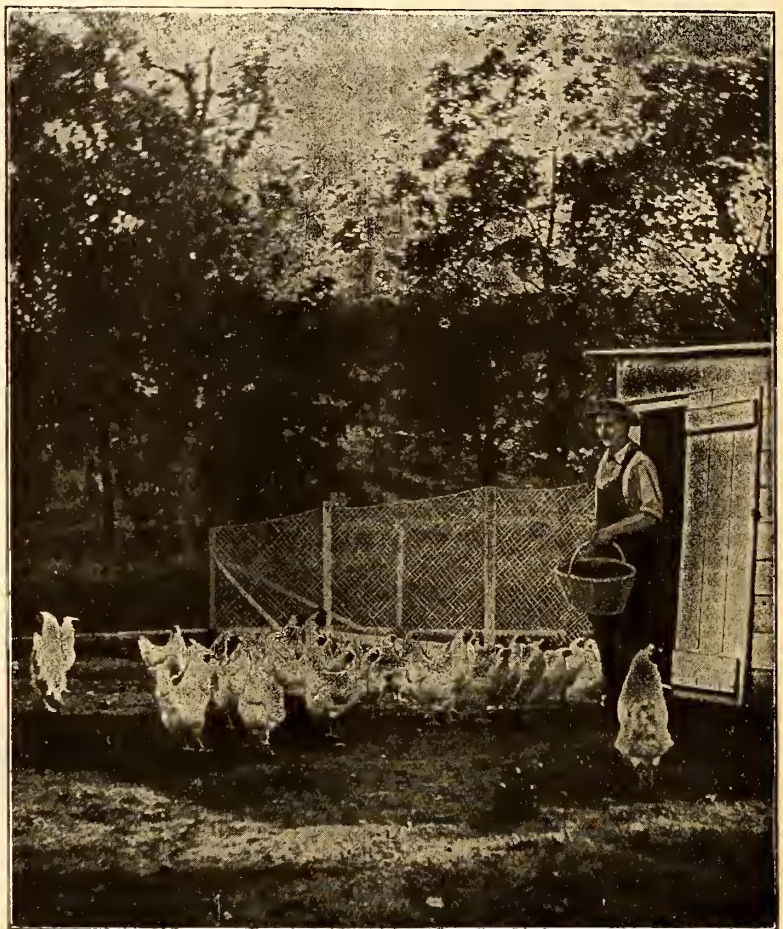

They are facilities and conveniences not to be purchased nor secured in other separators.

By their help the dairyman and dairywoman can equip his or her home dairy to gain a share from the butter gold mine which exists in every community of the United States and which needs only intelligent working to yield rich profits.

Isn't it time for you, Mr. Dairyman, to be thinking of your butter gold mine, right at your home, ready for the working, capable of yielding big and constant rewards, if you only work it properly?

If you think "yes" write to the Sharples Separator Company, West Chester, Pa., for their "Business Dairying" handbook and regular catalogue. Both free, if you mention this paper. Both books will help you in getting ready to gain largest possible profits from the butter gold mine.

Another fact:—In the beginning of the year 1907 the Sharples Separator Company decided to award an upright piano to some

One of the breeding pens on the Kellerstrass Farm, R. F. D. 1, Kansas City, Mo., where the "Crystal White Orpingtons, the Big Winter Lavers, were originated. We will publish views of this poultry farm from month to month; it's one of the world's greatest poultry plants.

and cold, as power and men change places.

The dairies of the country, with the demand for butter from an always increasing population which depends upon them, are a business machine—a butter plant—which can be depended upon for scores of years to come.

Good stock is the first requisite. Nobody questions that.

Next to good stock a centrifugal separator is a necessity—the pan and can raising system of securing butter fat can't keep up.

When it comes to separators there is one different from all others; one XXth century separator; one separator with suspended instead of supported bowl; one oiled automatically yet perfectly lubricated machine;

purchaser of a Tubular separator, who had bought or might buy a Tubular separator during 1907. Time still for you to get in the list of eligible purchasers to one of whom the piano will go.

You can get a Tubular at the regular price, and the dairy help and profit the Tubular stands for. You may get a piano—some 1907 purchaser of a Tubular will get the instrument.

But the upward-tending price of butter, and the certainty of a permanent good price for good quality, are the ample reasons why you should be seeking the world's best centrifugal separator. Inquiring about and getting acquainted with the Tubular, and shaping your dairy business to share in the gains that the world is giving yearly in larger measure for excellent butter.

"HOW TO MAKE POULTRY PAY."

A Valuable Book Telling How to Double Your Egg Production and Cut Your Feed Bills in Half.

When eggs are high you want your hens to lay. How to get as many eggs in winter, when prices soar, as in the spring, when they are low, is the question, then, that confronts every chicken raiser. Poultry experts claim that almost every hen can be made to lay, as increasing egg production is simply a matter of proper feeding, and that the only food to feed is cut green bone.

Everyone who keeps poultry should write to E. C. Stearns & Co., Syracuse, N. Y., and ask for their new free booklet, "How to Make Poultry Pay." This booklet contains a great deal of valuable poultry information and gives special attention to the preparation of egg-making food and instructions on proper feeding.

To prove to every poultryman that cut green bone is the best egg-making food, E. C. Stearns & Co. will send a bone cutter on thirty days' free trial.

If you don't get a great many more eggs, you don't pay for the cutter. Stearns bone cutters have a wide reputation for efficiency. They cut any kind of green bone, meat or gristle easily, rapidly and finely enough for the youngest chicks.

Write today for booklet and full particulars regarding this trial offer.

THE BASIS OF WINTER EGG GETTING.

The problem of winter egg getting comes up regularly every year. Right now the question is on, and a good many people are studying it. It is worthy of all the well directed attention that can be given it. Eggs will sell for high average prices from now on until after Easter. The poultry keeper who has plenty of eggs to sell during this period is going to make some money.

Naturally everybody looks first to the feed. That must be the basis of all egg production. Hens can't lay unless they are fed the materials or ingredients out of which eggs are made. People who have to buy feed will do well to look to some concern that is known to supply foods that are adapted to the use intended.

A firm that has the facilities and the disposition to furnish the right kind of poultry foods; and the reputation for doing it, is that of Darling & Co., at the Union Stock Yards, Chicago, with a house also at Long Island City, N. Y.

Just now they are calling attention to their laying foods in our advertising columns. They do this every year about this time. It is a timely advertisement. We believe that if more poultrymen will get started with the high class foods that Darling & Co. furnish they will find their business on a better paying basis.

This firm has been for a good long time in the business. They know the requirements. Purchasers can be assured that in buying a laying feed from them, or any other feed for that matter, they will not get sweepings, screenings, weed seed, etc.

The best food he had is the best paying food. You will have to pay a fair price for it, but it is worth all it costs. "Pay something and get something" is a far better rule than to look for cheap stuff which will give nothing in return.

This is the time of year when the farmer should give a little extra thought to his stock and make sure that they're properly and warmly housed.

It's an investment to do so.

The nights are sharp and a bad draught may mean the loss of a good many dollars' worth of livestock.

When it costs so little to put a barn or building in good shape it's a mistake to neglect looking out for this.

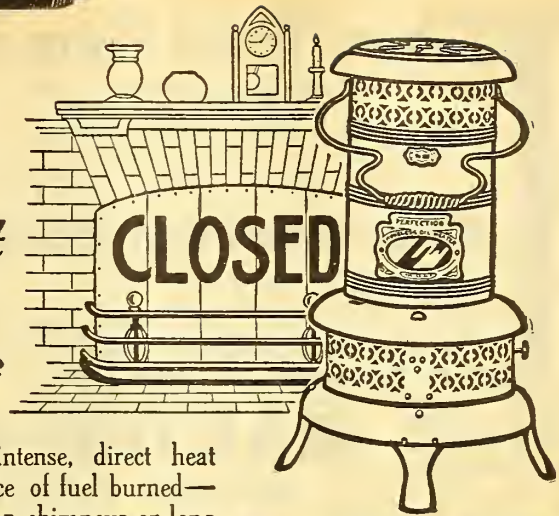

A few rolls of Paroid Roofing will make a snug, warm shelter out of almost any kind of a building. Not only is it used for roofs, but the sides as well.

Some good ideas and suggestions along these lines are found in a little book entitled "Practical Farm Buildings," which gives valuable advice to anyone planning to build or repair.

The publishers, F. W. Bird & Son, of East Walpole, Mass., will be pleased to send a copy to anyone interested in these subjects upon receipt of 4 cents in stamps to pay postage.

W. W. Kulp, Pottstown, Pa., the Leghorn man, reports the following winnings at Allentown, Pa.: On Rose Comb White Leghorns, first cockerel, third hen. Rose Comb Brown Leghorns, first cock, first hen.

SASH, DOOR AND MILLWORK BAR-GAINS.

Write Gordon Van Tine & Co. for Catalogue and Buy Guaranteed Building Material at 50% Saving—Quality and Safe Delivery Guaranteed.

Gordon Van Tine & Co., of Davenport, Iowa, are the largest manufacturers in the world of sash, doors, millwork and building material. Their catalogue tells all about their own timber lands, their own saw mills, their factories, their enormous capacity, their guarantees of quality and safe delivery, and shows why they save 50 per cent over dealers' prices, no matter where you live. They sell by mail order only, and guarantee safe delivery and quality.

To get the benefit of this saving, whether you are a contractor, carpenter or individual user, and whether you want a \$5 or a \$10,000 order; whether you are going to build a handsome home or put storm windows in the old home—first write for the catalogue to Gordon Van Tine & Co., 359 Case street, Davenport, Iowa.

This catalogue is so simple you can order everything by letter and save 50 per cent.

The catalogue is illustrated, and one of the main features is a set of pictures and complete architect's plans for five

houses of moderate cost, which in itself saves many a builder the expense of having plans drawn.

Other features of this catalogue, completely illustrated, are the tables of sizes and prices on front doors, grained doors, painted doors, storm doors, white pine doors, art windows, plain rail windows, storm windows, barn windows, base mouldings, casing, sash, thresholds, lattice, mouldings, hardwood flooring, window screen stock, door frames, window frames, gable, ornaments, colonial columns, turned porch columns and porch newels, stair work, stair newels, porch frames and rails, stair balusters, building paper, step ladders, window glass, glazier's supplies, art glass, etc.

In fact, the Gordon Van Tine & Co. catalogue is such a complete one that it has become a standard reference book in thousands of country homes, to be consulted whenever any building is to be done. Write today and get your order in before prices go up.

Niagara-on-the-Lake, Ontario, Sept. 27, 1907.

To Whom It May Concern:

This is to certify that we have sold to Dr. B. F. Dudding, of Hope, Ind., our entire stock of Black Orpingtons, including "Royal Ormo," winner of first prize at Canadian National Exhibition, 1906, and "Black Knight," winner of first prize at Toronto Winter Show, 1907, and also first at the Canadian National Exhibition, 1907.

W. Dawson.

FARMERS AND HIGH PRICES.

There is a wonderful deal in being ready for a good thing when it comes. Sometimes a farmer misses the high price of the season because his cattle, sheep or hogs were not in market trim at the right moment.

This might have been a fault in the stock, but more likely it was a fault in the farmer, because there are well-established ideas and principles at the bottom of the feeding business which point a sure way to hasten and perfect all animal growth and development.

Ask a successful breeder of cattle or a man who turns off his fat droves once or twice a year, and he will tell you, "My dear sir, it's all in the tonic—you can't fat steers, hogs, sheep or fit a horse for the show ring or for sale without using every day the proper food tonic," and this man's testimony would be just what thou-

Thousands are doing it, as the increased demand for it proves.

There is abundant evidence of the value of this "food tonic" idea in the actual practice of interested parties, but an added force is given by the unqualified indorsement of such men as Professors Winslow, Quitman and Finley Dun—men known everywhere as authorities on such subjects. They tell us that bitter tonics are necessary to strengthen digestion, that iron is the best known blood builder, that nitrates cleanse the system of poisonous matter, and these are the ingredients which enter into the proper "food tonic."

Using a "food tonic," then, becomes a practical farm economy—one of the steps which lead to satisfactory profit.

That it gives great returns is proved by well-attested experiments—in one case the outlay for the "food tonic" being returned with a profit of 235 per cent. In view of this fact we are lead to this conclusion—

"MAC PIERCE."

First prize Light Brahma Cockerel at the great Indianapolis Show in February, 1907. Bred, owned and exhibited by E. J. Barker, Thorntown, Ind.

sands upon thousands of others would say if it were possible to ask them the same question.

It is a well-known fact by every man who owns a domestic animal that heavy feeding is likely to upset the digestion and make the animal "go back." Why this is so is also well known—no animal stomach is sufficiently strong to stand the continual stuffing that is necessary to make a desired weight in a certain time. Hence the feeder is constantly facing a possibility of loss even before he is ready to reap his gain.

Just here a knowledge of the "tonic idea" comes to help the feeder out. It tells him that a "food tonic" given regularly (at small cost) to a steer, cow, horse, hog or sheep which is being fitted for market, will remove the possibility of digestive disorder and by increasing assimilation actually shorten the time necessary to fatten the animal. Every day gained in this way is of course so much on the profit side of the account and well worth considering when the final balance is struck.

These things being so, it is evidently sound business to use the "food tonic."

no man owning live stock, farmer, feeder or breeder, is rich enough to leave the "food tonic" idea out of his calculation when business possibilities are considered.

J. S. Haupt & Co., Easton, Pa., breeders and importers of Buff, Black and White Orpingtons, won as follows: First prize Single Comb Black Orpington hen, first Rose Comb Black Orpington hen, first Rose Comb White Orpington hen, first Rose Comb White Orpington pullet, second Rose Comb White Orpington cockerel, second Rose Comb Buff Orpington hen; four firsts and two seconds on six birds.

Simon Beuth, German Valley, Ill., the noted Buff Wyandotte breeder, made seven entries at the great Jamestown Exposition and won seven prizes. This bears out his claim that he breeds birds that will win. He reports a large number of choice specimens now ready to win in the hottest competition. Write him for particulars and prices and mention American Poultry Journal.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

F. L. WATERMAN & SON - - BARRINGTON, ILL.

One Thing Worth Remembering—Every

Cousins STANDARD Incubator

Is Equipped With Chick-Saving, Labor-Saving

Cousins Automatic Egg-Turning Trays

EVEN if you are not going to buy your new incubator just now, there could be no better time to get the catalogue that tells all about the Cousins Standard Incubator, how it's made and why it is best. At all the big poultry shows in the season past, the Cousins was the incubator sensation. Experienced, successful poultry raisers say it is the climax of development in incubator manufacture, ranking in a class all by itself. Reports from users confirm this. Uniformly it gives best results.

Our Exclusive Patented Features

gives the Cousins Incubator undeniable superiority, automatic and absolutely even distribution of heat, with one-half the usual amount of fuel; perfect ventilation and moisture system; no cold air draughts; chick drawer, through which the chickens are removed without opening the egg chamber; greatest durability; hand-some appearance; and the Cousins Automatic Egg-Turning Tray, which saves work and time, saves the chicks and insures biggest hatches. Write today for our illustrated book. It tells all about the egg-turning tray. Address

COUSINS INCUBATOR CO., 113 Woodard Building, WARREN, PA.

C. E. SPAUGH
Box T, - Rugby, Indiana

YOU CAN MAKE \$13000 in 5 Months from Every Queen Incubator You Run. Others are Doing it Right Now. Ask for Proof. We have lots of it.

Just get a post-card and say on it, "I'd like to know how I can make \$130 in 5 months with a Queen Incubator."

That's enough.

You'll get by return mail, full particulars; and better still, "actual proof" showing how hundreds who are not more experienced than you, are doing it now, and some who are doing even better.

Will you spend a cent to learn how to make dollars instead of dimes in raising chickens?

Will you let us put this "proof" in your hands?

If you will, we'll send you **FREE** our big Queen Book, which contains information on hatching, feeding, breeding, marketing, etc., that's worth dollars to any one interested in poultry raising.

It also describes our Queen Incubators and Brooders. Tells how we can **Guarantee the Queen for 5 years.** Others say 30 to 60 days trial. We don't limit the trial period to such a short time.

You can't tell how profitable your machines have been until the end of

the season, when you can count the chickens you have hatched and raised to maturity. Then you'll know.

We ship Freight Paid to your railroad station so you know exactly what your machine is going to cost you when you order it.

Our prices are low—only \$7.50 to \$19.50, according to size.

When you buy a Queen you don't simply get a machine, you get in addition our help and experience of 20 years' raising poultry and making and selling **80,000 machines.**

We don't sell you a Queen and then drop you. We stay by our customers and help them make the most money.

That's why so many of our customers make so much money. That's why we are able to guarantee our machine 5 years. That's why there are so many thousands of **successful Queen users** in every part of the United States today.

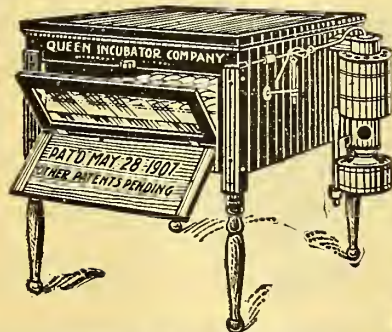

We sell them the right incubator and then help them in the right way to make the biggest success.

Now all we want is an opportunity to show you how we will help you make the most money. Our **Big, Free Queen Book** alone is worth a dollar of anyone's money, yet all it costs is a request on a post-card.

You'll be interested in reading how we make the Queens; how they work; how they please their buyers; how they make money for you; how easy they are to run; why we can guarantee them so long; in fact just why they are the best incubators to buy.

You can't go wrong when you put your money and confidence into Queen machines. You'll regret it if you buy before you get our **Big Free Queen Book.** Send for it right now and make sure.

QUEEN INCUBATOR CO.,
Box 4, LINCOLN, NEB.

The EXCELSIOR and WOODEN HEN INCUBATORS

HATCH CHICKENS BY STEAM

With the Wooden Hen or Excelsior Incubators. Substantially built and thoroughly finished throughout, they solve every problem of ventilation, moisture and heat—practically run themselves and require but five minutes' time daily while in operation. The Wooden Hen and Excelsior Incubators are not only the best and the most economical to operate, but they also hatch the greatest proportion of fertile eggs.

They are sold at a remarkably low price. Send for free catalogue, illustrated in colors, containing full information regarding incubators and Poultry Appliances and price list.

STEINMESCH'S EARLY BREAKFAST Mash

"Something New" Try it and if you like it Buy it. Sample Free

Every authority on poultry recommends a morning mash for poultry, especially during the fall and winter months. Our Mash is made up of the very choicest Winter Wheat Bran, and Middlings, Crushed Oats, Linseed Meal, Bone and Beef Meal, Clover Meal, Charcoal, etc. Nothing better for growing and adult fowls; will push the young stock to quick maturity, will help adults through the moult, insuring health and vigor for both. The greatest egg producer ever offered.

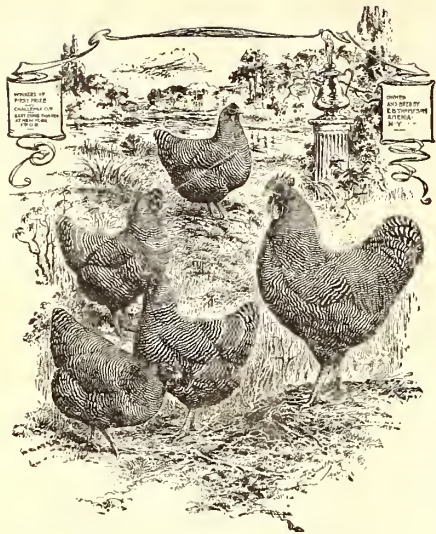

A Forcing Feed, A Fattening Feed, A Conditioning Feed

All in one—simply regulate the quantity fed. Price, \$2.00 for 100 lbs. \$1.25 for 50 lbs. We pay freight on 200 lbs. and over to all parts of the U. S.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won the grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

36 First and Special Prizes at BOSTON and NEW YORK 1907.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned.

At New York, in the strongest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: one setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

Winners at New York, from Life.

A.C. HAWKINS, Lock Box 25 Lancaster, Mass.

First Cockerel at New York.

BUFF WYANDOTTES

THE KIND THAT WIN

At the Great Jamestown Exposition my stock won on seven entries, first pen, first and fifth cockerel, second and fourth pullet, fourth and fifth hen.
